= Cutoff dates for submitting NOTAMs to AJV−21 for next publication. (Twenty−three (23) days before effective date.)

= Effective dates and cutoff dates for submitting information to the Publications Staff, AJV−8 for next publication. (Twenty−eight (28) days before next effective date.)

NOTICES TO AIRMEN

September 14, 2017

Flight Data Center (FDC) NOTAM information current as of August 23, 2017

FDC NOTAMs listed through 7/8815 dated August 23, 2017

Prior to flight, pilots should always check with Flight Service for current NOTAMs (1–800–WX–BRIEF).

TABLE OF CONTENTS

Title	Page
Publication Schedule	v
Subscription Information	vi
Foreword (criteria and procedures for submitting data for publication)	vii
Contractions	x
NOTAM	x
Weather	xii

PART 1. FDC NOTAMs

Section 1. Airway NOTAMs

Airway NOTAMs (listed alphabetically by ARTCC) 1–AN–1

Section 2. Airport, Facility and Procedural NOTAMs

Content Criteria

Airport, Facility, and Procedural NOTAMs (listed alphabetically by state or territory) 1–AFPN–1

Section 3. General NOTAMs

General NOTAMs (listed by NOTAM number, beginning with the most recent) 1–GN–1

PART 2. Part 95 Revisions

Revisions to Minimum En Route IFR Altitudes & Changeover Points 1–IFR–1

Title **Page**

PART 3. International NOTAMs

General 3–INTL–3
International Notices 3–INTL–5
Section 1: Flight Prohibitions, Potentially Hostile Situations, and Foreign Notices 3–INTL–5
Section 2: International Oceanic Airspace Notices 3–INTL–13
General 3–INTL–14
Region Specific 3–INTL–15

PART 4. Graphic Notices

(Notices are listed in categories. **For information on submitting graphic notices for publication, see page viii**.)

Control No.	Category	Page No.
	Section 1. General	
GEN17000	Cold Temperature Restricted Airports	4–GEN–3
GEN17001	Removal of Takeoff Obstacle Notes from Instrument Departure Charts	4–GEN–24

	Northeast United States	
NE10002	Pennsylvania. Special Authorization to Conduct Simultaneous Approaches to Runway 26 and Departures from Runway 27R	4–NE–3
NE05001	Maryland. Baltimore–Washington International Airport Standard Taxi Routes	4–NE–4
NE10001	Massachusetts. KBOS Land & Hold Short Operations	4–NE–5
NE11002	Pennsylvania. Philadelphia International Airport, Runway 35 Arrivals Procedures “Tall Ship” in River Channel	4–NE–6
NE17000	Massachusetts. Prototype Runway Status Lights (RWSL) at Boston Logan International Airport (BOS)	4–NE–8
	Southeast United States	
SE10000	Georgia. Atlanta Preferred Arrival Routes	4–SE–3
SE10001	Georgia. Atlanta TRACON Visual Separation for Aircraft Transitioning between Atlanta ATCT and Atlanta Approach/Departure Control	4–SE–4
SE11004	Georgia. Atlanta Tracon/Atlanta ARTCC/Augusta Approach Control Realignment of Airspace	4–SE–6
SE11005	Georgia. ATL Reduced Divergence Area Navigation (RNAV) Standard Instrument Procedure	4–SE–7

East Central United States

EC08000 Ohio. Cleveland Hopkins International Airport Standard Taxi Route 4–EC–3
EC10000 Michigan. Detroit Metropolitan Wayne County Airport Standard Taxi Routes . . . 4–EC–5
EC14000 Illinois. Midway Airport (MDW) New RNAV Approaches to Runway 22L 4–EC–7
EC15000 Illinois. Chicago O'Hare Runway 10R/28L Opens 4–EC–8

South Central United States

SC09002 Louisiana. Non–Movement Area at Baton Rouge Metropolitan (BTR) Airport . . 4–SC–3
SC11002 Texas. Houston Intercontinental ATC Tower and Houston Tracon Visual Separation Procedures 4–SC–4
SC17000 Texas. Prototype Runway Status Lights (RWSL) at Dallas/Fort Worth International Airport (DFW) 4–SC–5

North Central United States

NC11001 Missouri. Visual Separation Procedures at Lambert–St. Louis 4–NC–3
NC12001 Minnesota. Visual Separation Procedures at Minneapolis ATCT/ARTCC 4–NC–4

Northwest United States

NW03002 Washington. Concurrent Operations to Spokane International Airport and Fairchild Air Force Base 4–NW–3
NW11001 Washington. Seattle Approach Control (S46) Concurrent Operations to Boeing Field (BFI) and Seattle–Tacoma International Airport 4–NW–5

Southwest United States

SW01003 California. Los Angeles Center Limited Radar Services 4–SW–3
SW04001 California. San Francisco SOIA/PRM 4–SW–4
SW10000 Colorado. Denver Standard Taxi Routes 4–SW–5
SW10001 California. Los Angeles (KLAX) Standard Taxi Routes 4–SW–7
SW11002 California. VNY Simultaneous Same Direction Operations 4–SW–8
SW13000 California. San Francisco Int'l Visual Flight Procedures 4–SW–9
SW14000 California. LAX Noise Abatement Procedures 4–SW–11
SW17000 California. LAX Runway Status Lights (RWSLs) 4–SW–12
SW17001 California. Prototype Runway Status Lights (RWSL) at San Diego International Airport (SAN) 4–SW–14
SW17002 California. San Diego International Airport (SAN) Concurrent Operations to Naval Air Station North Island (NZY) 4–SW–15
SW17003 California. Jack Northrop Field/Hawthorne Municipal Airport (HHR) IFR Departures and Los Angeles Airport (LAX) IFR Arrivals 4–SW–16

Alaska and Hawaii

AH01001 Alaska. Anchorage Merrill Field Mode C Intruder Alert Services . . . . . 4–A&H–3
AH01009 Alaska. Lake Hood Seaplane Base Mode C Intruder Alert Services . . . . . 4–A&H–4
AH01010 Alaska. Point Mackenzie Area Mode C Intruder Alert Services . . . . . 4–A&H–5
AH03004 Alaska. Implementation of IFR RNAV Operations Using GPS . . . . . 4–A&H–6
AH06000 Alaska. Line Up and Wait Operations . . . . . 4–A&H–8
AH15000 Alaska. Special Use Airspace – W–22 Oliktok, AK . . . . . 4–A&H–9

Section 4. Major Sporting & Entertainment Events

SP17023 Illinois. NASCAR – Chicagoland Speedway 4–SPORT–3

SP17024	Alabama. NASCAR – Alabama 500	4–SPORT–13
SP17026	Kansas/Missouri. NASCAR – Kansas Speedway	4–SPORT–22
SP17027	Texas. 2017 United States Grand Prix	4–SPORT–26
SP17028	North Carolina. NASCAR – Bank of America 500	4–SPORT–32
SP17029	Delaware. NASCAR – Race at Dover	4–SPORT–34
SP17030	New Hampshire. NASCAR – ISM Connect 300	4–SPORT–36
SP17031	Georgia. Sunbelt Agricultural Exposition	4–SPORT–41
SP17032	Alabama. University of Alabama Football	4–SPORT–43
SP17033	Mississippi. University of Mississippi Football	4–SPORT–48
SP17034	Mississippi. Mississippi State Football	4–SPORT–50

Section 5. Airshows

AIR17000	Various. 2017 Military Aerial Aircraft/Parachute Demo	5–AIR–3
AIR17006	Connecticut. AOPA Fly–In: Groton, CT	N/A

Temporary Flight Restrictions (TFR) and additional NOTAM information are available on the FAA website at http://www.faa.gov

NOTICES TO AIRMEN

Publication Schedule

PARTS 1 AND 2

Information for **Part 1** (FDC NOTAMs) and **Part 2** (Part 95 Revisions) shall be submitted to the **National Flight Data Center, AJV−5,** before the information cutoff dates listed in the chart below. Information, as well as inquiries, should be addressed to:

Address	Category
Federal Aviation Administration National Flight Data Center (AJV−5) 1305 East−West Hwy Silver Spring, MD 20910	Airports & NAVAIDs Airspace & Procedures Part 95 Revisions

Current NOTAMs are available from Flight Service Stations at 1−800−WX−BRIEF. Notices, restrictions, and advisories may change at any time and without notice. Do not attempt any operation in the National Airspace System without first obtaining and understanding a thorough pre−flight briefing.

PARTS 3 AND 4

Information for **Part 3** (International) and **Part 4** (Graphic Notices) shall be submitted electronically to **Air Traffic Procedures (AJV−8),** through the appropriate regional office. Requirements for Graphic Notices are listed on page viii of the Foreword and **must** be submitted well in advance of the event, but not later than 28 days prior to publication (see table below). Changes to submissions cannot be accepted after the cutoff dates. Graphic Notices for special events are published in two editions prior to the event. Information for Parts 3 and 4, as well as inquiries, should be addressed to:

Address	E−Mail	Phone Number
FAA HQ, Mission Support Services **Air Traffic Procedures (AJV−8)** **600 Independence Ave., SW** **Washington, DC 20597**	9−ATOR−HQ−PubGrp@faa.gov	1−202−267−0916

SUBSCRIPTION INFORMATION

This and other selected Air Traffic publications are available online: www.faa.gov/air_traffic/publications

*General Public**	*Government Organizations**
Contact: Superintendent of Documents U.S. Government Printing Office P.O. Box 979050 St. Louis, MO 63197–9000 **Call:** 202–512–1800 **Online:** http://bookstore.gpo.gov	This publication is available on the FAA Website. All Government organizations are responsible for viewing, downloading, and subscribing to receive electronic mail notifications when changes occur to this publication. Electronic subscription information can be obtained by visiting the aforementioned website.
**For those desiring printed copies, current pricing is available on the GPO website at http://bookstore.gpo.gov*	

FOREWORD

NATIONAL AIRSPACE SYSTEM CHANGES

The main references for changes to the National Airspace System (NAS) are the Aeronautical Charts and the Chart Supplements. Most changes to the NAS meeting NOTAM criteria are known sufficiently in advance to be carried in these publications. When this cannot be done, changes are carried in the Notices to Airmen publication (NTAP) and/or the Service A telecommunications system as a NOTAM D item.

NATIONAL FLIGHT DATA CENTER AIRWAY NOTAMS

Flight Data Center (FDC) NOTAMs reflecting airway changes are carried as Center Area NOTAMs (CAN) on the NOTAM(D) circuit. CANs are NOTAMs issued on airway changes that fall within an ARTCC's airspace. CANs are in FDC format and issued by the U.S. NOTAM Office.

NOTAMS IN THE NOTICES TO AIRMEN PUBLICATION

NOTAM D information printed in this publication is **NOT** included on the Service A circuit.

FDC NOTAMs reflect changes to Standard Instrument Approach Procedures (SIAPs), flight restrictions, and aeronautical chart revisions. The date and number of the last FDC NOTAM included in this issue is indicated on the Table of Contents page. This ensures that FDC NOTAMs issued after the NTAP cutoff date can be identified.

PART 1. PUBLICATION CRITERIA

Section 1. Airway NOTAMs. NOTAMs are sorted alphabetically by ARTCC and in descending FDC NOTAM numerical order.

Section 2. Airport, Facility and Procedural NOTAMs. Categories may include Chart Corrections, Airports, Facilities, Procedural NOTAMs, and others, as required.

NOTAMs in section 2 are sorted alphabetically by state, city, airport name and in descending NOTAM numerical order.

Section 3. General NOTAMs. Contains NOTAMs that are general in nature and not tied to a specific airport/facility identifier; i.e., flight advisories and restrictions. NOTAMs in section 3 are sorted by descending NOTAM numerical order.

NOTAM information of a **temporary** nature is not expected to remain current for an extended period and is carried until expiration or cancellation. NOTAMs of a **permanent** nature are carried until published on the proper charts or in the Chart Supplements.

The Notices to Airmen publication is issued every 28 days. Data in this publication which is current on the effective date of the next Chart Supplement will be transferred to the supplements and removed from this publication.

Facilities are responsible for forwarding NOTAM information to be included in Part One to the National Flight Data Center (NFDC).

FDC NOTAM LEGEND	
Code	Explanation
0/777	Accountability number assigned to the message originator.
FI/T	Flight information of a temporary nature.
FI/P	Flight information of a permanent nature.

PART 2. PUBLICATION CRITERIA

Revisions to Part 95 of the Code of Federal Regulations – Minimum En Route IFR Altitudes and Changeover Points are published four (4) weeks prior to the 56–day IFR chart cycle.

The revisions will remain in the NTAP until four (4) weeks prior to the next IFR chart 56–day cycle. (IFR 56–day cycle dates are published in the AFD in the General Information Section under Effective Date.)

The consolidation of Part 95 Altitudes will continue to be published as a separate document.

PART 3. INTERNATIONAL NOTICES TO AIRMEN

The International Notices to Airmen feature significant international information and data which may affect a pilot's decision to enter or use areas of foreign or international airspace. Each issuance of this Part is complete in itself. Temporary data will be repeated in each issue until the condition ceases to exist. Permanent data will be carried until it is sufficiently published or is available in other permanent sources. New items will be indicated by a black bar running in the left or right margin.

The information in Part 3 is divided into two sections. Section 1, Flight Prohibitions, Potentially Hostile Situations, and Foreign Notices is arranged alphabetically by country. Section 2, International Oceanic Airspace Notices, is divided into two sections, general and region specific.

Any notice submitted for inclusion must include the following information at the end of the notice: submitting office and date of the revision (e.g., AJV–81, 2/2/2017). In addition, all electronic mail submissions to 9–ATOR–HQ–PubGrp@faa.gov should specify a time frame in which to expect the removal of the notice from the publication. Submitting offices should notify AJV–8 when notices are no longer needed in the publication.

PART 4. GRAPHIC NOTICES

This section contains special notices and notices containing graphics pertaining to almost every aspect of aviation, such as military training areas, large scale sporting events that may attract media attention or draw large crowds of aircraft, air show information, and airport–specific information.

Data in this section is updated continuously. All submissions for inclusion in this section must have regional office approval and be submitted to AJV–8 through the regional office.

Notices for events requiring Special Traffic Management Programs (STMP) should be coordinated following the procedures in FAA Order JO 7210.3, Facility Operation and Administration.

Submissions should be sent to AJV–8 well in advance of but **no later than 28 days prior to** the effective date of the Notices to Airmen edition to ensure adequate lead time for inclusion in the publication.

Notices to Airmen (NOTAMS) submitted for inclusion in the NTAP are published **no earlier than two publication cycles (56 day periods) prior to the cycle in which the NOTAM becomes effective.** Special NOTAMS capture special events, like the Super Bowl, and are generally published in the NTAP for two consecutive publication cycles. NOTAMS that are more permanent in nature are posted in the NTAP until transferred to other appropriate Air Traffic Publications.

With the exception of dated special events, any notice submitted for inclusion must include the following information at the end of the notice: submitting office and date of the revision (e.g., AJV−81, 2/2/2017). In addition, all electronic mail submissions should specify a time frame in which to expect the removal of the notice from the publication. Regional offices should notify AJV−8 when notices are no longer needed in the publication.

Text files should be submitted as Word documents. Any graphics submitted for inclusion must be of high quality and in camera ready form; *FAX copies will not be accepted.* Electronic mail submissions are required and should be addressed to 9−ATOR−HQ−PubGrp@faa.gov. Graphics should be submitted in one of the following formats: GIF, JPEG, TIFF, BMP, or PDF. Please do not submit graphics with a ".doc" file extension. Each graphic must be submitted as a separate attachment. Graphic notices may be submitted in color or black and white. Avoid using white text in any graphic. Copyrighted materials, such as maps, should not be submitted for publication without written permission of the copyright owner.

PART 5. SPECIAL TEMPORARY FLIGHT RESTRICTIONS/PROHIBITED AREAS AROUND THE WASHINGTON, DC, THURMONT, MD, AND CRAWFORD, TX, AREAS

Effective with the November 27, 2003, edition, this part was removed from the publication. For information on flight restrictions, pilots are directed to the FAA website at http://www.faa.gov. Pilots may also call flight service at 1−800−WX−BRIEF.

TIME REFERENCES

All time references are indicated as UTC or local. During periods of Daylight Saving Time, effective hours in local time will be one hour earlier than shown. All states observe Daylight Savings Time except Arizona, Hawaii, Puerto Rico, and the Virgin Islands.

NEW INFORMATION

In Part 1, new NOTAMs are shown in shaded text. In all other sections of the book, vertical lines in the outside margin indicate new or revised information.

INTERNET

The entire Notices to Airmen publication is published on the internet at the following address: http://www.faa.gov/air_traffic/publications/notices/

There are two copies of the NTAP on the Web site, the current version and the previous version. This is done to overlay any current NOTAMs and information that may be needed.

In the Web version, revised/updated items are shown in blue−colored text.

ERROR OR OBSOLETE DATA NOTIFICATION

Notification of erroneous or obsolete data should be directed to the Federal Aviation Administration, Air Traffic Procedures, AJV−81, 800 Independence Avenue, SW, Washington, DC 20591, or via e−mail at 9−ATOR−HQ−PubGrp@faa.gov.

CONTRACTIONS

NOTAM CONTRACTIONS

This list contains most of the commonly used contractions currently in use in Notices to Airmen (NOTAMS) and the standard aviation weather products, such as METAR/TAF, area forecasts, SIGMETs, AIRMETs, etc.

Contraction	*Decode*
A	
ABN	Aerodrome Beacon
ABV	Above
ACFT	Aircraft
ACT	Active or Activated or Activity
AD	Aerodrome
ADJ	Adjacent
AGL	Above ground level
ALS	Approach Light System
ALT	Altitude
ALTN	Alternate
AP	Airport
APCH	Approach
APP	Approach control or Approach Control Office
ARR	Arrival or Arrive
ASPH	Asphalt
ATC	Air Traffic Control
ATIS	Automatic Terminal Information Service
AUTH	Authority
AVBL	Available
AWY	Airway
AZM	Azimuth
B	
BA GOOD	Braking action good
BA GOOD TO MEDIUM	Braking action good to medium
BA MEDIUM	Braking action medium
BA MEDIUM TO POOR	Braking action medium to poor
BA NIL	Braking action nil
BC	Back Course

FDC 7/4319 FDC PART 1 OF 3 SECURITY SPECIAL SECURITY INSTRUCTIONS FOR SELECT SPORTING EVENTS. THIS NOTAM REPLACES FDC NOTAM 4/3621 TO CLARIFY ATC AUTHORIZATION OF TRANSITING FLIGHTS. THIS NOTAM IMPLEMENTS SECTION 352 OF PUBLIC LAW 108-7 AS AMENDED BY SECTION 521 OF PUBLIC LAW 108-199. PURSUANT TO 49 USC 40103(B)(3), THE FAA CLASSIFIES THE AIRSPACE DEFINED IN THIS NOTAM AS 'NATIONAL DEFENSE AIRSPACE'. ANY PERSON WHO KNOWINGLY OR WILLFULLY VIOLATES THE RULES PERTAINING TO OPERATIONS IN THIS AIRSPACE MAY BE SUBJECT TO CERTAIN CRIMINAL PENALTIES UNDER 49 USC 46307. PILOTS WHO DO NOT ADHERE TO THE FOLLOWING PROCEDURES MAY BE INTERCEPTED, DETAINED AND INTERVIEWED BY LAW ENFORCEMENT/SECURITY PERSONNEL. PURSUANT TO TITLE 14 CFR SECTION 99.7, SPECIAL SECURITY INSTRUCTIONS, ALL AIRCRAFT OPERATIONS ARE PROHIBITED EXCEPT AS SPECIFIED BELOW WITHIN AN AREA DEFINED AS: 3 NMR OF A QUALIFYING STADIUM OR OTHER SPORTING VENUE HOSTING A QUALIFYING EVENT UP TO AND INCLUDING 3000FT AGL. QUALIFYING LOCATIONS AND EVENTS ARE DEFINED AS ANY STADIUM OR OTHER SPORTING VENUE HAVING A SEATING CAPACITY OF 30,000 OR MORE WHERE: 1) A REGULAR OR POST SEASON MAJOR LEAGUE BASEBALL, NATIONAL FOOTBALL 1707201400-PERM END PART 1 OF 3

FDC 7/4319 FDC PART 2 OF 3 SECURITY SPECIAL SECURITY INSTRUCTIONS FOR SELECT LEAGUE, OR NCAA DIVISION ONE FOOTBALL GAME IS OCCURRING; OR 2) A NASCAR CUP, INDY CAR, OR CHAMP SERIES RACE IS OCCURRING, EXCLUDING QUALIFYING AND PRE-RACE EVENTS. THIS FLIGHT PROHIBITION IS IN EFFECT ONE HOUR BEFORE THE SCHEDULED START UNTIL ONE HOUR AFTER THE END OF A QUALIFYING EVENT. THIS FLIGHT PROHIBITION APPLIES TO ALL AIRCRAFT OPERATIONS (INCLUDING TRAINING, PARACHUTE JUMPING, AND UNMANNED AIRCRAFT SYSTEMS - INCLUDING MODEL AIRCRAFT FLIGHTS) UNLESS THE AIRCRAFT OPERATOR MEETS AT LEAST ONE OF THE FOLLOWING REQUIREMENTS: A) THE AIRCRAFT OPERATION HAS BEEN AUTHORIZED BY ATC FOR OPERATIONAL OR SAFETY PURPOSES, INCLUDING AUTHORIZATION OF FLIGHTS SPECIFICALLY ARRIVING AT OR DEPARTING FROM AN AIRPORT DESIGNATED BY ATC USING STANDARD ATC PROCEDURES AND ROUTES; B) THE AIRCRAFT OPERATION IS BEING CONDUCTED FOR OPERATIONAL, SAFETY, OR SECURITY PURPOSES SUPPORTING THE QUALIFYING EVENT, AND IS AUTHORIZED BY AN AIRSPACE SECURITY WAIVER APPROVED BY THE FAA; C) THE AIRCRAFT OPERATION IS ENABLING BROADCAST COVERAGE FOR THE BROADCAST RIGHTS HOLDER FOR THE QUALIFYING EVENT, AND IS AUTHORIZED BY AN AIRSPACE SECURITY WAIVER APPROVED BY THE FAA; 1707201400-PERM END PART 2 OF 3

FDC 7/4319 FDC PART 3 OF 3 SECURITY SPECIAL SECURITY INSTRUCTIONS FOR SELECT D) THE AIRCRAFT OPERATION HAS BEEN AUTHORIZED BY ATC FOR NATIONAL SECURITY, HOMELAND SECURITY, LAW ENFORCEMENT, OR AIR AMBULANCE PURPOSES; PILOTS OPERATING IN THE DEFINED AIRSPACE ARE REMINDED THAT AN FAA AIRSPACE SECURITY WAIVER DOES NOT RELIEVE OPERATORS FROM OBTAINING ALL OTHER NECESSARY AUTHORIZATIONS, INCLUDING THOSE SPECIFIC TO FLIGHTS OVER EVENTS HELD IN STADIUMS AND OTHER SPORTING VENUES, AND COMPLYING WITH ALL APPLICABLE FEDERAL AVIATION REGULATIONS. PILOTS MUST CONTINUOUSLY SQUAWK AN ATC-ASSIGNED BEACON CODE AND MAINTAIN 2- WAY RADIO CONTACT WITH ATC WHILE OPERATING IN THE DEFINED AIRSPACE. ALL PREVIOUSLY ISSUED WAIVERS TO FDC NOTAM 4/3621 REMAIN VALID UNTIL THE SPECIFIED END DATE BUT NOT TO EXCEED 90 DAYS FOLLOWING THE EFFECTIVE DATE OF THIS NOTAM. INFORMATION ABOUT AIRSPACE SECURITY WAIVER APPLICATIONS AND TSA SECURITY AUTHORIZATIONS CAN BE FOUND AT HTTP://WWW.TSA.GOV/STAKEHOLDERS/AIRSPACE-WAIVERS-0 OR BY CALLING TSA AT 571-227-2071. FDC 2/2422 FDC PART 1 OF 2 SPECIAL ADVISORY NOTICE. A WARNING SIGNAL FOR COMMUNICATING WITH AIRCRAFT IS DEPLOYED AND IS OPERATING WITHIN THE WASHINGTON DC SPECIAL FLIGHT RULES AREA (SFRA), INCLUDING THE FLIGHT RESTRICTED ZONE (FRZ). THE SIGNAL CONSISTS OF HIGHLY FOCUSED RED AND GREEN COLORED LIGHTS IN AN ALTERNATING RED/RED/GREEN SIGNAL PATTERN. THIS SIGNAL MAY BE DIRECTED AT SPECIFIC AIRCRAFT SUSPECTED OF MAKING UNAUTHORIZED ENTRY INTO THE SFRA/FRZ AND ARE ON A HEADING OR FLIGHT PATH THAT MAY BE INTERPRETED AS A THREAT OR AT THE REQUEST OF THE FAA. THE BEAM IS NOT INJURIOUS TO THE EYES OF PILOTS/AIRCREWS OR PASSENGERS, REGARDLESS OF ALTITUDE OR DISTANCE FROM THE SOURCE. IF YOU ARE IN COMMUNICATION WITH AIR TRAFFIC CONTROL AND THIS SIGNAL IS DIRECTED AT YOUR AIRCRAFT, WE ADVISE YOU TO IMMEDIATELY COMMUNICATE WITH ATC THAT YOU ARE BEING ILLUMINATED BY A VISUAL WARNING SIGNAL. IF THIS SIGNAL IS DIRECTED AT YOU AND YOU ARE NOT COMMUNICATING WITH ATC, WE ADVISE YOU TO TURN TO A HEADING AWAY FROM THE CENTER OF THE FRZ/SFRA AS SOON AS POSSIBLE AND IMMEDIATELY CONTACT ATC ON AN APPROPRIATE FREQUENCY, OR IF UNSURE OF THE FREQUENCY, CONTACT ATC ON VHF GUARD 121.5 OR UHF GUARD 243.0. BE ADVISED THAT FAILURE TO FOLLOW THE RECOMMENDED PROCEDURES OUTLINED ABOVE MAY RESULT IN INTERCEPTION BY MILITARY AIRCRAFT AND/OR THE USE OF FORCE. END PART 1 OF 2

FDC 2/2422 FDC PART 2 OF 2 SPECIAL ADVISORY NOTICE. THIS NOTICE ONLY APPLIES TO VFR AIRCRAFT OPERATING WITHIN THE SFRA/FRZ, INCLUDING DOD, LAW ENFORCEMENT, AND AEROMEDICAL OPERATIONS. THIS NOTICE DOES NOT CHANGE PROCEDURES ESTABLISHED FOR REPORTING UNAUTHORIZED LASER ILLUMINATION AS PUBLISHED IN ADVISORY CIRCULAR 70-2. "THIS SIGNAL MAY BE DIRECTED AT SPECIFIC AIRCRAFT SUSPECTED OF MAKING UNAUTHORIZED ENTRY INTO THE SFRA/FRZ AND ARE ON A HEADING OR FLIGHT PATH THAT MAY BE INTERPRETED AS A THREAT OR THAT OPERATE CONTRARY TO THE OPERATING RULES FOR THE SFRA/FRZ". END PART 2 OF 2

FDC 1/1155 ZDC DC .. FLIGHT RESTRICTIONS, WASHINGTON, DC. EFFECTIVE 1101102040 UTC UNTIL FURTHER NOTICE. THIS NOTICE WILL REPLACE NOTAM 0/9463 DUE TO TECHNICAL ERROR, NO CHANGES IN RESTRICTIONS. PURSUANT TO TITLE 14 CFR SECTION 99.7, SPECIAL SECURITY INSTRUCTIONS. A. EXCEPT FOR FAA APPROVED DOD, LAW ENFORCEMENT, AND WAIVERED LIFEGUARD/AIR AMBULANCE FLIGHTS, ALL VFR AIRCRAFT OPERATIONS WITHIN 30NM OF 385134N/0770211W OR THE WASHINGTON /DCA/ VOR/DME, FROM THE SURFACE UP TO BUT NOT INCLUDING FL180, ARE RESTRICTED TO AN INDICATED AIRSPEED OF 180 KNOTS OR LESS, IF CAPABLE. IF UNABLE, THE PILOT MUST CONTACT THE APPROPRIATE ATC FACILITY AND ADVISE THEM OF THE AIRCRAFT'S OPERATIONAL LIMITATIONS. B. ALL VFR AIRCRAFT OPERATIONS WITHIN THE AIRSPACE BETWEEN 30 NMR AND 60 NMR OF 385134N/0770211W OR THE WASHINGTON /DCA/ VOR/DME, FROM THE SURFACE UP TO BUT NOT INCLUDING FL180, ARE RESTRICTED TO AN INDICATED AIRSPEED OF 230 KNOTS OR LESS, IF CAPABLE. IF UNABLE THE PILOT MUST CONTACT THE APPROPRIATE ATC FACILITY AND ADVISE THEM OF THE AIRCRAFT'S OPERATIONAL LIMITATIONS PRIOR TO ENTERING THE 60 NMR OF THE WASHINGTON /DCA/ VOR/DME.

FDC 8/2435 FDC ... SPECIAL NOTICE ... PILOTS ARE REMINDED THAT THERE ARE INCREASED SECURITY MEASURES IN PLACE FOR AIRCRAFT ENTERING DOMESTIC AIRSPACE, INCLUDING THOSE ENTERING FLORIDA COASTAL WATERS. ALL PILOTS OF VFR AIRCRAFT ARE REQUIRED TO FILE A DEFENSE VISUAL FLIGHT RULES (DVFR) FLIGHT PLAN PRIOR TO ENTRY INTO THE AIR DEFENSE IDENTIFICATION ZONE(ADIZ)IN ACCORDANCE WITH CFR 99 TITLE 14 CHAPTER 1 PART 99 SECURITY CONTROL OF AIR TRAFFIC, SECTIONS 99.1 THROUGH 99.49. THE PILOT MUST ACTIVATE THE DVFR FLIGHT PLAN WITH U.S. FLIGHT SERVICE AND SET THE AIRCRAFT TRANSPONDER TO THE ASSIGNED DISCRETE BEACON CODE PRIOR TO ENTERING THE ADIZ. FAILURE TO COMPLY WITH ALL DVFR PROCEDURES MAY RESULT IN THE AIRCRAFT BEING INTERCEPTED BY DEPARTMENT OF DEFENSE AIRCRAFT.

FDC 4/4386 FDC SPECIAL NOTICE... NATIONAL AIRSPACE SYSTEM INTERCEPT PROCEDURES. AVIATORS SHALL REVIEW THE FEDERAL AVIATION ADMINISTRATION AERONAUTICAL INFORMATION MANUAL (AIM) FOR INTERCEPTION PROCEDURES, CHAPTER 5, SECTION 6, PARAGRAPH 5-6-2. ALL AIRCRAFT OPERATING IN UNITED STATES NATIONAL AIRSPACE, IF CAPABLE, SHALL MAINTAIN A LISTENING WATCH ON VHF GUARD

121.5 OR UHF 243.0. IF AN AIRCRAFT IS INTERCEPTED BY U.S. MILITARY AIRCRAFT AND FLARES ARE DISPENSED, THE FOLLOWING PROCEDURES ARE TO BE FOLLOWED: FOLLOW THE INTERCEPT'S VISUAL SIGNALS, CONTACT AIR TRAFFIC CONTROL IMMEDIATELY ON THE LOCAL FREQUENCY OR ON VHF GUARD 121.5 OR UHF GUARD 243.0, AND COMPLY WITH THE INSTRUCTIONS GIVEN BY THE INTERCEPTING AIRCRAFT INCLUDING VISUAL SIGNALS IF UNABLE RADIO CONTACT. BE ADVISED THAT NONCOMPLIANCE MAY RESULT IN THE USE OF FORCE.

Part 2.

REVISIONS TO MINIMUM ENROUTE

IFR ALTITUDES & CHANGEOVER POINTS

[4910-13]

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 95

[Docket No. 31147; Amdt. No. 534]

IFR Altitudes; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule

SUMMARY: This amendment adopts miscellaneous amendments to the required IFR (instrument flight rules) altitudes and changeover points for certain Federal airways, jet routes, or direct routes for which a minimum or maximum en route authorized IFR altitude is prescribed. This regulatory action is needed because of changes occurring in the National Airspace System. These changes are designed to provide for the safe and efficient use of the navigable airspace under instrument conditions in the affected areas.

EFFECTIVE DATE: 0901 UTC, **August 17, 2017.**

FOR FURTHER INFORMATION CONTACT: Thomas J Nichols, Flight Procedure Standards Branch (AMCAFS-420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd. Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK. 73125) telephone: (405) 954-4164.

SUPPLEMENTARY INFORMATION: This amendment to part 95 of the Federal Aviation Regulations (14 CFR part 95) amends, suspends, or revokes IFR altitudes governing the operation of all aircraft in flight over a specified route or any portion of that route, as well as the changeover points (COPs) for Federal airways, jet routes, or direct routes as prescribed in part 95.

THE RULE

The specified IFR altitudes, when used in conjunction with the prescribed changeover points for those routes, ensure navigation aid coverage that is adequate for safe flight operations and free of frequency interference. The reasons and circumstances that create the need for this amendment involve matters of flight safety and operational efficiency in the National Airspace System, are related to published aeronautical charts that are essential to the user, and provide for the safe and efficient use of the navigable airspace. In addition, those various reasons or circumstances require making this amendment effective before the next scheduled charting and publication date of the flight information to assure its timely availability to the user. The effective date of this amendment reflects those considerations. In view of the close and immediate relationship between these regulatory changes and safety in air commerce, I find that notice and public procedure before adopting this amendment are impracticable and contrary to the public interest and that good cause exists for making the amendment effective in less than 30 days.

CONCLUSION

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore--(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 95 Airspace, Navigation (air). Issued in Washington, D.C. on **July 14, 2017.**

John Duncan
Director, Flight Standards Service

ADOPTION OF THE AMENDMENT

Accordingly, pursuant to the authority delegated to me by the Administrator, part 95 of the Federal Aviation Regulations (14 CFR part 95) is amended as follows effective at 0901 UTC, **August 17, 2017**.

1. The authority citation for part 95 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44719, 44721.

2. Part 95 is amended to read as follows:

Part 3

INTERNATIONAL NOTICES TO AIRMEN

GENERAL

This section features significant international notices to airmen (NOTAM) information and special notices. These may affect a pilot's decision to enter or use areas of foreign or international airspace. This publication complements and expands data carried in the International Flight Information Manual (IFIM) which is available at http://www.faa.gov/air_traffic/publications/ifim/ on the internet.

Pilots should review the foreign airspace and entry restrictions published in the IFIM during the flight planning process. Foreign airspace penetration without official authorization can involve extreme danger to the aircraft and the imposition of severe penalties and inconvenience on both passengers and crew. A flight plan on file with ATC authorities does not necessarily constitute the prior permission required by certain authorities. The possibility of fatal consequences cannot be ignored in some areas of the world.

The information contained in the International Notices to Airmen section is derived from international notices and other official sources. International notices are of two types: Class One International Notices are those NOTAMs issued via telecommunications. They are made available to the U.S. flying public by the International NOTAM Office (Washington, DC) through the local Flight Service Station (FSS). Class Two International Notices are NOTAMs issued via postal services and are not readily available to the U.S. flying public. The International Notices to Airmen draws from both these sources and also includes information about temporary hazardous conditions which are not otherwise readily available to the flyer. Before any international flight, always update the International Notices to Airmen with a review of Class One International Notices available at your closest FSS.

Foreign notices carried in this publication are carried as issued to the maximum extent possible. Most abbreviations used in this publication are listed in ICAO Document DOC 8400. Wherever possible, the source of the information is included at the end of an entry. This allows the user to confirm the currency of the information with the originator. (See the IFIM for foreign NOTAM areas of responsibility and for a listing of foreign NOTAM offices which exchange information with the U.S. International NOTAM Office.)

International Information Source Code Table

Code	*Information Source*
I or II (followed by the NOTAM number)	Class One or Class Two NOTAMs
AIP	Aeronautical Information Publication (followed by the AIP change number)
AIC	Aeronautical Information Circular (followed by the AIC number)
DOS	Department of State advisories
FAA	Federal Aviation Administration.

The International Notices to Airmen section gives world wide coverage in each issue. Coverage for the U.S. and its external territories is limited and normally will not include data available on the domestic NOTAM circuit or published in other official sources available to the user.

Each issue of this section is complete in itself. Temporary data will be repeated in each issue until the condition ceases to exist. Permanent data will be carried until it is sufficiently published or is available in other permanent sources. New items will be indicated by a black bar running in the left or right margin.

This section includes data issued by foreign governments. The publication of this data in no way constitutes legal recognition of the validity of the data. This publication does not presume to tabulate all NOTAM data, although every effort is made to publish all pertinent data. The Federal Aviation Administration does not assume liability for failure to publish, or the accuracy of, any particular item.

INTERNATIONAL NOTICES TO AIRMEN

SECTION 1

Flight Prohibitions, Potentially Hostile Situations, and Foreign Notices

Introduction: This part contains FAA−issued flight prohibitions for countries and territories outside the United States, advisory notices on potentially hostile situations abroad, and notices issued by foreign governments and civil aviation authorities.

For more information on flight prohibitions and potentially hostile situations, please check the International Flight Information Manual, U.S. Prohibitions, Restrictions and Notices, available on the FAA Web site at

http://www.faa.gov/air_traffic/publications/ifim/us_restrictions

All operators also should check the latest U.S. Department of State Travel Warnings and Public Announcements at http://travel.state.gov, and can obtain additional information by contacting the appropriate foreign government authorities.

BAHAMAS, THE

Communication Procedures for Aircraft Operations Within the Nassau and Grand Bahama Terminal Control Areas (TMAS')

Effective immediately, all aircraft operating or about to operate (IFR, VFR, including military unless specifically exempted, etc.) within the Nassau and Grand Bahama TMAS' and within a 50 nautical mile radius of Nassau and Freeport Int'l airports SHALL report, as a minimum, to the respective Approach Control Unit as follows:

a. Their identification.
b. Aircraft type.
c. Position.
d. Direction of flight.
e. Cruising level.

These reports shall enable the respective approach control unit to provide a more effective advisory service to possible conflicting flights, controlled and uncontrolled within the TMAS'.

Pilots shall contact the appropriate approach control unit as follows:

a. "Nassau Approach" on frequency 121.0 MHz.
b. "Freeport Approach" on frequency 126.5 MHz.

(Bahamas AIC 2/20/2010)

COMMONWEALTH OF INDEPENDENT STATES (CIS)

Special Notice: Provideniya Bay Airport, CIS.

In accordance with Federal Aviation Administration (FAA) Order 8260.31B, The Alaska Region is modifying the arrival and departure minimums for Provideniya Bay Airport, CIS.

Provideniya Bay PAR+2 NDB RWY 01 Visual RWY 19:

Approach visibility minimums are 9 km (9000 meters) IFR or VFR.

Departure minimums IFR or VFR:

RWY 01 ceiling 750 meters, visibility 5 km (5000 meters)

RWY 19 ceiling 300 meters, visibility 1.5 km (1500 meters)

NOTE−
NDB minimums apply when using PAR (VIS 9 KM/9000 METERS).

(FAA/AAL−200 2/22/2010)

CHINA

Federal Aviation Administration (FAA) Flight Routing Authorization Requirements in United States Territorial Airspace

All aircraft with China registrations beginning with B; aircraft using the ICAO designator of a China company; or aircraft used for China diplomatic flights require FAA routing authorization for flights in United States Territorial Airspace, unless the aircraft is registered in Hong Kong, Macau, or Taiwan, or the aircraft is operated by a company with FAA Part 129 operations specifications.

Only IFR flights are eligible for FAA routing authorization. See current FAA KFDC NOTAMS for other requirements and information regarding Aircraft that Operate To or From or Within or Transit Territorial Airspace of the United States (US).

FAA routing authorization is in addition to any US State Department (DOS) diplomatic clearance or US Transportation Security Administration (TSA) waiver. To obtain FAA routing authorization, contact the FAA System Operations Support Center at 9-ATOR-HQ-RT-REQ@faa.gov or FAX 202-267-5289 (Attention FAA SOSC), or call 202-267-8115.

Provide the following information:

1. Name and address of company or individual. Include a phone number (in case there are questions concerning your request) and a return E-Mail address. Aircraft Information: Callsign (including ICAO designator if assigned)/type/registration number.

2. General Route Itinerary: Date range. City (ICAO Location Identifier)- City (ICAO Location Identifier)- City (ICAO Location Identifier), etc.

3. Specific route information for each leg of the flight: Callsign, departure point, date/time (UTC), route, destination, date/time (UTC).

4. Purpose: Cargo, Passenger, Diplomatic, etc. for each leg of flight.

(FAA/AJR−2 System Operations Security 6/27/2013)

CUBA

Federal Aviation Administration (FAA) Flight Routing Authorization Requirements in United States Territorial Airspace

All aircraft with Cuba registration beginning with CU; aircraft using the ICAO designator of a Cuba company; or aircraft used for Cuba diplomatic flights require FAA routing authorization for flights in United States Territorial Airspace.

Only IFR flights are eligible for FAA routing authorization. See current FAA KFDC NOTAMS for other requirements and information regarding Aircraft that Operate To or From or Within or Transit Territorial Airspace of the United States (US).

FAA routing authorization is in addition to any US State Department (DOS) diplomatic clearance or US Transportation Security Administration (TSA) waiver. To obtain FAA routing authorization, contact the FAA System Operations Support Center at 9-ATOR-HQ-RT-REQ@faa.gov or FAX 202-267-5289 (Attention FAA SOSC), or call 202-267-8115.

Provide the following information:

1. Name and address of company or individual. Include a phone number (in case there are questions concerning your request) and a return E-Mail address. Aircraft Information: Callsign (including ICAO designator if assigned)/type/registration number.

2. General Route Itinerary: Date range. City (ICAO Location Identifier)- City (ICAO Location Identifier)- City (ICAO Location Identifier), etc.

3. Specific route information for each leg of the flight: Callsign, departure point, date/time (UTC), route, destination, date/time (UTC).

4. Purpose: Cargo, Passenger, Diplomatic, etc. for each leg of flight.

(FAA/AJR−2 System Operations Security 6/27/2013)

EUROPE
EUROCONTROL Integrated Initial Flight Plan Processing System (IFPS).

All aircraft flying into, departing from, or transiting Europe within the General Air Traffic (GAT) Civil system must file an International Civil Aviation Organization (ICAO) flight plan with the Integrated Initial Flight Plan Processing System (IFPS) managed by the EUROCONTROL Central Flow Management Unit (CFMU). This system is the sole source for the distribution of the IFR/GAT portions of flight plan information to Air Traffic Control (ATC) within participating European Countries collectively known as the IFPS Zone (IFPZ). Flight plans and associated messages for all IFR flights, including the IFR portions of mixed IFR/VFR flights, entering, over flying or departing the IFPZ, shall be addressed only to the two IFPS addresses for that portion of the flight within the IFPZ. The IFPS addresses to be included in flight plans and associated messages submitted by operators that intend to fly into or through the IFPZ are as follows:

Network	**IFPS Unit Addresses**	
IFPU1		
Haren, Belgium	**AFTN**	EUCHZMFP
SITA BRUEP7X		
IFPU2		
Brétigny, France	**AFTN**	EUCBZMFP
SITA PAREP7X		

IFPS will ensure distribution of the accepted flight plan to all relevant ATS units within their area of responsibility. Flight plan message originators filing to IFPS are responsible for ensuring that the flight plan and any modifications made thereto are addressed to all the relevant ATS units outside the IFPZ. In order to ensure consistency between the flight plan data distributed within the IFPZ and that distributed outside the IFPZ, the EUROCONTROL CFMU has established a “re-addressing function”. The “re-addressing function” is intended primarily for flights originating within the IFPZ and proceeding outside the IFPZ.

Note.— Detailed procedures and information applicable to flight plan addressing and distribution are contained in the EUROCONTROL “Basic CFMU Handbook”.

Additional information may be obtained from Aeronautical Information Publications (AIP) and/or Aeronautical Information Circulars (AIC) issued by individual countries, through commercial flight planners, or by contacting EUROCONTROL, rue de la Fusee, 96, B−1130, Brussels, Belgium. Telephone: 32−2− 745−1950, FAX: 32−2− 729−9041 and on the EUROCONTROL Web site: www.eurocontrol.int.

NOTE−IFPS Zone Countries − Albania, Armenia, Austria, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Lithuania, Luxembourg, Former Yugoslav Republic of Macedonia, Malta, Monaco, Morocco, Netherlands, Norway, Poland, Portugal, Republic of Moldova, Romania, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, Ukraine, United Kingdom, Serbia and Montenegro.

(AEU-500 6/7/2010)

IRAN (ISLAMIC REPUBLIC OF)

Federal Aviation Administration (FAA) Flight Routing Authorization Requirements in United States Territorial Airspace

All aircraft with Iran registrations beginning with EP; aircraft using the ICAO designator of an Iran company; or aircraft used for Iran diplomatic flights require FAA routing authorization for flights in United States Territorial Airspace.

Only IFR flights are eligible for FAA routing authorization. See current FAA KFDC NOTAMS for other requirements and information regarding Aircraft that Operate To or From or Within or Transit Territorial Airspace of the United States (US).

FAA routing authorization is in addition to any US State Department (DOS) diplomatic clearance or US Transportation Security Administration (TSA) waiver. To obtain FAA routing authorization, contact the FAA System Operations Support Center at 9-ATOR-HQ-RT-REQ@faa.gov or FAX 202-267-5289 (Attention FAA SOSC), or call 202-267-8115.

Provide the following information:

1. Name and address of company or individual. Include a phone number (in case there are questions concerning your request) and a return E-Mail address. Aircraft Information: Callsign (including ICAO designator if assigned)/type/registration number.

2. General Route Itinerary: Date range. City (ICAO Location Identifier)- City (ICAO Location Identifier)- City (ICAO Location Identifier), etc.

3. Specific route information for each leg of the flight: Callsign, departure point, date/time (UTC), route, destination, date/time (UTC).

4. Purpose: Cargo, Passenger, Diplomatic, etc. for each leg of flight.

(FAA/AJR−2 System Operations Security 6/27/2013)

IRAQ

Special Federal Aviation Regulation No. 77 − Prohibition Against Certain Flights Within the Territory and Airspace of Iraq.

1. Applicability. This rule applies to the following persons:

(a) All U.S. air carriers or commercial operators;

(b) All persons exercising the privileges of an airman certificate issued by the FAA except such persons operating U.S.−registered aircraft for a foreign air carrier; or

(c) All operators of aircraft registered in the United States except where the operator of such aircraft is a foreign air carrier.

2. Flight prohibition. No person may conduct flight operations over or within the territory of Iraq except as provided in paragraphs 3 and 4 of this SFAR or except as follows:

(a) Overflights of Iraq may be conducted above flight level (FL) 200 subject to the approval of, and in accordance with the conditions established by, the appropriate authorities of Iraq.

(b) Flights departing from countries adjacent to Iraq whose climb performance will not permit operation above FL 200 prior to entering Iraqi airspace may operate at altitudes below FL 200 within Iraq to the extent necessary to permit a climb above FL 200, subject to the approval of, and in accordance with the conditions established by, the appropriate authorities of Iraq.

(c) [Reserved]

3. Permitted operations. This SFAR does not prohibit persons described in paragraph 1 from conducting flight operations within the territory and airspace of Iraq where such operations are authorized either by another agency of the United States Government with the approval of the FAA or by an exemption issued by the Administrator.

4. Emergency situations. In an emergency that requires immediate decision and action for the safety of the flight, the pilot in command of an aircraft may deviate from this SFAR to the extent required by that emergency. Except for U.S. air carriers or commercial operators that are subject to the requirements of 14 CFR parts 119, 121, or 135, each person who deviates from this rule shall, within ten (10) days of the deviation, excluding Saturdays, Sundays, and Federal holidays, submit to the nearest FAA Flight Standards District Office a complete report of the operations of the aircraft involved in the deviation, including a description of the deviation and the reasons therefore.

5. Expiration. This Special Federal Aviation Regulation will remain in effect until further notice.

(FAA/AIA−100 11/19/03)

KOREA (NORTH), DEMOCRATIC REPUBLIC OF

FDC 8/1167

Special Federal Aviation Regulation (SFAR) No. 79 − Prohibition Against Certain Flights Within the Flight Information Region of the Democratic People's Republic of Korea.

a. Applicability. This rule applies to the following persons:

1. All U.S. air carriers or commercial operators.

2. All persons exercising the privileges of an airman certificate issued by the FAA, except such persons operating U.S.−registered aircraft for a foreign air carrier.

3. All operators of aircraft registered in the United States except where the operator of such aircraft is a foreign air carrier.

b. Flight prohibition. Except as provided in paragraphs c and d of this SFAR, no person described in paragraph a may conduct flight through the Pyongyang FIR west of 132 degrees east longitude.

c. Permitted operations. This SFAR does not prohibit persons described in paragraph a from conducting flight operations within the Pyongyang FIR west of 132 degrees east longitude where such operations are authorized either by exemption issued by the Administrator or by another agency of the United States Government with FAA approval.

d. Emergency situations. In an emergency that requires immediate decision and action for the safety of the flight, the pilot in command of an aircraft may deviate from this SFAR to the extent required by that emergency. Except for U.S. air carriers and commercial operators that are subject to the requirements of 14 CFR parts 121, 125, or 135, each person who deviates from this rule shall, within ten (10) days of the deviation, excluding Saturdays, Sundays, and Federal holidays, submit to the nearest FAA Flight Standards District Office a complete report of the operations of the aircraft involved in the deviation, including a description of the deviation and the reasons therefore.

e. Expiration. This Special Federal Aviation Regulation No. 79 will remain in effect until further notice.

(FAA/AJR−2 System Operations Security 6/8/2010)

KOREA (NORTH), DEMOCRATIC REPUBLIC OF

FDC 9/8281

The North Korean government stated on March 5, 2009 that it cannot guarantee the security of South Korean civil aircraft operating in the territory and airspace of North Korea or in airspace above the East Sea of Korea (Sea of Japan).

The exact nature of the potential danger, the extent to which it may pose a hazard to non−South Korean civil aircraft operations, and the exact area within which a potential hazard may exist are not clear.

All operators operating in the aforementioned area are urged to exercise caution. Additionally, U.S. operators are reminded of the provisions of Special Federal Aviation Regulation 79.

(FAA/AJR−2 System Operations Security 6/8/2010)

DEMOCRATIC PEOPLE'S REPUBLIC OF NORTH KOREA (DRPK)

Federal Aviation Administration (FAA) Flight Routing Authorization Requirements in United States Territorial Airspace

All aircraft with DPRK registrations beginning with P; aircraft using the ICAO designator of a DPRK company; or aircraft used for DPRK diplomatic flights require FAA routing authorization for flights in United States Territorial Airspace.

Only IFR flights are eligible for FAA routing authorization. See current FAA KFDC NOTAMS for other requirements and information regarding Aircraft that Operate To or From or Within or Transit Territorial Airspace of the United States (US).

FAA routing authorization is in addition to any US State Department (DOS) diplomatic clearance or US Transportation Security Administration (TSA) waiver. To obtain FAA routing authorization, contact the FAA System Operations Support Center at 9-ATOR-HQ-RT-REQ@faa.gov or FAX 202-267-5289 (Attention FAA SOSC), or call 202-267-8115.

Provide the following information:

1. Name and address of company or individual. Include a phone number (in case there are questions concerning your request) and a return E-Mail address. Aircraft Information: Callsign (including ICAO designator if assigned)/type/registration number.

2. General Route Itinerary: Date range. City (ICAO Location Identifier)- City (ICAO Location Identifier)- City (ICAO Location Identifier), etc.

3. Specific route information for each leg of the flight: Callsign, departure point, date/time (UTC), route, destination, date/time (UTC).

4. Purpose: Cargo, Passenger, Diplomatic, etc. for each leg of flight.

(FAA/AJR−2 System Operations Security 6/27/2013)

RUSSIA FEDERATION

Federal Aviation Administration (FAA) Flight Routing Authorization Requirements in United States Territorial Airspace

All aircraft with Russian Federation registrations beginning with RA; aircraft using the ICAO designator of a Russian Federation company; or aircraft used for Russian Federation diplomatic flights require FAA

routing authorization for flights in United States Territorial Airspace, unless the aircraft is operated by a company with FAA Part 129 operations specifications.

Only IFR flights are eligible for FAA routing authorization. See current FAA KFDC NOTAMS for other requirements and information regarding Aircraft that Operate To or From or Within or Transit Territorial Airspace of the United States (US).

FAA routing authorization is in addition to any US State Department (DOS) diplomatic clearance or US Transportation Security Administration (TSA) waiver. To obtain FAA routing authorization, contact the FAA System Operations Support Center at 9-ATOR-HQ-RT-REQ@faa.gov or FAX 202-267-5289 (Attention FAA SOSC), or call 202-267-8115.

Provide the following information:

1. Name and address of company or individual. Include a phone number (in case there are questions concerning your request) and a return E-Mail address. Aircraft Information: Callsign (including ICAO designator if assigned)/type/registration number.

2. General Route Itinerary: Date range. City (ICAO Location Identifier)- City (ICAO Location Identifier)- City (ICAO Location Identifier), etc.

3. Specific route information for each leg of the flight: Callsign, departure point, date/time (UTC), route, destination, date/time (UTC).

4. Purpose: Cargo, Passenger, Diplomatic, etc. for each leg of flight.

(FAA/AJR−2 System Operations Security 6/27/2013)

SUDAN

Federal Aviation Administration (FAA) Flight Routing Authorization Requirements in United States Territorial Airspace

All aircraft with Sudan registrations beginning with ST; aircraft using the ICAO designator of a Sudan company; or aircraft used for Sudan diplomatic flights require FAA routing authorization for flights in United States Territorial Airspace.

Only IFR flights are eligible for FAA routing authorization. See current FAA KFDC NOTAMS for other requirements and information regarding Aircraft that Operate To or From or Within or Transit Territorial Airspace of the United States (US).

FAA routing authorization is in addition to any US State Department (DOS) diplomatic clearance or US Transportation Security Administration (TSA) waiver. To obtain FAA routing authorization, contact the FAA System Operations Support Center at 9-ATOR-HQ-RT-REQ@faa.gov or FAX 202-267-5289 (Attention FAA SOSC), or call 202-267-8115.

Provide the following information:

1. Name and address of company or individual. Include a phone number (in case there are questions concerning your request) and a return E-Mail address. Aircraft Information: Callsign (including ICAO designator if assigned)/type/registration number.

2. General Route Itinerary: Date range. City (ICAO Location Identifier)- City (ICAO Location Identifier)- City (ICAO Location Identifier), etc.

3. Specific route information for each leg of the flight: Callsign, departure point, date/time (UTC), route, destination, date/time (UTC).

4. Purpose: Cargo, Passenger, Diplomatic, etc. for each leg of flight.

(FAA/AJR−2 System Operations Security 6/27/2013)

SYRIAN ARAB REPUBLIC

Federal Aviation Administration (FAA) Flight Routing Authorization Requirements in United States Territorial Airspace

All aircraft with Syrian Arab Republic registrations beginning with YK; aircraft using the ICAO designator of a Syrian Arab Republic company; or aircraft used for Syrian Arab Republic diplomatic flights require FAA routing authorization for flights in United States Territorial Airspace.

Only IFR flights are eligible for FAA routing authorization. See current FAA KFDC NOTAMS for other requirements and information regarding Aircraft that Operate To or From or Within or Transit Territorial Airspace of the United States (US).

FAA routing authorization is in addition to any US State Department (DOS) diplomatic clearance or US Transportation Security Administration (TSA) waiver. To obtain FAA routing authorization, contact the FAA System Operations Support Center at 9-ATOR-HQ-RT-REQ@faa.gov or FAX 202-267-5289 (Attention FAA SOSC), or call 202-267-8115.

Provide the following information:

1. Name and address of company or individual. Include a phone number (in case there are questions concerning your request) and a return E-Mail address. Aircraft Information: Callsign (including ICAO designator if assigned)/type/registration number.

2. General Route Itinerary: Date range. City (ICAO Location Identifier)- City (ICAO Location Identifier)- City (ICAO Location Identifier), etc.

3. Specific route information for each leg of the flight: Callsign, departure point, date/time (UTC), route, destination, date/time (UTC).

4. Purpose: Cargo, Passenger, Diplomatic, etc. for each leg of flight.

(FAA/AJR−2 System Operations Security 6/27/2013)

SECTION 2

INTERNATIONAL OCEANIC AIRSPACE NOTICES

INTRODUCTION

The following information contains the most current notices involving airspace matters pertaining to U.S. internationally delegated airspace. The information provided is divided into two sections: General and Region Specific.

Failure to Comply with ATC Clearances in Oceanic Airspace

The FAA has identified categories of problematic events that continue to occur in oceanic operations. These events involve pilots either not complying with an ATC clearance or not adhering to Oceanic Weather Deviation Procedures published in ICAO Document 4444 (Procedures For Air Navigation Services, Air Traffic Management), and which are reprinted in the Aeronautical Information Manual (AIM), and in the United States Aeronautical Information Publication (AIP). The following are descriptions of problematic categories:

1. Failure to comply with Conditional Clearances. Pilots continue to disregard the time restriction in conditional clearances. For example, with the following clearance issued at 1200: "MAINTAIN FL 350, AT 1210 CLIMB TO AND MAINTAIN FL370, REPORT REACHING," pilots frequently climb right away instead of waiting for the time restriction (in this case, 1210).

2. Failure to Update Time Estimates. Pilots continue to provide inaccurate estimated times of arrival (ETAs). ICAO Annex 2 requires pilots to notify ATC if the originally provided estimate changes in excess of 2 minutes from that previously notified. ETAs can be affected by weather deviations, speed changes, and/or inaccurate winds or speeds in the navigation computer.

3. Failure to Coordinate Altitude Clearance. Pilots continue to climb without clearance to the altitude associated with the oceanic clearance and/or an en route filed level change (in Item 15 of the flight plan). Such vertical clearances need to be coordinated with ATC.

4. Non-adherence to Oceanic Weather Deviation Procedures. Pilots continue to deviate around weather without requesting clearances from ATC. Only if conditions preclude such coordination should pilots deviate without a clearance, and if such un−cleared deviations are necessary, pilots should adhere to the ICAO Weather Deviation Procedures referenced above.

5. Non−compliance with Revised Clearances. Pilots continue to fly the filed flight plan routing instead of the ATC cleared routing. Pilots whose oceanic clearances differ from the filed routing in many cases fail to re−program navigation computers with the revised route of flight.

Failure to comply with ATC clearances is a major cause of risk in oceanic airspace. Requirements to comply with ATC clearances are published in paragraph 3.6.2 (Adherence to flight plan) of ICAO Annex 2 (Rules of the Air) and 14 CFR (Code of Federal Regulations), Part 91, Section 91.123 (Compliance with ATC clearances and instructions).

Operators must stress in pilot training and operations manuals the necessity to:

1. Comply fully with an ATC clearance.

2. Obtain a revised clearance prior to deviating from cleared track or flight level or, if unable to obtain a clearance prior to deviating, follow the appropriate deviation procedure for oceanic airspace (weather deviation or in-flight contingency).

3.Adhere to the provisions of published Oceanic Weather Deviation Procedures.

Questions on this Notice may be directed to one of the following:

Madison Walton (FAA Flight Standards Performance Based Flight Systems Branch), Phone (1) 202-267–8850; E–mail: Madison.Walton@faa.gov

Kevin Kelley (FAA Flight Standards Performance Based Flight Systems Branch). Phone (1) 202-863-8854; E–mail: Kevin.C.Kelley@faa.gov

(Performance Based Flight Systems Branch, AFS-470, 7/10/2017)

GENERAL

Re–designation of North Atlantic Minimum Navigation Performance Specification Airspace as NAT High Level Airspace

1. Purpose. This notice serves to inform the U.S. aviation community that the ICAO North Atlantic Systems Planning Group re–designated the long–standing North Atlantic (NAT) Minimum Navigation Performance Specifications (MNPS) airspace as NAT High Level Airspace (HLA) on February 4, 2016. This change supports the MNPS to performance based navigation (PBN) transition plan. This action is taken in accordance with ICAO NAT Implementation Management Group Decision 45/2 which was announced in a January 5, 2015 letter to States and industry organizations from the ICAO European and North Atlantic office.

2. Boundaries of NAT HLA. The NAT HLA includes the following airspace, between flight levels 285 and 420: the oceanic control areas of Bodo Oceanic, Gander Oceanic, New York Oceanic East, Reykjavik, Santa Maria, and Shanwick, excluding the Shannon and Brest Ocean Transition Areas.

3. Letter X for Air Traffic Control Flight Plan. Item 10A of the flight plan filed with ATC should continue to be annotated with the letter "X" to indicate that the aircraft and operator meet the requirements for NAT HLA operations.

4. Effect on FAA Operations Specification (OpSpec), Management Specification (MSpec) and Letter of Authorization (LOA) B039. A new OpSpec/MSpec/LOA B039 was effective in June, 2016 under the title "Operations in North Atlantic High Level Airspace (NAT HLA)." Previous issuances of B039 (i.e. reflecting authorization for operations in MNPS airspace) may remain valid until January 2020 and permit operations in NAT HLA until then. All new issuances, and re–issuances, of B039 now require the operator to be capable of and authorized for a minimum of RNP 10.

5. FAA NAT Resource Guide for U.S. Operators. The NAT Resource Guide has been updated to reflect the ongoing transition from NAT MNPS to NAT HLA. The guide can be found at:

http://www.faa.gov/about/office_org/headquarters_offices/avs/offices/afs/afs400/afs470/media/NAT.pdf

6. Questions. If you have questions, please contact one of the following:

- Kevin Kelley, FAA Performance Based Flight Systems Branch (AFS–470), 202–267–8854, Kevin.C.Kelley@faa.gov
- Mark Wisniewski, SAIC, AFS–470 program support, 202–267–8843, Mark.CTR.Wisniewski@faa.gov
- Roy Grimes, CSSI, Inc. AFS–470 program support, 202–863–3692, RGrimes@cssiinc.com
- Madison Walton, AFS–470, 202–267–8850, Madison.Walton@faa.gov

(Performance Based Flight Systems Branch, AFS-470, revised 9/15/16)

SPECIAL NOTICE –– LOST COMMUNICATIONS

If the pilot of an aircraft operating in international airspace under U.S. jurisdiction and equipped with a coded radar beacon transponder experiences a loss of two–way radio capability, the pilot should:

a. Adjust the transponder to reply on Mode 3/A, Code 7700 for a period of 1 (one) minute.

b. Then change to code 7600 and remain on 7600 for a period of 15 minutes or the remainder of the flight, whichever occurs first.

c. Repeat steps a and b as practicable.

The pilot should understand that s/he may not be in an area of radar coverage. Many radar facilities are also not presently equipped to automatically display code 7600 and will interrogate 7600 only when the aircraft is under direct radar control at the time of radio failure. However, replying on 7700 first increases the probability of early detection of a radio failure condition. **(FAA)**

SPECIAL NOTICE ––INSPECTION OF MEANS OF CONVEYANCE FOR AIRCRAFT DEPARTING CONTINENTAL UNITED STATES

Inspection of aircraft prior to departure. No person shall move any aircraft from Hawaii to the continental United States, Puerto Rico, or the Virgin Islands of the United States, unless the person moving the aircraft has contacted an inspector and offered the inspector the opportunity to inspect the aircraft prior to departure and the inspector has informed the person proposing to move the aircraft that the aircraft may depart.

Inspection of aircraft moving to Guam. Any person who has moved an aircraft from Hawaii to Guam shall contact an inspector and offer the inspector the opportunity to inspect the aircraft upon the aircraft's arrival in Guam, unless the aircraft has been inspected and cleared in Hawaii prior to departure in accordance with arrangements made between the operator of the aircraft, the Animal and Plant Inspection Service, and the government of Guam. **(USDA Regulation 318.13–9)**

REGION SPECIFIC

GUIDANCE FOR U.S. OPERATORS: SPECIAL EMPHASIS ITEMS FOR OPERATION IN NORTH ATLANTIC REDUCED LATERAL SEPARATION MINIMUM (RLATSM) TRIALS – 2 FEBRUARY 2017 UPDATE –

1. Purpose of Notice. The purpose of this notice is to provide guidance to U.S. North Atlantic (NAT) operators on material to be included in pilot and dispatcher training programs and operations manuals to prepare them for NAT RLatSM operations. **Paragraph 2 provides information on the delay of RlatSM Phase 2. Paragraph 5h and Attachment A, paragraph 9 provide updated guidance for pilot contingency procedures.**

a. The **"FAA NAT Resource Guide for U.S. Operators"** provides information on NAT initiatives and programs, including this notice. It can be accessed at:

http://www.faa.gov/about/office_org/headquarters_offices/avs/offices/afs/afs400/afs470/media/NAT.pdf

It is recommended that "Google Chrome" be used to access this site.

b. **Operator attention is directed to Attachment A.** It provides a "quick reference" for the RLatSM Special Emphasis Items contained in this bulletin. It is intended to be used as a job aid for operators developing pilot and dispatcher training material.

c. The following is an explanation of the terms “should”, “must” and “shall” as used in this bulletin.

(1) “Should” is used to indicate a recommended practice or policy that is considered as desirable for the safety of operations.

(2) “Shall” and “must” are used to indicate a practice or policy that is considered as necessary for the safety of operations.

2. RLatSM Project Plan Overview. **Phase 1** of the NAT RLatSM trial commenced in portions of the Gander and Shanwick oceanic control areas (OCA) in December 2015. **Phase 1 is continuing.** **However, the RLatSM Phase 2 start date has been delayed.** It will not start on 10 November 2016 as previously planned. At least two months’ notice will be given in advance of the new start date. RLatSM Phase 2 is still planned to be implemented in portions of the Gander, Shanwick and Reykjavik Oceanic Control Areas (OCA).

a. **During Phase 1 of the RLatSM trial,** 25 NM lateral separation minimum is applied by establishing ½ degree track spacing between **three core** NAT Organized Track System (OTS) tracks. 25 NM lateral separation is applied between flight level (FL) 350−390 (inclusive).

b. **During Phase 2 of the RLatSM trial,** the 25 NM lateral separation minimum will be implemented by applying ½ degree track spacing between **all NAT Organized Track System (OTS) tracks.** 25 NM lateral separation will continue to be be applied between flight level (FL) 350−390 (inclusive).

c. OTS tracks separated using the reduced lateral separation minimum are established by publishing OTS tracks defined by ½ degree waypoints (e.g., 54 degrees−30 minutes NORTH latitude/50 degrees WEST longitude) between adjacent tracks defined by whole degree waypoints (e.g. 54 degrees NORTH latitude/50 degrees WEST longitude, respectively).

Note: operators are advised that due to pre−tactical considerations, standard laterally separated tracks (60nm) may be contained within the NAT OTS structure. RLatSM tracks will be designated tracks identified in “Remark 3” of the NAT Track Message.

d. Only those operators/aircraft eligible for RLatSM operations will be allowed to operate on designated RLatSM tracks between FL 350−390 (inclusive). See paragraph 3 (Operator/Aircraft Eligibility).

e. Strategic Lateral Offset Procedures (SLOP) will continue to be used in accordance with NAT Doc 007 (NAT Operations and Airspace Manual), paragraph 8.5.

f. Enhanced ATC surveillance and communication will be provided via FANS 1/A (or equivalent) data link systems. Automatic Dependent Surveillance (ADS−C) will provide route conformance monitoring, periodic aircraft reporting and controller alerts for Lateral Deviation Events (LDE) and vertical deviation events (Level Range Deviation Events (LRDE). Controller−Pilot Data Link Communications (CPDLC) will enhance ATC intervention and communication capabilities.

3. Operator/Aircraft Eligibility. U.S. operators do not need to apply to participate in the trial. Operators will be eligible to flight plan and fly RLatSM tracks provided the flights are:

- Authorized Required Navigation Performance 4 (RNP 4)
- ADS-C and CPDLC equipped and authorized; and,
- Operating required Communications, Navigation and Surveillance (CNS) systems

Note: Job Aids for RNP 4 and Data Link operations authorization are available. See paragraph 6.

4. Flight Planning Provisions

a. Only those operators/aircraft eligible for RLatSM operations are allowed to operate on designated RLatSM tracks between FL 350−390 (inclusive). All RLatSM tracks and FLs are uniquely identified in Remark 3 of the OTS Track Message as shown below:

Westbound NAT Track Message Example: Phase 2 RLatSM Tracks

Note: See "Remark 3". Tracks A, B, C, D and E are designated as RLatSM tracks between FL 350−390.

b. Operators must file the correct ICAO Flight Plan annotations in Items 10 and 18 to indicate that RLatSM required CNS systems are operational for the flight.

(1) Item 10a (Radio communication, navigation and approach aid equipment and capabilities).

- Insert "X" to indicate that the aircraft meets requirements for NAT HLA operations. (See FAA Notice "Re−designation of NAT MNPS Airspace As High Level Airspace (HLA);

- Insert “J5” to indicate FANS 1/A (or equivalent) Inmarsat CPDLC SATCOM and/or “J7” to indicate FANS 1/A (or equivalent CPDLC Iridium SATCOM data link equipage and operation;

- Insert “R” to indicate that aircraft navigation system equipage and operation are Performance Based Navigation (PBN) approved. See below for the related Item 18 entry for RNP 4.

(2) Item 10b (Surveillance equipment and capabilities)

- Insert “D1” to indicate FANS 1/A (or equivalent) ADS-C equipage and operation

(3) Item 18 (Other information)

- Insert the characters “PBN/” followed by “L1” to indicate RNP 4 authorization.

5. Special Emphasis Items for RLatSM Operators. The Special Emphasis Items (SEI) listed below should be incorporated into operator training programs and operations manuals with the intent of raising pilot and dispatcher awareness of the importance of following procedures in an environment where ½ degree waypoints and a lateral separation minimum of 25 NM are applied. Each SEI is followed by an explanation of the factors leading it to be identified as an RLatSM SEI.

a. Requirement to use the CNS equipment that is indicated in the ICAO flight plan:

ATC uses the Flight Plan annotations in Items 10 and 18 to apply the reduced separation between aircraft. Therefore, before entering the NAT, the pilot must ensure that:

- the aircraft is logged on when data link capability (J5, J7, D1) has been filed in the FPL; and

- RNP 4 is inserted into the FMC, when RNP 4 capability (L1) has been filed in the FPL. This is to enable aircraft navigation system monitoring and alerting against the required RNP 4 Navigation Specification.

b. Pilot Training on Map and FMC Displays of ½ Degree and Whole Degree Waypoints:

To mitigate misinterpretation of waypoint coordinates, operator initial and re-current training programs and operations manuals must incorporate training and guidance to enable pilots to understand map and FMC displays of ½ degree and whole degree waypoints.

Explanation

Map displays and certain FMC pages generally do not display full waypoint degrees **and** minutes, e.g. when the full 13 latitude/longitude characters are used to insert ½ degree waypoints. See Figure 1 and 2 in Attachment B.

c. Aircraft Navigation Database (NDB) Waypoint Identifiers

In 2015, Canada, the United Kingdom and Iceland published Aeronautical Information Circulars (AIC) strongly advocating that aircraft NDB vendors and flight planning services **not** provide operators with half–degree waypoint identifiers in the ARINC 424, paragraph 7.2.5 “N–prefix” format (*e.g., N5250 = 52º30’ NORTH 050º00’WEST).* See Canada AIC 23/15 (23 July 2015), UK AIC 059/2015 (9 July 2015), and Iceland AIC A009/2015 (18 September 2015). The guidance in these circulars will be incorporated into the Aeronautical Information Publications (AIP) of the respective organizations in the future.

NAT operators should use a full latitude/longitude (e.g., 13-character) input for waypoints containing both half-degree and whole degrees of latitude and whole degrees of longitude, when they are required to make a manual input of waypoints, unless they have the operational need discussed below.

NAT operators **with an operational need to populate the aircraft NDB** with a 5-character waypoint identifier should ensure that the aircraft NDB vendors and flight planning services use an alternate half-degree of latitude 5-character format such as Hxxyy, where xx = degrees and 30 minutes of NORTH latitude and yy = degrees of WEST longitude *(e.g., H5250 = 52 °30' NORTH 050 °00' WEST).* (It is recognized that, for whole degree waypoint inputs, such operators will likely continue using the ARINC 424, 7.2.5 "N-suffix" format *(e.g., 5250N = 52 °00' NORTH 050 °00' WEST)).*

Rerouting of flights onto RLatSM identified tracks containing ½ degree coordinates will only be permitted using a CPDLC route clearance uplink. Aircraft will therefore not be re−routed onto ½ degree OTS tracks if ARINC 623 data link or voice is used for the issuance of the oceanic clearance.

The CPDLC route clearance will be uplinked in a full Lat/Long format that will be unfamiliar to the flight crews using an ARINC 424, 7.2.5 format. Operators **with an operational need to populate the aircraft NDB** with a 5−character waypoint identifier format need to ensure flight crews are properly trained on the use of the full Lat/Long waypoint format in uplink messages. They must also emphasize the necessity for proper waypoint verification procedures.

Explanation

Half-degree waypoint identifiers in the ARINC 424, paragraph 7.2.5 "N-prefix" format have led to a number of Gross Navigation Errors (GNEs) and Lateral Deviations. The guidance for waypoint insertion in paragraph 5c is intended to remove the potential for such errors. They occur when a pilot intending to input a waypoint defined by a half-degree of latitude inadvertently loads a waypoint containing a whole-degree of latitude, or vice versa, because the "N" is not loaded in the correct pre-fix or suffix position.

d. Pilot Procedures for Verifying Waypoint Degrees and Minutes Inserted into Aircraft Navigation Systems:

Procedures must be used to display and verify the DEGREES and MINUTES loaded into the Flight Management Computer (FMC) for the "un-named" (Lat/Long) waypoints defining the route contained in the oceanic clearance.

Regardless of FMC waypoint format and entry method, crew procedures should be designed to promote strong crew resource management techniques to prevent opportunities for error occurring as a result of confirmation bias and to generally maintain an attitude of healthy suspicion. Accordingly, the waypoint verification procedures should be conducted as detailed below.

- During pre-flight LRNS programming, both pilots independently verify the full latitude and longitude coordinates of "un-named" (Lat/Long) waypoints defining the expected route of flight within oceanic airspace as entered in the FMC.
- Upon receipt of a revised oceanic clearance (i.e., one not conforming to the flight planned route), both pilots independently verify the full latitude and longitude coordinates of "un-named" (Lat/Long) waypoints defining the route contained in the revised oceanic clearance.
- Approaching an oceanic waypoint, one pilot should verify the full latitude and longitude coordinates of that waypoint in the FMC, the NEXT and NEXT +1 waypoints, while the other

pilot crosschecks the latitude and longitude coordinates against the master flight plan/oceanic clearance.

Explanation

Due to the factors in the map and FMC display of ½ degree and whole degree waypoints, it is imperative that pilots follow the procedure in paragraph 5d above to avoid lateral errors caused by incorrect insertion of waypoints. Verification of the full DEGREES and MINUTES of oceanic waypoints loaded into the FMC is a critical step in ensuring a proper navigational load.

e. Pilot Track and Distance Check:

It is strongly recommended that pilot pre-flight and in-flight procedures call for the pilot to compare the track and distance between waypoints shown on the Computer Flight Plan (CFP) to those displayed by the FMC.

Pilots should be aware that waypoint insertion errors of ½ degree of latitude may in some cases result in only small differences in track and distance, however, the track and distance check can help prevent waypoint insertion errors of one degree or more that have been observed in oceanic operations.

Note: the currency of magnetic variation tables loaded into aircraft navigation databases and the point at which the track is measured affect the track displayed on the FMC by as much as ±3 degrees.

Explanation

This check remains valuable for RLatSM operations because waypoint insertion errors are **not** limited to ½ degree errors and waypoint insertion errors of one degree or more have been observed in oceanic operations. Waypoint insertion errors of ½ degree produce a small difference in leg segment track and distance, however, as noted above, waypoint insertion errors are not limited to ½ degree.

f. Pilot Action When Notified By ATC of Possible Deviation from Cleared Track:

Flight crews are advised that, should they be notified that ATC systems indicate the aircraft is not flying the cleared route, they should immediately display the full degrees and minutes loaded into the FMC for the NEXT and NEXT + 1 waypoints, and verify them against the cleared route before responding.

Voice message example: “SHANWICK CONFIRMS YOUR POSITION REPORT INDICATES INCORRECT ROUTING. CHECK FULL DEGREES AND MINUTES LOADED INTO FMC. YOUR CLEARED ROUTE IS [route]”

CPDLC message example:

YOUR POSITION REPORT INDICATES INCORRECT ROUTING. CHECK FULL DEGREES AND MINUTES LOADED INTO FMC. YOUR CLEARED ROUTE IS [route]

When ATC notifies the pilot that the aircraft has indicated it has already deviated from the cleared track (UM169f: *ADS-C INDICATES OFF ROUTE. ADVISE INTENTIONS*), the pilot shall immediately display the full DEGREES and MINUTES loaded into the FMC for the NEXT waypoint, and verify against the cleared route.

g. Policy for Operational Airborne Collision Avoidance System II (ACAS II):

Prior to departure for flight on an NAT OTS track at a flight level where RLatSM is applied, the ACAS II system shall be fully operational for the pilot flying (i.e., the TA and RA visual display and audio function will be operative for the pilot flying). If the ACAS II system is not fully operational for the pilot flying, the operator has the option of requesting clearance to operate on a track and/or at a FL where RLatSM is not applied. If the ACAS II system fails after departure, the aircraft may continue on the cleared route.

Note: The ACAS II (TCAS II) system must be a Version 7.0 or more recent version).

Explanation

ACAS II provides a valuable situational awareness tool and safety net for pilots operating in NAT airspace including those where aircraft separation standards have already been reduced in the vertical and longitudinal dimensions. The carriage and operation of ACAS II is emphasized here in the context of RLatSM trials for the following reasons:

- The introduction of ½ degree OTS waypoints is an operational change that introduces the use of ½ degree waypoints into NAT OTS operations. Although both pilot procedures and ADS–C conformance monitoring capabilities should mitigate the occurrence of lateral deviations related to ½ degree waypoints, ACAS II provides an independent margin of safety should lateral deviations occur during the RLatSM trial period.

- ACAS II will provide a **situational awareness tool** that will enable pilots to be better prepared to safely execute weather deviation and contingency procedures necessitating lateral deviations (e.g., diversions and turn-backs). In the RLatSM operational environment, such deviations will occur in airspace where the minimum lateral separation is to be 25 NM.

h. Pilot In-flight Contingency Procedures and Weather Deviation Procedures (Diversions, Turn-backs, *etc.):*

In training and checking programs, operators shall place special emphasis on pilot knowledge of and preparation to execute the *Special Procedures for Inflight Contingencies in Oceanic Airspace* published in ICAO Doc 4444, paragraph 15.2 and *Weather deviation procedures* (paragraph 15.2.3).

Pilots must be aware that when crossing adjacent tracks without an ATC clearance, the potential vertical separation provided by the In-flight Contingency Procedure is 500 ft. which may not adequately account for RVSM Altimetry System Error. Pilots must use all the steps called for in the Contingency Procedures to avoid conflict with other aircraft. Consideration should be given to intercepting the 15 NM offset in the same direction of flight and then descending below FL 280 or climbing above FL 410 prior to crossing adjacent tracks or making a 180° turn back.

Pilots must also be aware that when unable to obtain an ATC clearance, Weather Deviation Procedures call for a climb or descent of 300 ft. based on direction of flight and direction of deviation, and, in addition, guidance to the pilot is to adjust the path of the aircraft, if necessary, to avoid aircraft at or near the same flight level.

Pilots must stringently follow all measures for avoiding conflict with other aircraft provided for in the Doc 4444 Contingency and Weather Deviation Procedures.

Explanation

The implementation of RLatSM (25 NM) separation and ½ degree track spacing significantly reduces the distance and time a diverting aircraft has to maneuver when executing a diversion, turn–back or weather

deviation without an ATC clearance before approaching adjacent tracks. It also reduces the time that a pilot has to obtain an ATC clearance. (An aircraft deviating from track can be in the proximity of aircraft on an adjacent track within approximately 4 minutes, depending on the angle of deviation from cleared track). In addition, as discussed above, the margin for safety for aircraft crossing adjacent tracks is 500 ft. of vertical separation when executing In−flight Contingency Procedures.

i. RLatSM Operational policies (aircraft CNS system failure, data link system failure, etc.):

(1) **Objective.** The guidance provided in the paragraphs below applies during the RLatSM trials. It is intended to supplement the Global Operational Data Link Document (GOLD) guidance to controllers and flight crew on data link service failures and aircraft data link system failures (GOLD paragraphs 4.9.4 and 5.9.4 respectively).

(2) **RLatSM Required CNS System Failure Prior to Departure.** If a flight experiences a failure of an RLatSM required CNS system PRIOR TO DEPARTURE, the flight should flight plan so as to remain clear of NAT RLatSM tracks between FL 350−390 (inclusive).

(3) **RLatSM Required CNS System Failure After Departure But Prior to Entering On To RLatSM Tracks Between FL 350−390 (Inclusive).** If a flight experiences a failure of an RLatSM required CNS system AFTER DEPARTURE BUT PRIOR TO ENTERING RLATSM AIRSPACE, the flight should contact ATC and request a revised clearance that will keep it clear of NAT RLatSM tracks between FL 350− 390 (inclusive).

(4) **RLatSM Required CNS System Failure After Entering On To RLatSM Tracks Between FL 350−390 (Inclusive).** If a flight experiences a failure of an RLatSM required CNS system WHILE OPERATING IN RLATSM AIRSPACE, ATC must be immediately advised. Such flights may be re−cleared to exit RLatSM airspace, but consideration will be given to allowing the flight to remain in the airspace, based on tactical considerations. (GOLD paragraph 4.9.4.8 refers).

Note: aircraft may be cleared to climb above FL 390 or descend below FL 350 and remain on half−degree tracks. However, 60 NM lateral separation will then be applied.

(5) **Continuous Climb or Descent of Aircraft Not RLatSM Eligible.** Any aircraft that is not RLatSM eligible may request continuous climb or descent without intermediate level off through the vertical extent of the NAT RLatSM airspace. Such requests will be considered on a tactical basis.

(6) **Altitude Reservation (ALTRV) Requests.** ALTRV requests will be considered on a case by case basis (as is done today regarding NAT MNPS airspace), irrespective of the RLatSM eligibility status of the participating aircraft.

(7) **Contingency Situations.** NAT RLatSM airspace restrictions are not applicable to aircraft experiencing a contingency situation.

j. Domestic ATC Agency Contact

Pilots are reminded to ensure that they contact the appropriate **domestic** ATC agency BEFORE exiting oceanic airspace.

6. Websites

a. The **"FAA NAT Resource Guide for U.S. Operators"** provides information on NAT initiatives and programs, including this notice. See paragraph 1a for access information.

b. Job Aid Templates.

(1) **RNP 4 Job Aid Template** (Application to conduct RNP 4 operations) – can be found on the FAA Oceanic webpage at: https://www.faa.gov/pilots/intl/oceanic_ops/

(2) **Data Link Job Aid Template** (Operator Application to Conduct Data Link Operations) –found on the Data Link Authorization Page of the NAT Resource Guide.

7. Contacts

The following individuals may be contacted for information or to provide feedback on RLatSM operations:

Name	Title	Phone	E-mail
Roy Grimes	FAA Separation Standards Program Support, CSSI, Inc.	+1 202-863-3692	**rgrimes@cssiinc.com**
Kevin Kelley	FAA Performance Based Flight Systems Branch, AFS-470	+1 202-267-8854	**Kevin.c.kelley@faa.gov**
Mark Wisniewski	SAIC, AFS-470 program support	+1 202-267-8843	Mark.CTR.Wisniewski@faa.gov
Madison Walton	FAA Performance Based Flight Systems Branch, AFS-470	+1 202-267-8850	**Madison.walton@faa.gov**

ATTACHMENT A – SUMMARY OF RLATSM SPECIAL EMPHASIS ITEMS CONTAINED IN THIS NOTICE

1. Operator/Aircraft Eligibility and Flight Planning Provisions:

Only operators that are authorized RNP 4 and equipped with and operating CPDLC and ADS−C will be eligible for RLatSM operations. In addition, the ICAO Flight Plan must be correctly annotated to indicate that RLatSM required CNS systems are operational for the flight. (Paragraph 4b refers).

2. Requirement to use the CNS equipment that is indicated in the flight plan:

The pilot must use that CNS systems indicated on the ICAO Flight Plan because ATC uses the Flight Plan annotations in Items 10 and 18 to apply the reduced separation between aircraft (Paragraph 5a refers).

The pilot must also confirm that RNP 4 is inserted into the FMC to enable aircraft navigation system monitoring and alerting against the required RNP4 Navigation Specification (Paragraph 5a refers).

3. Aircraft Navigation Database (NDB) Waypoint Identifiers:

Canadian AIC 23/15, UK AIC 059/15 and Iceland AIC A009/2015 strongly advocate that aircraft NDB vendors and flight planning services should **not** provide operators with **half−degree** waypoint identifiers in the ARINC 424, paragraph 7.2.5 "N−prefix" format (e.g., *N5250 = 52º30' NORTH 050º00'WEST)*. (These AICs will be incorporated into State AIPs in the future).

NAT operators should use a full latitude/longitude (e.g., 13−character) input for waypoint coordinates. NAT operators **with an operational need to populate the aircraft NDB** with a 5−character waypoint identifier should ensure that the aircraft NDB vendors and flight planning services use an alternate half−degree of latitude 5−character format e.g., H5250 = *52º30' NORTH 050º00' WEST.* (Paragraph 5c refers)

4. Pilot Training on Map and FMC Displays of ½ Degree and Whole Degree Waypoints:

Operator initial and re−current training programs and operations manuals must have incorporated training and guidance to enable pilots to understand map and FMC displays of ½ degree and whole degree waypoints. (Paragraph 5b and Attachment B Figure 1 and 2 refer).

5. Pilot Procedures for Verifying Waypoint Degrees and Minutes Inserted into Aircraft Navigation Systems:

Pilot Pre−flight and In−flight procedures must call for each pilot to independently display and verify the DEGREES **and** MINUTES loaded into the Flight Management Computer (FMC) for each waypoint defining the cleared route of flight. This procedure is necessary regardless of the FMC waypoint input format being used. Procedures must call for both pilots to independently verify the waypoint coordinates inserted and concur on their accuracy prior to route activation. (Paragraph 5d refers).

6. Pilot Track and Distance Check:

It is strongly recommended that pilot pre−flight and in−flight procedures call for the pilot to compare the track and distance between waypoints shown on the Computer Flight Plan (CFP) to those displayed by the FMC.

Pilots should be aware that waypoint insertion errors of ½ degree of latitude may in some cases result in only small differences in track and distance, however, the track and distance check can help prevent waypoint insertion errors of one degree or more that have been observed in oceanic operations.

Note: the currency of magnetic variation tables loaded into aircraft navigation databases and the point at which the track is measured affect the track displayed on the FMC by as much as +/− 3 degrees. (Paragraph 5e refers)

7. Pilot Action When Notified By ATC of Possible Deviation From Cleared Track:

When ATC notifies the pilot that ATC systems indicate that the aircraft is not flying the cleared track, the pilot shall immediately display the full DEGREES and MINUTES loaded into the FMC for the NEXT waypoint, and verify against the cleared route. (Paragraph 5f refers)

8. Policy for Operational Airborne Collision Avoidance System II (ACAS II):

Prior to departure for flight on in airspace where RLatSM is applied, the ACAS II system shall be fully operational for the pilot flying (i.e., the TA and RA visual display and audio function will be operative for the pilot flying). If the ACAS II system is not fully operational for the pilot flying, the operator has the option of requesting clearance to operate on a track and/or at a FL where RLatSM is not applied. If the ACAS II system fails after departure, the aircraft may continue on the cleared route.

Note: The ACAS II (TCAS II) system must be a Version 7.0 or more recent version). (Paragraph 5g refers)

9. Pilot In-flight Contingency Procedures and Weather Deviation Procedures (Diversions, Turn-backs, etc.):

In training and checking programs, operators shall place special emphasis on pilot knowledge of and preparation to execute the *Special Procedures for Inflight Contingencies in Oceanic Airspace* published in ICAO Doc 4444, paragraph 15.2 and *Weather deviation procedures* (paragraph 15.2.3).

Pilots must be aware that when crossing adjacent tracks without an ATC clearance, the potential vertical separation provided by the In−flight Contingency Procedure is 500 ft. which may not adequately account for RVSM Altimetry System Error. Pilots must use all the steps called for in the Contingency Procedure to avoid conflict with other aircraft. Consideration should be given to intercepting the 15NM offset in the same direction of flight and then descending below FL 280 or climbing above FL 410 prior to crossing adjacent tracks or making a 180° turn back.

Pilots must also be aware that when unable to obtain an ATC clearance, Weather Deviation Procedures call for a climb or descent of 300 ft. based on direction of flight and direction of deviation, and, in addition, guidance to the pilot is to adjust the path of the aircraft, if necessary, to avoid aircraft at or near the same flight level.

Pilots must stringently follow all measures for avoiding conflict with other aircraft provided for in the Doc 4444 contingency procedures. (Paragraph 5h refers).

10. RLatSM Operational policies (aircraft CNS system failure, data link system failure, etc.):

Operators must be aware of the RLatSM operational policies posted in paragraph 5i. In particular, operators must be aware that all RLatSM required aircraft CNS systems must be operational PRIOR TO DEPARTURE and PRIOR TO ENTRY on to RLatSM tracks between FL 350−390 (inclusive). In addition, if RLatSM required aircraft systems fail WHILE OPERATING IN RLATSM AIRSPACE, ATC must be advised immediately so that an appropriate course of action can be determined.

11. **Domestic ATC Agency Contact:**

Pilots are reminded to ensure that they contact the appropriate **domestic** ATC agency BEFORE exiting oceanic airspace. (Paragraph 5j refers)

ATTACHMENT B – EXAMPLE FMC AND MAP DISPLAYS

Note: Figure 1 and 2 are intended to support paragraph 5b (Pilot Training on Map and FMC Displays of ½ Degree and Whole Degree Waypoints). **The figures emphasize that for a large number of aircraft, the input of waypoints containing whole degrees of latitude and waypoints containing half−degrees of latitude will result in identical 7−character FMC and waypoint map displays.**

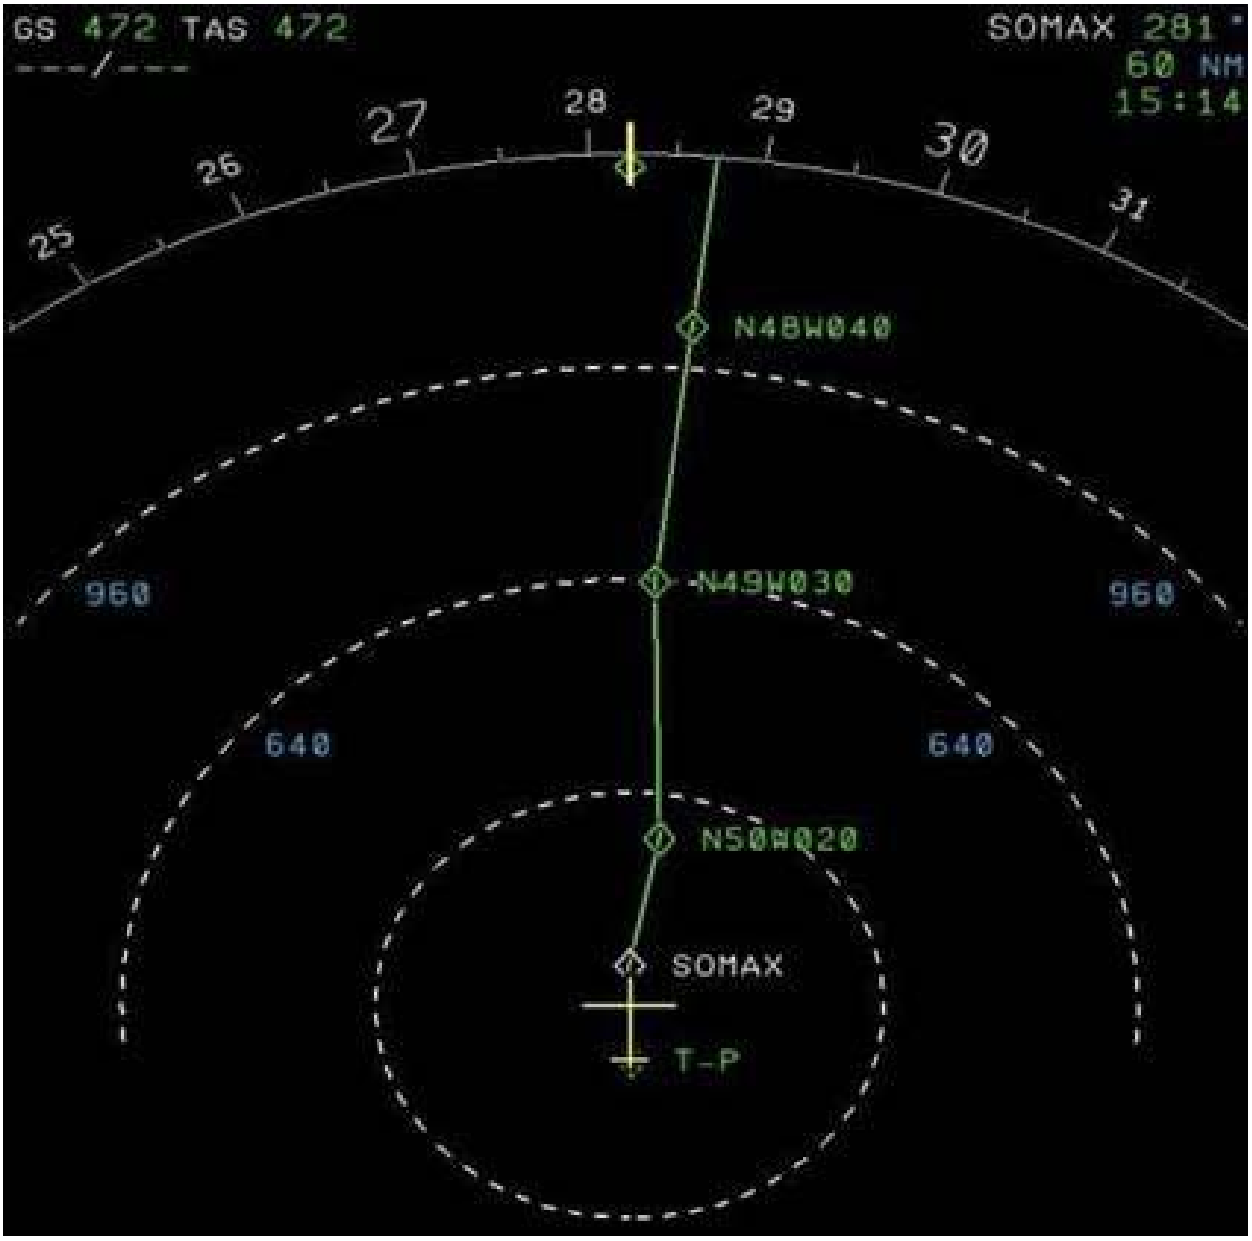

Figure 1. Example FMC Display: Full Waypoint Latitude and Longitude (13-characters) inserted into FMC

1. 52 degrees–30 minutes North latitude, 20 degrees West longitude inserted into the FMC using full latitude and longitude degrees, minutes and seconds (i.e., 13 characters)

2. The waypoint IDENT is truncated to 7 characters with **no display of minutes of latitude.**

Figure 2. Example Map Display: Full Waypoint Latitude and Longitude (13-characters) Inserted into FMC

1. 50 degrees−30 minutes North, 20 degrees West displayed is displayed in 7 characters. (N50W020)

2. Minutes of latitude are not displayed.

3. The Map display would be the same for 50 degrees North, 20 degrees West.

(Performance Based Flight Systems Branch, AFS−470, 10/7/16)

JANUARY 2017 UPDATE – NAT ATS SURVEILLANCE AIRSPACE PHASE 2 OF THE NORTH ATLANTIC REGIONAL DATA LINK MANDATE

1. Introduction

a. **Purpose of This Notice.** This Notice provides notice to U.S. operators of the plan for Phase 2 of the North Atlantic Data Link Mandate (NAT DLM). The plan was adopted at the Forty−ninth meeting of the North Atlantic Systems Planning Group (NAT SPG/49). As detailed below, Phase 2 is planned to be implemented in three phases (2A, 2B and 2C). Phase 2A was implemented on 5 February 2015. Phase 2B is planned for 7 December 2017 and Phase 2C is planned for 30 January 2020. The Notice provides information on: the expanded vertical and horizontal boundaries of NAT DLM airspace and policies for planning operations into NAT DLM airspace.

b. **January 2017 Update.** This Notice provides an update to the "ATS Surveillance Airspace Graphic". (See paragraph 10). It also provides guidance for operation of aircraft that are not data link equipped on "Tango" routes, when DLM Phase 2B is implemented on 7 December 2017. (See paragraph 4).

2. Background

a. **NAT DLM Phase 2A.** DLM Phase 2A commenced on 5 February 2015. As of that date, all aircraft operating between FL 350 to FL 390 (inclusive) on or at any point along in the NAT organized track system (OTS) during the OTS validity period are required to be fitted with and using FANS 1/A (or equivalent) CPDLC and ADS−C equipment. (This phase applies to all aircraft operating on or at any point along the tracks).

Note: the **"FAA NAT Resource Guide for U.S. Operators"** provides information on NAT initiatives and programs, including this Notice. It can be accessed at:

http://www.faa.gov/about/office_org/headquarters_offices/avs/offices/afs/afs400/afs470/media/NAT.pdf

It is recommended that "Google Chrome" be used to access the site.

b. **NAT DLM Phase 2B (7 December 2017).** DLM Phase 2B will commence on 7 December 2017. On that date the NAT DLM will apply between FL 350−FL 390 (inclusive) throughout the ICAO NAT Region.

c. **NAT DLM Objectives.** The objectives of the NAT DLM are to enhance communication, surveillance and ATC intervention capabilities in the NAT Region in order to reduce collision risk and enable the NAT Target Level of Safety to be met, particularly in the vertical plane. ADS−C provides capabilities for conformance monitoring of aircraft adherence to cleared route and FL, thereby, significantly enhancing safety in the NAT Region. ADS−C also facilitates search and rescue operations and the capability to locate the site of an accident in oceanic airspace. CPDLC significantly enhances air/ground communication capability and, therefore, controller intervention capability.

d. **NAT DLM Equipage Goals.** The NAT SPG goals for the expansion of the NAT DLM are in concert with the ICAO Global Air Navigation Plan (GANP) (Doc 9750), Aviation System Block Upgrade (ASBU) Block 0, Module B0−40 (2013−2018). This module calls for safety and efficiency improvements for enroute operations supported by data link. The NAT SPG goals are that: by 2018, 90% of aircraft operating in the NAT Region airspace at FL290 and above will be equipped with FANS 1/A (or equivalent) ADS−C and CPDLC systems, and, that by 2020, 95% of aircraft operating in that airspace will be so equipped.

3. Planned Vertical and Horizontal Boundaries For NAT Region DLM Airspace

- **Phase 2A commenced 5 February 2015:** FL350 to FL390 (inclusive) all tracks within the NAT Organized Track System (OTS). (This phase applies to all aircraft operating on or at any point along the tracks;

- **Phase 2B commencing 7 December 2017:** FL350-FL390 (inclusive) throughout the ICAO NAT Region;

- **Phase 2C commencing 30 January 2020:** FL290 and above throughout the ICAO NAT Region.

4. Airspace NOT INCLUDED in NAT Region DLM Airspace

- **ATS Surveillance Airspace.** "ATS Surveillance Airspace" is airspace where surveillance is provided by radar, multilateration, and/or ADS−B **and** VHF voice communications are available. Aircraft must be suitably equipped with transponder/ADS−B Extended Squitter (ES) transmitter).

Note: for planning purposes, a depiction of ATS Surveillance Airspace, where flights are considered to be exempt from the DLM in the NAT Region is provided below in the **"January 2017 Update: ATS Surveillance Airspace Graphic".** See paragraph 10. ATS Surveillance Airspace is also depicted in State AIP's.

- **Airspace north of 80° North.** (Airspace north of 80°N lies outside the reliable service area of geostationary satellites).

- **The New York Oceanic FIR**

- **Tango routes.** When DLM Phase 2B commences on 7 December 2017, aircraft not data link equipped will be allowed to continue to operate on the routes specified below:

  - **T9 and T213.** Aircraft not data link equipped will be allowed to operate on T9 and T213 until solutions to provide ATS surveillance and VHF coverage on those routes are implemented. (When that coverage is provided, the NAT DLM would no longer be applicable to those routes. T213 will be moved to the east in order to provide ATS Surveillance and VHF coverage). ATS surveillance and VHF coverage will be provided on these routes as early as possible, but no later than 30 January 2020.

  - **T16 (until 30 January 2020).**

Note: *aircraft operators using Tango routes within the NAT DLM area of applicability will either complete their fleet upgrades by January 2020 or will not be allowed to operate in DLM airspace.*

5. Flights Allowed To Flight Plan Into NAT Region Phase 2 DLM Airspace. The following flights will be permitted to flight plan to enter the NAT DLM airspace:

a. **Equipped Flights.** Flights equipped with and prepared to operate FANS 1/A (or equivalent) CPDLC and ADS-C data link systems.

b. **Specific Categories of Non-equipped Flights:** Non-equipped flights that file STS/FFR, HOSP, HUM, MEDEVAC SAR, or STATE in Item 18 of the flight plan. (Depending on the tactical situation at the time of flight, however, such flights may not receive an ATC clearance which fully corresponds to the requested flight profile).

6. Operational Policies Applicable To NAT Region Phase 2 DLM Airspace

- **Climb or Descent of Non-equipped Aircraft.** Any aircraft not equipped with FANS 1/A (or equivalent) systems may request a continuous climb or descent without intermediate level off through NAT DLM airspace. Such requests will be considered on a tactical basis.

- **Altitude Reservation (ALTRV) Requests.** ALTRV requests will be considered on a case by case basis (as is done today regarding NAT MNPS airspace), irrespective of the equipage status of the participating aircraft.

- **FANS 1/A (or equivalent) Datalink System Failure Prior to Departure.** If a flight experiences an equipment failure **PRIOR TO DEPARTURE** which renders the aircraft non-DLM compliant, the flight should flight plan so as to remain clear of NAT Regional DLM Airspace.

- **FANS 1/A (or equivalent) Datalink System Failure After Departure.** If a flight experiences an equipment failure **AFTER DEPARTURE** which renders the aircraft unable to operate FANS 1/A (or equivalent) CPDLC and/or ADS-C systems, requests to operate in the NAT DLM Airspace will be considered on a tactical basis. Such flights must notify ATC of their status **PRIOR TO ENTERING** the airspace.

- **FANS 1/A (or equivalent) Datalink System Failure After Entering NAT DLM Airspace.** If a FANS 1/A data link equipment failure occurs while the flight is **OPERATING WITHIN NAT DLM AIRSPACE**, ATC must be immediately advised. Such flights may be re-cleared so as to avoid the airspace, but consideration will be given to allowing the flight to remain in the airspace, based on tactical considerations.

7. European/North Atlantic (EUR/NAT) Interface.

a. Where the NAT interfaces with the EUR Data Link Implementation Rule airspace, procedures will be established by the ANSPs concerned to facilitate the vertical transition of traffic to and from the NAT Region Data Link Mandate and the EUR Data Link Implementation Rule areas. The transition will be conducted as soon as is practicable by the initial EUR Domestic area along the common FIR/UIR boundary bordering the NAT Region Data Link Mandate. For flights exiting the NAT Region DLM airspace, operators and the ANSP's shall ensure that the vertical transition is complete prior to crossing any subsequent FIR/UIR boundary.

8. U.S. Operator Requirement For Operational Authorization To Use FANS 1/A (or equivalent) Data Link Systems.

a. U.S operators are required to obtain operational authorization prior to using FANS 1/A data link systems. U.S. FAA guidance on the process and procedures for operational authorization and aircraft data link system approval can be found in the following documents:

(1) **AC 20-140** (as amended) (Guidelines for Design Approval of Aircraft Data Link Communication Systems Supporting Air Traffic Services (ATS)).

Note: the Inmarsat I3 and Inmarsat I4 Classic Aero sub−networks and Iridium Short Burst Data have been determined to be acceptable for data link services in the NAT Region.

(2) **AC 120-70** (as amended) (Operational Authorization Process for Use of Data Link Communication System)

b. These documents are posted on the "FAA NAT Resource Guide For U.S. Operators" under: COMM/Nav/Surveillance, Data Link Communications. See paragraph 2 above for access to the Resource Guide.

c. The U.S. FAA will grant operational authorization for operators to use FANS 1/A data link by issuing an Operational Specifications or Management Specifications paragraph A056 (Data Link Communications), as appropriate, or a part 91 Letter of Authorization A056 (Data Link Communications).

10. January 2017 Update to NAT "ATS Surveillance Airspace Graphic". The "January 2017 Update: ATS Surveillance Airspace Graphic" updates the depiction of the airspace. **ATS Surveillance Airspace is located in the green shaded areas shown in the graphic.**

(Performance Based Flight Systems Branch, AFS-470, 1/31/17)

January 2017 Update: ATS Surveillance Airspace Graphic - NAT Regional Data Link Mandate Phase 2

Note 1. ATS surveillance and VHF voice coverage is provided at and above FL 300 in the green shaded areas.

Note 2. the blue lines on the map represent the NAT Blue Spruce Routes.

Operational Policy/Procedures for 30 Nautical Mile (NM) Lateral, 30 NM Longitudinal and 50 NM Longitudinal Separation in the Anchorage, Oakland and New York Oceanic Control Areas (CTAs)

1. Applicability and Areas Affected (Date/Time and Area)

1.1 Applicability. The policies, guidance and procedures in this section apply to appropriately authorized and equipped aircraft operating throughout the Anchorage, Oakland and New York Oceanic Control Areas (CTAs), excluding the Anchorage Arctic FIR.

1.2 Date/Time. Since December 2005 Oakland Air Route Traffic Control Center (ARTCC), November 2012 Anchorage ARTCC and beginning in December 2013 New York ARTCC, have applied 30 NM lateral, 30 NM longitudinal and 50 NM longitudinal separation between suitably equipped and authorized pairs of aircraft throughout the respective CTAs/Flight Information Regions (FIRs). The ARTCCs continue to accommodate operators that are not eligible for the reduced separation minima. Published ATS routes and other tracks have not changed. Minimum separation based on ADS-C between aircraft authorized RNP 4 and aircraft authorized Required Navigation Performance 10 (RNP 10) will continue to be 50 NM lateral and 50 NM longitudinal. Lateral and longitudinal separation standards applied between RNP 10 and Non-RNP aircraft also remains unchanged.

2. Requirements for Aircraft and Operators.

2.1 Communication, Navigation and Surveillance Requirements. The combination of RNP values, specified communication capability and necessary surveillance and the associated separation minimum are in table:

CNS Requirements

Separation Minimum	Navigation Requirement	Communications Requirement	ADS-C Surveillance Requirements
50 NM longitudinal	RNP 10	CPDLC	Position report at least every 27 minutes (at least every 32 minutes if both aircraft are approved for RNP-4 operations)
30 NM longitudinal	RNP 4	CPDLC	ADS-C position report at least every 10 minutes (14 minutes in Oakland)
30 NM lateral	RNP 4	CPDLC	ADS-C-based lateral deviation event contract with 5NM lateral deviation from planned routing set as threshold for triggering ADS report of lateral deviation event

2.2 RNP Authorizations and Equipage. For reduced separation to be applied, the aircraft and operator must be authorized by the State of the operator or State of Registry, as appropriate, for the required RNP specification. The aircraft must be equipped with two approved long range navigation systems that will enable the aircraft to maintain the required navigation performance for the duration of flight in the applicable airspace. The aircraft must be equipped with a FANS-1/A package (or equivalent) that includes satellite CPDLC and ADS-C that meets the standards of RTCA DO 258 using ARINC 622 Data Communication Standard. CPDLC communications and ADS-C surveillance must be conducted in accordance with ICAO *Global Operational Data Link Document* (GOLD), as amended, and maintained for the duration of the flight in the applicable CTA. Pilots and, if applicable, dispatchers must be trained on policies and procedures for 30 NM lateral, 30 NM longitudinal and 50 NM longitudinal requirements including the use of satellite CPDLC and ADS-C in oceanic airspace. See the ICAO Document (Doc) 9613, *Performance-based*

Navigation (PBN) Manual and Advisory Circular 90-105A Approval Guidance for RNP Operations and Barometric Vertical Navigation in the U.S. National Airspace System and in Oceanic and Remote Continental Airspace.

NOTE-

Currently RNP4 and RNP 10 are the only navigation specifications applicable to oceanic operations. However, RNP 2 is being developed and once implemented aircraft and operators authorized RNP 2 should be eligible for these reduced separation minima.

2.3 Data Link Operational Authorization. U.S. operators are required to obtain operational authorization prior to using FANS 1/A data link systems. Data link authorizations should be in accordance with FAA AC 20-140 (as amended), *Guidelines for Design Approval of Aircraft Data Link Communication Systems Supporting Air Traffic Services (ATS)* and FAA AC 120-70 (as amended), *Operational Authorization Process for Use of Data Link Communication System.*

3. Flight Planning Requirements:

To inform ATC, and to key Ocean21 automation, that aircraft operators have appropriate operational authorizations and are therefore eligible for 30 NM lateral, 30 NM longitudinal or 50 NM longitudinal separation, operators must annotate their flight plans in accordance with the following table:

Flight Plan Filing Requirements

Item 10a. Radio communication, navigation and approach aid equipment and capabilities: • CPDLC capabilities: J5 (CPDLC FANS 1/A SATCOM (INMARSAT)) and/or J7 (CPDLC FANS 1/A SATCOM(Iridium)), J6 (CPDLC FANS 1/A SATCOM (MTSAT, where applicable) • Navigation: R (PBN approved) (see related Item 18 entry below)
Item 10b. Surveillance equipment and capabilities: • D1 (ADS-C with FANS 1/A capabilities)
Item 18. Other Information: • PBN/L1 (RNP 4) • PBN/A1 (RNP 10) ***NOTE***- If only RNP 10 is filed then separation is limited to 50 NM

4. Special Emphasis Items.

4.1 Weather Contingency Procedure. Weather deviation procedures can be found in ICAO Doc 4444, *Procedures for Air Navigation Services – Air Traffic Management* (PANS-ATM), Chapter 15.2.3. Pilots maneuver (deviate) around convective weather on a regular basis in the course of operations. Weather, therefore, was a major factor considered in establishing the ATC, operator and aircraft requirements for reducing horizontal separation minima to 30 NM. For weather avoidance maneuvers in areas where 30 NM lateral and 30 NM longitudinal separation minima are applied, operators must train the procedures in the ICAO Doc 4444. Emphasis should be placed on the following:

Weather Contingency Items

• In accordance with ICAO Doc 4444, pilots are reminded that, regardless of the magnitude of a deviation from assigned route, whenever possible, clearance should be requested in advance from ATC. This does not apply to deviations associated with Strategic Lateral Offset Procedures (SLOP). Prior coordination with ATC will help prevent the aircraft generating unnecessary alerts to ATC for lateral deviation events.
·Pilots should not assume that the Ocean21 system will quickly detect significant changes to the aircraft flight path. Unlike radar, the Ocean21 system does not receive aircraft position updates in real-time. Aircraft position is updated to the Ocean21 system at intervals of up to 10 minutes, when 30 NM lateral and 30 NM longitudinal separation is applied. Controllers can change the update intervals as the situation warrants.

• It is therefore imperative that pilots keep ATC advised, via CPDLC (or HF voice, if necessary), of their intentions (including significant airspeed changes and/or turbulence conditions) during the initial weather avoidance maneuver and any subsequent maneuvers to avoid convective weather. In order to enhance situational awareness, flight crews should consider broadcasting on 123.45 or 121.5 their intentions to deviate from weather - particularly if an ATC weather deviation is not obtained. This could be a significant event in reduced lateral separation situations.
• Pilots must be aware that other aircraft could be approximately 30NM ahead or behind them on the same track and inform ATC expeditiously of changes to flight path or airspeed that could erode longitudinal separation.
• In particular, for the weather deviation procedures, pilots should be aware of the provision to climb or descend 300 feet (depending on the direction of flight and direction of deviation from track) to mitigate the chance of conflict with other aircraft when forced to deviate without a clearance.
• It is recommended that ACAS be operational for aircraft to which 30 NM lateral and 30 NM longitudinal separation minima can be applied. ACAS is not a separation maintenance tool, but provides valuable data to alert the pilot to the presence and proximity of nearby aircraft in contingency and weather deviation situations.

4.2 15NM Offset Contingency Procedures. Guidance published in ICAO Doc 4444, Chapter 15.2 reflects current ICAO guidance calling for a 15 NM track offset when unable to obtain ATC clearance prior to executing maneuvers for contingencies such as rapid descent, turn-back or diversion. This is of particular importance for aircraft to which 30 NM separation minima can be applied.

4.3 GOLD Procedures for Data Link Operations and Conditional Clearances. A conditional clearance is an ATC clearance given to an aircraft with certain conditions or restrictions such as changing a flight level based on a time or place. Conditional clearances add to the operational efficiency of the airspace. However, conditional clearances have been associated with a large number of pilot deviations. These types of clearances require special attention by the flight crew and operators should develop training material to emphasize proper procedures for executing them accordingly. Resources available for aircrew to properly interpret conditional clearances (and which may assist operators in developing training material) can be found in the ICAO Global Operational Data Link Document (GOLD), Chapter 5 and paragraph 5.3.3. Additionally, the North Atlantic Oceanic Error Safety Bulletin (OESB) provides operators information on procedures and best practices for dealing with conditional clearances. Both the GOLD and the latest version of the OESB can be found in the “NAT Resource Guide for US Operators”. See the web link in paragraph 3.

4.4 Aircraft Navigation or Data Links System Malfunction. Pilots must advise ATC of any loss of CPDLC and/or ADS-C capability or an inability to continue to meet RNP-4. ATC will then apply the separation standard appropriate to the situation.

4.5 Air Traffic System Malfunction. If there is a known malfunction of the CPDLC or ADS-C ground system, ATC will contact aircraft and apply separation appropriate to the situation.

4.6 Verifying correct RNP Values prior to entering oceanic and remote airspace. RNP procedures and routes may require the use of RNAV systems with on−board performance monitoring and alerting. A critical component of RNP is the ability of the aircraft navigation system, in combination with the pilot, to monitor its achieved navigation performance and to identify for the pilot whether the operational requirement is, or is not, being met. Operators conducting oceanic operations must verify the RNP value is properly entered into the FMC, from the flight plan, prior to the aircraft entering oceanic or remote airspace.

4.7 Pilot Report of NonRNP10 or RNP 4 Status. If RNP 10 or RNP 4 approval status is requested by the air traffic controller, the pilot shall communicate approval status using the following phraseology:

RNP 10 or 4 Approval Status

Controller Request	Pilot Response
"(call sign) *confirm RNP 10 or 4 approved*"	"*Affirm RNP 10 approved*" or "*Affirm RNP 4 approved*", as appropriate; or "*Negative RNP 10*"

4.7 Strategic Lateral Offset Procedures (SLOP). Pilots should use SLOP procedures in the course of regular oceanic operations. SLOP procedures are published in ICAO Doc 4444, paragraph 16.5 and. FAA Notices.

4.8 Monitoring Aircraft Navigation. The FAA will monitor and document aircraft navigation errors and system malfunctions. Operators are required to cooperate in follow up investigations of these events. Monitoring is used to verify separation safety and as a means to detect trends in operational practice.

5. Points of contact. If there are questions or requests, one of the following may be contacted:

SPECIAL NOTICE –– NAT ATS MESSAGE FORMAT

The following is submitted in an effort to standardize ATS message formats for air/ground communications in the North Atlantic (NAT) Region:

a. General

1. All NAT air–ground messages are categorized under one of the following headings (excluding emergency messages):

(a) Position Report.

(b) Request Clearance.

(c) Revised Estimate.

(d) Miscellaneous Message.

2. In order to enable ground stations to process messages in the shortest possible time, pilots should observe the following rules:

(a) Use the correct type of message applicable to the data transmitted.

(b) State the message type on the contact call to the ground station or at the start of the message.

(c) Adhere strictly to the sequence of information for the type of message.

(d) All times in each of the messages should be expressed in hours and minutes.

b. Description of ATS Message Types. Aircraft should transmit air−ground messages using standard RTF phraseology in accordance with the following:

1. POSITION. To be used for routine position reports.

CONTENT AND DATA SEQUENCE

(a) "POSITION."

(b) Flight identification.

(c) Present position.

(d) Time over present position (hours and minutes).

(e) Present flight level.

(f) Next position on assigned route.

(g) Estimated time for next position (hours and minutes).

(h) Next subsequent position.

(i) Any further information; e.g., MET data or Company message.

EXAMPLE−
"Position, SWISSAIR 100, 56N 010W 1235, flight level 330, estimating 56N 020W 1310, next 56N 030W"

2. REQUEST CLEARANCE.

(a) To be used, in conjunction with a routine position report, to request a change of mach number, flight level, or route and to request westbound oceanic clearance prior to entering Reykjavik, Santa Maria or Shanwick CTAs.

CONTENT AND DATA SEQUENCE

(1) "REQUEST CLEARANCE."

(2) Flight identification.

(3) Present or last reported position.

(4) Time over present or last reported position (hours and minutes).

(5) Present flight level.

(6) Next position on assigned route or oceanic entry point.

(7) Estimate for next position or oceanic entry point.

(8) Next subsequent position.

(9) Requested Mach number, flight level or route.

(10) Further information or clarifying remarks.

EXAMPLE–
"Request clearance, TWA 801, 56N 020W 1245, flight level 330, estimating 56N 030W 1320, next 56N 040W, requesting flight level 350"

(b) To be used to request a change in Mach number, flight level, or route when a position report message is not appropriate.

CONTENT AND DATA SEQUENCE

(1) "REQUEST CLEARANCE."

(2) Flight identification.

(3) Requested Mach number, flight level or route.

(4) Further information or clarifying remarks.

EXAMPLE–
"Request clearance, BAW 212, requesting flight level 370"

3. REVISED ESTIMATE. To be used to update estimate for next position.

CONTENT AND DATA SEQUENCE

(a) "Revised Estimate."

(b) Flight identification.

(c) Next position on route.

(d) Revised estimate for next position (hours and minutes).

(e) Further information.

EXAMPLE–
"Revised estimate, WDA 523, 57N 040W 0325"

4. MISCELLANEOUS. To be used to pass information or make a request in plain language that does not conform with the content of other message formats. No message designator is required as this will be inserted by the ground station.

CONTENT AND DATA SEQUENCE

(a) Flight identification.

(b) General information or request in plain language and format free.

"When Able Higher" (WAH) Reports

To ensure maximum use of available altitudes, aircraft entering RVSM and/or NAT HLA airspace in the New York FIR should be prepared to advise ATC of the time or position the aircraft can accept the next higher altitude. WAH reports are also used to plan the altitude for aircraft as they transition from RVSM to CVSM altitudes. Therefore it is important that the altitude capability of the aircraft is known by controllers. If the aircraft is capable of a higher altitude that, for whatever reason, is not preferred by the pilot, give the altitude in the WAH report and advise that you prefer not to be assigned that altitude.

The procedures will differ for eastbound and westbound aircraft since many of the eastbound aircraft will enter New York NAT HLA/RVSM airspace from ATC sectors that have direct controller–pilot communications. ATC acknowledgment of a WAH report is NOT a clearance to change altitude.

Eastbound aircraft entering RVSM or NAT HLA airspace in the New York FIR:

Pilots may be requested by ATC to provide an estimate for when the flight can accept the next higher altitude(s). If requested, pilots should provide this information as soon as possible.

Westbound aircraft entering RVSM or NAT HLA airspace in the New York FIR:

Pilots should include in the initial position report the time or location that the next higher altitude can be accepted.

EXAMPLE–
"Global Air 543, 40 north 40 west at 1010, flight level 350, estimating 40 north 50 west at 1110, 40 north 60 west. Next able flight level 360 at 1035."

NOTE–
Pilots may include more than one altitude if that information is available.

EXAMPLE–
(after stating initial report) "Able flight level 360 at 1035, able flight level 370 at 1145, able flight level 390 at 1300."

Mandatory Pilot Reports

In addition to reading back altitude assignments, pilots shall report reaching any altitude assigned within RVSM airspace. This serves as a double check between pilots and controllers and reduces the possibility of operational errors. This requirement for altitude readback and reports of reaching assigned altitudes applies to both RVSM and CVSM altitudes (i.e., flight levels 330, 340, 350, 360, and 370).

EXAMPLE–
(*initial altitude readback*): *"Global Air 543 climbing to flight level 360."*
(upon reaching assigned altitude): "Global Air 543 level at flight level 360."

CARIBBEAN, SOUTH AMERICA, AND GULF OF MEXICO

FDC 2/8646 ZFW TX.. Due to the lack of terrain and obstacle clearance data, accurate automation data bases are not available for providing minimum safe altitude warning information to aircraft overflying Mexico. Air traffic facilities along the United States/Mexico border have inhibited minimum safe altitude warning computer programs for aircraft operating in Mexican airspace until accurate terrain data can be obtained. **(ATP–130 7/29/02)**

FDC 2/8645 ZHU TX.. Due to the lack of terrain and obstacle clearance data, accurate automation data bases are not available for providing minimum safe altitude warning information to aircraft overflying Mexico. Air traffic facilities along the United States/Mexico border have inhibited minimum safe altitude warning computer programs for aircraft operating in Mexican airspace until accurate terrain data can be obtained. **(ATP–130 7/29/02)**

FDC 2/8644 ZAB NM.. Due to the lack of terrain and obstacle clearance data, accurate automation data bases are not available for providing minimum safe altitude warning information to aircraft overflying Mexico. SPECIAL NOTICE –– GULF OF MEXICO COMMUNICATIONS REQUIREMENTS AND POSITION REPORTING WITHIN HOUSTON OCEANIC CONTROL AREA

Position reports and the ability to communicate at any point of the route of flight is vital to the air traffic safety and control process. When flight planning, users are responsible to ensure that they will be capable of

compliance. Inability to comply is in violation of ICAO requirements. The communication requirements for IFR flights within the Houston Oceanic Control Area are:

a. Functioning two−way radio communications equipment capable of communicating with at least one ground station from any point on the route.

b. Maintaining a continuous listening watch on the appropriate radio frequency.

c. Reporting of mandatory points.

The following describes an area in the Houston CTA/FIR where reliable VHF air−to−ground communications below FL180, are not available:

26 30 00N 86 00 00W TO 26 30 00N 92 00 00W

TO 24 30 00N 93 00 00W TO 24 30 00N 88 00 00W

TO 24 00 00N 86 00 00W TO BEGINNING POINT.

Communications within this area are available for all oceanic flights via HF.

The attention of pilots planning flights within the Houston CTA/FIR is directed to the communications and position reports requirements specified in the following ICAO Documents:

ANNEX 2, PARAGRAPHS 3.6.3 AND 3.6.5
ANNEX 11, PARAGRAPH 6.1.2
PANS−RAC 4444, PART 2, PARAGRAPH 14
DOC 7030, CAR, PARAGRAPH 3. **(FAA)**

GULF OF MEXICO RNAV ROUTES Q100, Q102, AND Q105

This NOTAM defines RNAV equipment requirements for operators filing Q100, Q102, and Q105 through Gulf of Mexico airspace. Only aircraft approved for IFR Area Navigation operations will be cleared to operate on Q100, Q102, and Q105 between the surface and FL600 (inclusive).

Operator Determination of RNAV Equipment Eligibility

In accordance with Federal Aviation Regulations 91.511, 121.351, 125.203, and 135.165 (as applicable) an approved Long-Range Navigation System (INS, IRS, GPS or Loran C) is required for operation on these routes.

In addition, operators will not flight plan or operate on these routes unless their aircraft are equipped with RNAV systems that are approved for IFR navigation and the pilots are qualified to operate them. Aircraft may be considered eligible to operate on these routes if they fall under one of the following categories:

a. For new installations, the Airplane Flight Manual must show that the navigation system installation has received airworthiness approval in accordance with one of the following FAA ACs:

1. AC 20-138, as amended (Airworthiness Approval of Positioning and Navigation Systems).

2. AC 25-15 (Flight Management System [FMS] approval).

b. Installations that have previously received airworthiness approval under the following ACs are eligible for Gulf of Mexico Q-route operation provided it is shown in the Airplane Flight Manual:

1. AC 90-45A (RNAV system approval).

2. AC 20-130, as amended (Multi-Sensor Navigation system approval).

NOTE *- INS LIMITATIONS. See paragraph f, below.*

Operational Requirements and Procedures

a. Class I Navigation: operations on Q100, Q102 and Q105 will continue to be categorized as Class I navigation, as defined in FAA Order 8900.1, Vol. 4, Chapter 1, Section 3, Class I Navigation.

b. Operations Specifications: operators are considered eligible to conduct operations on the Q-routes provided that aircraft are equipped with the appropriate equipment in accordance with the "Operator Determination of RNAV Equipment Eligibility" paragraph above and operations are conducted in accordance with paragraph (c), (d), (e) and (f) below. Title 14 CFR Parts 121, 125, 135 operators are authorized to operate on the Q-routes when they are issued Operations Specifications (OpSpecs) paragraph B034 (Class I Navigation Using Area Navigation Systems). In addition, OpSpecs B034 must be annotated in OpSpecs paragraph B050 (Enroute Authorizations, Limitations and Procedures), for the Gulf of Mexico High Offshore Airspace.

c. Pilots in command filing on RNAV routes are certifying that the crews and equipment are qualified to conduct RNAV operations.

d. Pilots in command shall be responsible for navigating along route centerline (as defined by the aircraft navigation system) in accordance with the requirements of Title 14 CFR 91, section 181 (course to be flown) and ICAO Annex 2, paragraph 3.6.2.1.1. (Annex 2, paragraph 3.6.2.1 states that flights shall "in so far as practical, when on an established ATS route, operate on the defined centerline of that route.")

e. Pilots in command shall notify the Air Route Traffic Control Center (ARTCC) of any loss of navigation capability that affects the aircraft's ability to navigate within the lateral limits of the route.

f. INS or IRS LIMITATION. For the purposes of operating on the following RNAV routes, Q100, Q102, and Q105, aircraft equipped with Inertial Navigation Systems (INS) or Inertial Reference Systems (IRS) that cannot receive automatic position updates (e.g., DME/DME update) for the entire length of the route, are limited to 1.5 consecutive hours of un-updated operation. In preparation for take-off, this time starts at the time that the INS or IRS is placed in the navigation mode. En route, the maximum time allowed between automatic position updates is 1.5 hours. Systems that perform updating after the pilot has manually selected the navigation aid are considered to have "automatic update" capability.

g. Radar monitoring will normally be provided. In the event of loss of radar, aircraft will be advised. ATC will ensure that the appropriate nonradar separation is applied during these time periods.

MIAMI CTA/FIR Havana CTA/FIR –– Miami CTA/FIR

Aircraft on IFR flight plans entering the Miami CTA/FIR from the Havana CTA/FIR are requested to establish communication with Miami Oceanic CTA/FIR on the frequencies listed below for airways/direct routes:

between 7810W–7536W 127.22 VHF/239.02 UHF

between 7536W–7320W 123.77 VHF/256.80 UHF

Aircraft must contact Miami ARTCC 10 minutes prior to reaching the Miami CTA/FIR Boundary.

NOTE–
This information should appear on all applicable Domestic and Latin American High/Low En Route Charts.

RADAR SEPARATION

Miami ARTCC and Havana Center. Aircraft predominantly use radar procedures. High altitude aircraft should anticipate radar services.

Miami ARTCC utilizes secondary radar systems from antennas located on the island of Grand Turk, Great Exuma Island and Nassau in the Bahamas. IFR aircraft within 200 NM of the antenna above FL130 can expect radar separation from other IFR aircraft. Radar service may be provided below FL130 by Miami Center to those participating aircraft within the antenna coverage.

Redundancy in radar coverage occurs above FL240, from the Tamiami radar antenna in South Florida, through the Bahamas and Turks & Caicos Island, to the radar systems in Puerto Rico.

There is no primary radar data or weather information available from the Grand Turk, Great Exuma and Nassau radar systems. Since radar separation is dependent upon the receipt of transponder returns, all aircraft within antenna coverage of either system are required to squawk transponder codes as assigned by ATC, or, if none assigned, squawk the appropriate stratum code.

Aircraft departing and overflying the Santo Domingo and Port Au Prince FIRs that will enter Miami ARTCC FIR can expect ATC assigned codes from those agencies. If a code is not assigned by either Santo Domingo or Port Au Prince, pilots should request a code. The assigned codes should be squawked prior to crossing the Miami CTA/FIR boundary north or west bound. Initial call up to Miami Center prior to crossing the CTA/FIR boundary will permit early radar identification. Radar flight following of VFR aircraft is available on a workload permitting basis. The primary ATC frequency is as follows: Grand Turk area 126.45 and 307.2 or secondary is 135.2 and 327.0; Great Exuma area 127.22 and 239.02 and Nassau are 125.7 and 307.9.

Aircraft on IFR flight plan entering Miami CTA/FIR from Port Au Prince or Santo Domingo CTA/FIR contact Miami ARTCC at least 10 minutes prior to reaching Miami CTA/FIR boundary. **(FAA)**

FLIGHT PLANNING INTO OR THROUGH THE MIAMI CTA/FIR AND SAN JUAN CTA/FIRs

In an effort to eliminate erroneous or duplicate flight plans (FPLs) that may be received from various filers, and to increase the safety of flight within the Miami and San Juan CTA/FIRs, operators must adhere to the following procedures when filing flight plans for flights originating in foreign aerodromes and entering the United States National Airspace System:

a. All FPL amendments (CHG message) to an IFR flight must be submitted as soon as possible to the Air Traffic Service unit having authority for the departure aerodrome.

b. A Cancel (CNL) messages must be sent PRIOR to resubmitting a new FPL for the same flight..

These references are contained in ICAO DOC 4444 and FAAO 7210.3, *Facility Operation and Administration*. Operators should be aware that failure to adhere to these procedures could result in an operational delay or pilot deviation.

If you have any questions, please do not hesitate to call the Miami Center Flight Data at 1650/1731/1648. **(ZMA 8/1/13)**

SPECIAL NOTICE −−INSPECTION OF MEANS OF CONVEYANCE FOR AIRCRAFT MOVING TO GUAM

Inspection of aircraft moving to Guam. Any person who has moved an aircraft from Puerto Rico or the Virgin Islands of the United States to Guam shall contact an inspector and offer the inspector the opportunity to inspect the aircraft upon the aircraft's arrival in Guam, unless the aircraft has been inspected and cleared in Puerto Rico or the Virgin Islands prior to departure in accordance with arrangements between the operator of the aircraft, the Animal and Plant Health Inspection Service, and the government of Guam. **(USDA Regulation 318.58−9)**

50 NM Lateral Separation Within Anchorage Arctic FIR

Policy and Procedures

Introduction. Throughout the Anchorage Arctic Flight Information Region (FIR) the FAA applies 50 nautical mile (NM) lateral separation between aircraft authorized to operate under Required Navigation Performance (RNP) 10 or 4 navigation specifications. This notice explains related policies and procedures pertaining to operations in the Anchorage Arctic FIR.

Separation Standards. Within the Anchorage Arctic FIR 50 NM lateral separation will be applied between any two aircraft for which flight plans indicate capability for RNP 10 or RNP 4. ATC will space any aircraft without RNP 10 or RNP 4 capability such that at least 90 NM lateral separation is maintained with other aircraft.

- 50 NM lateral separation is not provided on Northern Control Area tracks and laterals, nor on user preferred routes (UPR) unless restricted by NOTAM.

Accommodating non−RNP 10 aircraft. Operators intending to fly within the Anchorage Arctic FIR who are not authorized at least RNP 10 must include, in Item 18 of their flight plan, the annotation "RMK/NONRNP10." Operators of such aircraft may file for any route and altitude within the FIR. Clearance on preferred routes and altitudes will be provided as traffic allows for 90 NM lateral separation between that aircraft and any others. Priority will be given to RNP 10 or RNP 4 aircraft. Pilots of non−RNP 10 aircraft are to remind ATC of their RNP status, i.e. report "Negative RNP 10:"

- Prior to entering Anchorage Arctic FIR
- In reading back a clearance to descend from FL 410 within the Anchorage Arctic FIR

Note: Operators will likely benefit from the effort they invest to obtain RNP 10 or RNP 4 authorization, provided they are flying aircraft equipped to meet RNP 10 or RNP 4 standards.

Obtaining RNP 10 or RNP 4 operational authorization. For U.S. operators, Advisory Circular (AC) 90−105 provides the aircraft and operator qualification criteria for RNP 10 and RNP 4 authorizations. FAA personnel at certificate management offices and flight standards district offices will use the guidance

contained on AC 90−105 to evaluate an operator's application for RNP 10 or RNP 4 authorization. ICAO Document 9613 *Performance Based Navigation (PBN) Manual* establishes RNP authorization policies applicable to all ICAO member states. Operators can find "job aids" and other information that should help with the RNP authorization process on the FAA's *Pacific Resource Guide for U.S. Operators* available at the following link:

https://www.faa.gov/about/office_org/headquarters_offices/avs/offices/afs/afs400/afs470/media/PAC.pdf

Note: The operator's RNP 10 or RNP 4 authorization should include any equipment requirements (e.g. dual long−range navigation systems) and any RNP 10 time limits (if operating solely inertial−based navigation systems) that must be observed when conducting RNP operations. RNP 4 requires tighter navigation and track maintenance accuracy than RNP 10. RNP 4 requires use of GNSS.

Flight Plan Requirements. In order for an operator with RNP 10 or RNP 4 authorization to obtain 50 NM lateral separation within the Anchorage Arctic FIR, and therefore obtain routing available to RNP authorized aircraft, the flight plan must be annotated as follows:

- Item 10a (Equipment) must include the letter "R"
- Item 18 must include either "PBN/A1" for RNP 10 authorization or "PBN/L1" for RNP 4 authorization.

Indication of RNP 4 authorization implies the aircraft and pilots are also authorized RNP 10.

Note: The FAA's Aeronautical Information Manual (AIM), chapter 5, section 1, includes information on all flight plan codes.

Contingency procedures. Pilots operating under reduced lateral separation must be particularly familiar with, and prepared to rapidly implement, the standard contingency procedures specifically written for operations when outside ATC surveillance and direct VHF communications (e.g. the oceanic environment). Specific procedures have been developed for weather deviations. Operators should ensure all flight crews operating in this type of environment have been provided the standard contingency procedures in a readily accessible format. The margin for error when operating at reduced separation mandates correct and expeditious application of the standard contingency procedures. These standard, internationally accepted procedures are published in ICAO Document 4444, *Procedures for Air Navigation Services – Air Traffic Management*, chapter 15. The procedures are also provided in the U.S. Aeronautical Information Publication (AIP) section ENR 7.3, and the FAA's AC 91−70 *Oceanic and Remote Continental Airspace Operations*.

Operators may find information and recommended procedures to follow in the event of degraded navigation capability in the FAA's Chart Supplement Alaska, Notices section, under *Navigation Procedures*.

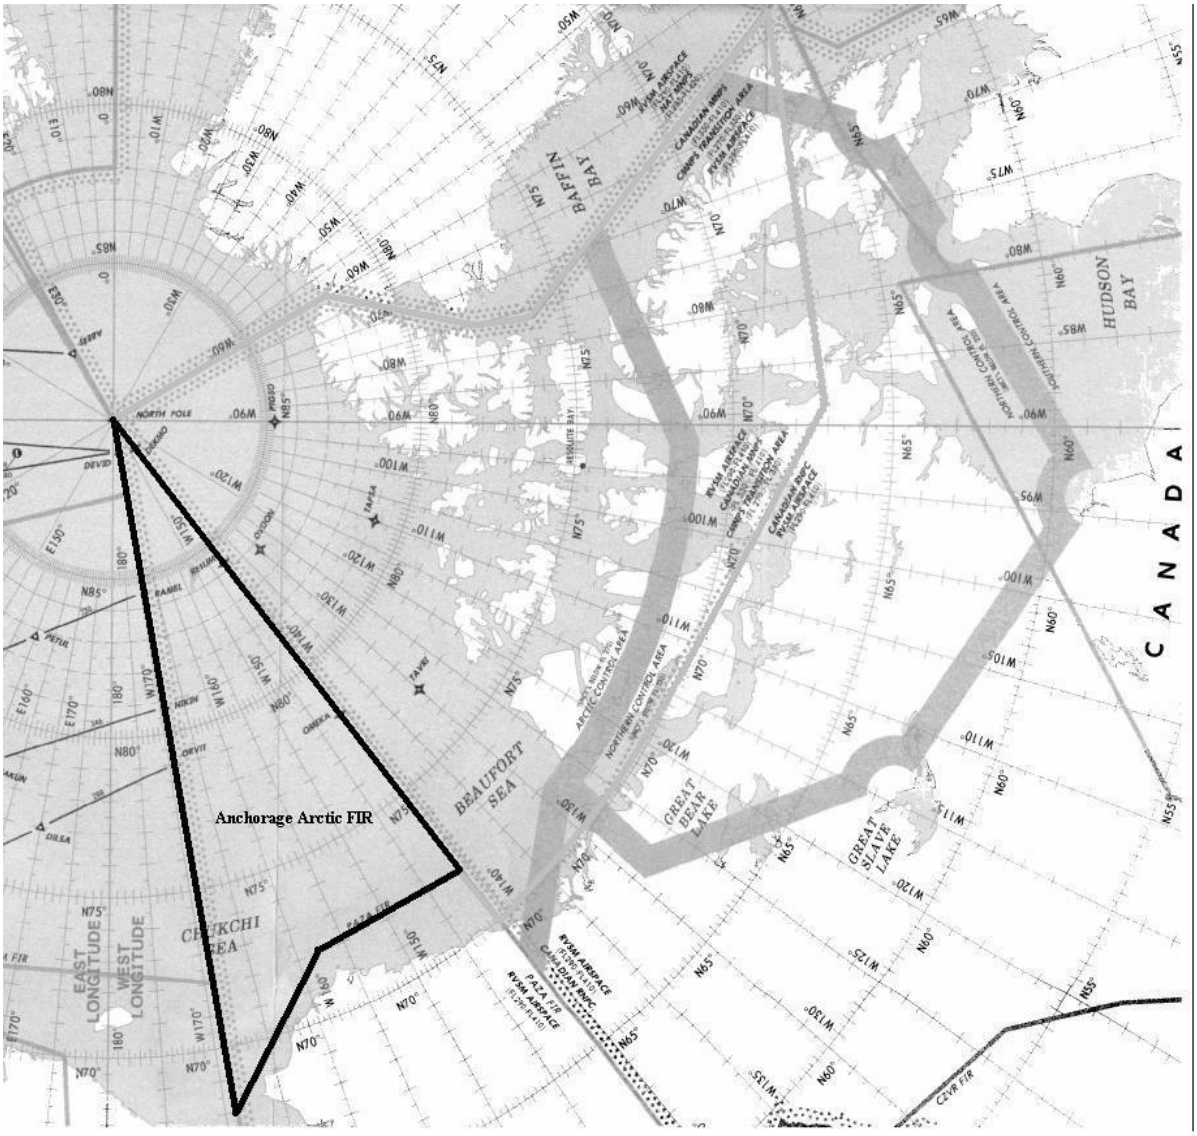

Strategic Lateral Offset Procedures (SLOP). Pilots should use SLOP in the course of regular operations within the Anchorage Arctic FIR. SLOP procedures and limitations are published in the Chart Supplement Alaska, the U.S. AIP, AC 91−70, and ICAO Document 4444.

Points of Contact. Operators may contact one of the following individuals to address questions specific to 50 NM lateral separation in the Anchorage Arctic FIR:

- Beth Luciotti, AJV−84, 202−267−0619, Beth.L.Luciotti@faa.gov
- Madison Walton, AFS−470, 202−267−8850, Madison.Walton@faa.gov
- Mark Wisniewski, SAIC (supporting AFS−400), 202−267−8843, mark.ctr.wisniewski@faa.gov

(AJV−84 and AFS−470, revision 2/2/2017)

Section 1. General

COLD TEMPERATURE RESTRICTED AIRPORTS

Aug 17, 2017

Cold Temperature Altitude Corrections

Subject: Cold temperature altitude corrections at airports with a published cold temperature restriction.

Purpose: 1. To provide an updated list of 14 CFR Part 97 Cold Temperature Restricted Airports (CTRA) and segments designated with a temperature restriction; 2. Describe how to calculate and apply altitude corrections during cold temperature operations; 3. Describe the two methods, All Segments Methods and NTAP Segment(s) Method, which operators are allowed to use when making cold temperature altitude corrections.

This list may also be found at the bottom of the, "Terminal Procedures Basic Search" page. http://www.faa.gov/air_traffic/flight_info/aeronav/digital_products/dtpp/search/

Background: In response to aviation industry concerns over cold weather altimetry errors, the FAA conducted a risk analysis to determine if current 14 CFR Part 97 instrument approach procedures, in the United States National Airspace System, place aircraft at risk during cold temperature operations. This study applied the coldest recorded temperature at the given airports in the last five years and specifically determined if there was a probability that during these non−standard day operations, anticipated altitude errors in a barometric altimetry system could exceed the Required Obstacle Clearance (ROC) used on procedure segment altitudes. If a probability, of the ROC being exceeded, went above one percent on a segment of the approach, a temperature restriction was applied to that segment. In addition to the low probability that these procedures will be required, the probability of the ROC being exceeded precisely at an obstacle position is extremely low, providing an even greater safety margin.

The CTRA risk analysis was only performed on airports of 2500 ft. and greater due to database constraints. Pilots must calculate a cold temperature altitude correction at any airport included in the airports list below. Pilots operating into an airport with a runway length less than 2500 feet may make a cold temperature altitude correction in cold temperature conditions, if desired. Pilots must advise ATC with the corrected altitude when applying altitude corrections to any approach segment other than the final segment.

All Segments Method: Pilots may correct all altitudes from the IAF altitude to the missed approach final holding altitude. Pilots familiar with the NTAP procedure for making altitude corrections and choosing to use the All Segments Method are only required to use the published "snowflake" icon,  /CTRA temperature limit on the approach chart for making corrections and do not need to reference the restricted airports list in this NTAP. Calculations will be made based on the altitude at the Final Approach Fix (FAF)/Precision Final Approach Fix (PFAF), the Minimum Descent Altitude or Decision Altitude (DA) and the Missed Approach (MA) final holding altitude. The calculations made at these fixes will be used to make altitude corrections on the other fixes in the applicable approach segment(s).

NTAP Segment(s) Method: Pilots may correct only the required segment(s) indicated in this NTAP's restricted airports list. Pilots using the NTAP Segment(s) Method will need to reference the NTAP restricted airports list to determine which segment(s) require a correction. Calculations will be made based on the altitude at the Final Approach Fix (FAF)/Precision Final Approach Fix (PFAF), the Minimum Descent Altitude or Decision Altitude (DA) and the Missed Approach (MA) final holding altitude. The calculations made at these fixes will be used to make altitude corrections on the other fixes in the applicable approach segment(s).

Actions:

When and where to correct: Pilots must make an altitude correction to the published, "at", "at or above" and "at or below" altitudes on all designated segment(s), for all published procedures and runways when the reported airport temperature is at or below the published airport cold temperature restriction on the approach plate. Pilots must advise ATC when correcting on any segment of the approach other than the final segment. Reference the **How to Apply Cold Temperature Altitude Corrections on an Approach** for examples and additional information.

Affected Airports: Cold Temperature Restricted Airports are identified by a "snowflake" icon (❄) and temperature limit, in Celsius, on U.S. Government approach charts or a "textual" Note published on commercial charting publications. The NTAP will maintain the list of airports and segment(s) affected. Pilots correcting all segments will need only to use the instrument approach chart to determine whether the approach requires a cold temperature altitude correction.

Altitudes not corrected: ATC will not apply a cold temperature correction to Minimum Vectoring Altitudes (MVA). Pilots must be cleared by ATC to apply a cold temperature compensation to an ATC assigned altitude or when flying on a radar vector in lieu of a published missed approach procedure. Pilots must not correct altitudes published on Standard Instrument Departures (SIDs), Obstacle Departure Procedures (ODPs) and Standard Terminal Arrivals (STARs).

Use of corrected MDA/DA: Pilots must use the corrected Minimum Descent Altitude (MDA) or Decision Altitude/ Decision Height (DA) as the minimum for an approach. Pilots must meet the requirements in 14 CFR Part 91.175 in order to operate below the corrected MDA or DA. Pilots must see and avoid obstacles when descending below the MDA.

Methods for Calculating Altitude Corrections: Pilots of aircraft **not equipped with** an RNAV system capable of temperature compensation must use the AIM 7−2−3, ICAO Cold Temperature Error Table to calculate a cold temperature altitude correction. The calculations for the approach will be calculated from three points on the approach:

NOTE: For the purpose of this procedure, when the FAF is referenced, it is the FAF altitude or the PFAF/Glideslope intercept altitude.

1 The FAF/PFAF will be used to calculate the correction to be applied to all altitudes from the FAF/PFAF:
   a. Up to but not including the intermediate fix (IF) altitude for the NTAP Segment(s) Method
   b. Up to and including the initial approach fix (IAF) for the All Segments Method
2 The published MDA or DA will be used to calculate the correction to be applied to all altitudes in the final approach segment as applicable.
3 The final missed approach (MA) holding altitude will be used to calculate the correction to be applied to the final missed approach holding altitude only.

NOTE: Pilots may use Real Time Mesocscale Analysis (RTMA): Alternate Report of Surface Temperature, for computing altitude corrections, when airport temperatures are not available via normal reporting. See InFO 15006 for additional information, http://www.faa.gov/other_visit/aviation_industry/airline_operators/airline_safety/info/all_infos/media/2015/info15006.pdf.
The RTMA website is http://nomads.ncep.noaa.gov/pub/data/nccf/com/rtma/prod/airport_temps/

Pilots of aircraft **equipped with** an RNAV system capable of temperature compensation, and choosing to use this system, must ensure the system is active and operating. If the system is not operating, or not being used, the pilot must manually calculate and apply a cold weather altitude correction using the AIM 7−2−3, ICAO

Cold Temperature Error Table. The MDA/DA and step down fixes in the final segment will still require a manual correction.

PILOTS MUST NOT MAKE AN ALTIMETER CHANGE to accomplish an altitude correction. Pilots must ensure that the altimeter is set to the current altimeter setting provided by ATC in accordance with 14 CFR §91.121.

ICAO COLD TEMPERATURE ERROR TABLE
HEIGHT ABOVE AIRPORT IN FEET

REPORTED TEMP °C	200	300	400	500	600	700	800	900	1000	1500	2000	3000	4000	5000
+10	10	10	10	10	20	20	20	20	20	30	40	60	80	90
0	20	20	30	30	40	40	50	50	60	90	120	170	230	280
-10	20	30	40	50	60	70	80	90	100	150	200	290	390	490
-20	30	50	60	70	90	100	120	130	140	210	280	420	570	710
-30	40	60	80	100	120	140	150	170	190	280	380	570	760	950
-40	50	80	100	120	150	170	190	220	240	360	480	720	970	1210
-50	60	90	120	150	180	210	240	270	300	450	590	890	1190	1500

Acceptable Use of Table:
Pilots may calculate a correction with a visual interpolation of the chart when using reported temperature and height above airport. This calculated altitude correction may then be rounded to the nearest whole hundred or rounded up. I.e., a correction of 130 ft. from the chart may be rounded to 100 ft. or 200 ft. A correction of 280 ft. will be rounded up to 300 ft. This rounded correction will be added to the FAF, all step−down fixes outside of the FAF and the IAF altitudes. The correction calculated from the MDA or DA may be used as is, rounded up, but never rounded down. This number will be added to the MDA, DA and all step−down fixes inside of the FAF as applicable.

No extrapolation above the 5000 ft. column is required. Pilots may use the 5000 ft. “height above airport in feet” column for calculating corrections when the published altitude is greater than 5000 ft. above reporting station elevation. Pilots must add the correction(s) from the table to the affected segment altitude(s) and fly at the new corrected altitude.

It is important to understand that the correction from the table will place the aircraft back to an altitude based on a standard day. Although the techniques adopted in this NTAP to use the FAF altitude and MDA to correct the affected segment altitudes may not place the aircraft back to a standard day altitude on all fixes, a safe obstacle clearance will be maintained. These techniques have also been adopted to minimize the number of entries into the table while making corrections required by the pilot.

Additional Temperature Restrictions on IAP Charts: The charted temperature restriction for “uncompensated baro−VNAV systems” on 14 CFR Part 97 RNAV (GPS) and RNAV (RNP) Authorization Required (AR) approach plates is independent of the temperature restriction established at a “Cold Temperature Restricted Airport”. The charted temperature restriction for an uncompensated baro−VNAV system is applicable when the LNAV/VNAV line of minima is used on an RNAV (GPS) approach. The temperature restriction for an uncompensated baro−VNAV system on an RNAV (RNP) AR approach applies to the entire procedure. Aircraft without a compensating baro−VNAV system may not use the LNAV/VNAV line of minima on the RNAV (GPS) approach when the actual temperature is above or below the charted \baro−VNAV temperature restriction. For aircraft without a compensating baro−VNAV system, the RNAV (RNP) AR approach is not

authorized when the actual temperature is above or below the charted baro−VNAV temperature restriction. In all cases, a cold temperature altitude correction must be applied when the actual temperature is at or below the cold temperature restricted airport temperature restriction.

How to Apply Cold Temperature Altitude Corrections on an Approach:

NTAP Segment(s) method:

Step 1: Determine if there is a published "snowflake" icon, /CTRA temperature limit on the approach chart.

Step 2: If the reported airport temperature is at or below the published CTRA temperature limit, apply cold temperature altitude corrections to all published altitudes, on the affected segments, listed in Cold Temperature Restricted Airports List found in this NTAP.

A Aircraft not equipped with a temperature compensating RNAV system or not using the system will make a manual correction using ICAO Cold Temperature Error Table.

- Intermediate Segment: All altitudes from the FAF/PFAF up to but not including the intermediate fix (IF) altitude. Calculate correction by taking FAF/PFAF altitude and subtracting the airport elevation. This number will be used to enter the height above airport in the ICAO table until reaching the reported temperature. Round this number as applicable and then add to FAF altitude and all step−down altitudes.

- Final segment: Calculate correction by taking the MDA or DA for the approach being flown and subtract the airport elevation. This number will be used to enter the height above airport in the ICAO table until reaching the reported temperature. Use this number or round up. Add this number to MDA or DA/DH, as applicable, and any applicable step−down fixes in the final segment.

- Missed Approach Segment: Calculate the correction by taking the final missed approach (MA) holding altitude and subtract the airport elevation. This number will be used to enter the height above airport in the ICAO table until reaching the reported temperature. Round this number as applicable and then add to the final MA altitude only.

B If flying an aircraft equipped with a RNAV system capable of temperature compensation, follow the instructions for applying temperature compensation provided in the AFM, AFM supplement, or RNAV system operating manual. Ensure that temperature compensation is active on the segment being corrected. Manually calculate an altimetry correction for the MDA or DA. Determine an altimetry correction from the ICAO table based on the reported airport temperature and the height difference between the MDA or DA, as applicable, and the airport elevation.

NOTE: Some RNAV systems apply temperature compensation only to those altitudes associated with an instrument approach procedure loaded into the active flight plan while other systems apply temperature compensation to all procedure altitudes or user entered altitudes in the active flight plan, including altitudes associated with a STAR. For those systems that apply temperature compensation to all altitudes in the active flight plan, delay activating temperature compensation until the aircraft has passed the last altitude constraint associated with the active STAR.

Step 3: For RNAV (GPS) approaches flown to the LNAV/VNAV line of minima using baro−VNAV vertical guidance, determine if there are published uncompensated baro−VNAV temperature limits. If the reported airport temperature is above or below the published limits, do not use the LNAV/VNAV line of minima unless

the RNAV system is capable of temperature compensation and the system is active. Use an alternative line of minima (e.g., LNAV). CTRA correction must still be made on this approach if applicable.

Step 4: For RNAV (RNP) AR approaches, determine if there are uncompensated baro−VNAV temperature limits published on the approach. If the reported airport temperature is above or below the published temperature limits, the RNP (AR) approach may not be flown.

NOTE: When executing an approach with vertical guidance at a CTRA airport (i.e., ILS, LPV, LNAV/VNAV), pilots are reminded to follow the glideslope/glidepath as published when it is intersected inbound on the approach at the corrected altitude. The ILS glideslope and WAAS generated glidepath are unaffected by cold temperatures and will be provide reliable vertical guidance to the corrected DA/DH. A baro−VNAV generated glidepath will be affected by cold temperatures and must be corrected when at or below the published temperature limit and using the LNAV/VNAV line of minima to DA/DH.

All Segments Method: All segments corrected from IAF through MA holding altitude:

Step 1: Determine if there is a published "snowflake" icon, /CTRA temperature limit on the approach chart.

Step 2: If the reported airport temperature is at or below the published CTRA temperature limit, apply cold temperature altitude corrections to all published altitudes from the IAF altitude to the MA final holding altitude.

A. Aircraft not equipped with a temperature compensating RNAV system or not using that system (use manual correction).

- All altitudes from the FAF/PFAF up to and including the IAF altitude: Calculate correction by taking FAF/PFAF altitude and subtracting the airport elevation. This number will be used to enter the height above airport in the ICAO table until reaching the reported temperature. Round this number as applicable and then add to all altitudes from the FAF altitude through the IAF altitude.

- All altitudes in final segment: Calculate correction by taking the MDA or DA for the approach being flown and subtract the airport elevation. This number will be used to enter the height above airport in the ICAO table until reaching the reported temperature. Use this number or round up. Add this number to MDA or DA/DH, as applicable, and any applicable step−down fixes in the final segment.

- Final holding altitude in the Missed Approach Segment: Calculate the correction by taking the final missed approach (MA) holding altitude and subtract the airport elevation. This number will be used to enter the height above airport in the ICAO table until reaching the reported temperature. Round this number as applicable and then add to the final MA altitude only.

B. If flying an aircraft equipped with a RNAV system capable of temperature compensation, follow the instructions for applying temperature compensation provided in the AFM, AFM supplement, or RNAV system operating manual. Ensure that temperature compensation is active prior to the IAF and remains active through the entire approach. Manually calculate an altimetry correction for the MDA or DA. Determine an altimetry correction from the ICAO table based on the reported airport temperature and the height difference between the MDA or DA, as applicable, and the airport elevation.

NOTE: Some RNAV systems apply temperature compensation only to those altitudes associated with an instrument approach procedure loaded into the active flight plan while other systems apply

temperature compensation to all procedure altitudes or user entered altitudes in the active flight plan, including altitudes associated with a STAR. For those systems that apply temperature compensation to all altitudes in the active flight plan, delay activating temperature compensation until the aircraft has passed the last altitude constraint associated with the active STAR.

Step 3: For RNAV (GPS) approaches flown to the LNAV/VNAV line of minima using baro−VNAV vertical guidance, determine if there are published uncompensated baro−VNAV temperature limits. If the reported airport temperature is above or below the published limits, do not use the LNAV/VNAV line of minima unless the RNAV system is capable of temperature compensation and the system is active. Use an alternative line of minima (e.g., LNAV). CTRA correction must still be made on this approach if applicable.

Step 4: For RNAV (RNP) AR approaches, determine if there are uncompensated baro−VNAV temperature limits published on the approach. If the reported airport temperature is above or below the published temperature limits, the RNP (AR) approach may not be flown.

NOTE: When executing an approach with vertical guidance at a CTRA airport (i.e., ILS, LPV, LNAV/VNAV), pilots are reminded to follow the glideslope/glidepath as published when it is intersected inbound on the approach at the corrected altitude. The ILS glideslope and WAAS generated glidepath are unaffected by cold temperatures and will be provide reliable vertical guidance to the corrected DA/DH. A baro−VNAV generated glidepath will be affected by cold temperatures and must be corrected when at or below the published temperature limit and using the LNAV/VNAV line of minima to DA/DH.

Communication: Pilots must report cold temperature corrected altitudes to ATC whenever applying a cold temperature altitude correction. Pilots do not need to inform ATC of the final approach segment correction (i.e., new MDA or DA/DH). This report should be provided on initial radio contact with the ATC facility issuing approach clearance. ATC requires this information in order to ensure appropriate vertical separation between known traffic. Pilots should query ATC when vectored altitudes to a segment are lower than the requested corrected altitude. Pilots are encouraged to self−announce corrected altitude when flying into non−towered airfields.

The following are examples of appropriate pilot−to−ATC communication when applying cold−temperature altitude corrections.

- On initial check−in with ATC providing approach clearance: Hayden, CO (example below).
    - Vectors to final approach course: Outside of PICIN: "*Request 12000 ft. for cold temperature operations."*
    - Vectors to final approach course: Inside of PICIN: *"Request 10500 ft. for cold temperature operations.*"
    - Missed Approach segment: "*Require final holding altitude, 10500 ft. on missed approach for cold temperature operations.*"

- Pilots cleared by ATC for an instrument approach procedure; "Cleared the RNAV RWY 28 approach (from any IAF)". Hayden, CO (example below).
    - IAF: "*Request 13500 for cold temperature operations at TUSKK, TILLI or HIPNA*"

For additional information contact Kel Christianson, AFS−470, at 202−267−8838.

Cold Temperature Restricted Airports: Airports are listed by ICAO code, Airport Name, Temperature Restriction in Celsius. The temperature will be indicated on Airport IAPs next to a snowflake symbol, ❄–XX°C in the United States Terminal Procedure Publication (TPP).

Additional Information: The following military airfields meet the criteria to be identified as a Cold Temperature Restricted Airport using the FAA cold temperature model. USAF, USA, USM, USN and USCG are not required to adhere to the procedures found in this NTAP at these airfields. This information is applicable to FAA authorized operators operating into these airfields.

See the following examples for identifying and applying altitude corrections.

Hayden/Yampa Valley (KHDN). Reported Temperature –24° C: RNAV (GPS) RWY 28.

NTAP Segment(s) method: Intermediate, final and missed approach required.

Uncompensated Baro–VNAV System or Manual Method:

1 Cold Temperature Restricted Airport Temperature Limit: –24° C
2 Altitude at the Final Approach Fix (FAF) (BEEAR) = 10000 ft.
3 Airport elevation = 6606 ft.
4 Difference: 10000 ft. – 6606 ft. = 3394 ft.
5 Use the AIM 7–2–3 ICAO Cold Temperature Error Table for a height above airport of 3394 ft. and –24° C. Visual interpolation is approximately 500 ft. Actual interpolation is 546 ft. Add 500 ft. to the FAF altitude and all applicable altitudes outside of the FAF up to but not including IF altitude:
   - BEEAR (FAF): 10000 + 500 = 10500 ft.
   - PICIN (stepdown fix): 11500 + 500 = 12000 ft.
6 Correct altitudes within the final segment altitude based on the minima used, which is the LP MDA = 7080 ft.
7 Difference: 7080 ft. – 6606 ft. = 474 ft.
8 AIM 7–2–3 Table: 474 ft. at –24C is approximately 80ft. Use 80 ft. or round up to 100 ft.
9 Add corrections to altitudes up to but not including the FAF:
   - DICEV (stepdown fix): 8400 + 80 = 8480 ft.
   - BUYYA (stepdown fix): 7860 + 80 = 7940 ft.
   - LP MDA: 7080 + 80 = 7160 ft.
10 Correct MEKWY/Missed Approach Holding Altitude: MA altitude is same as BEEAR (10000); therefore, the same table calculation in step 5 may be used at MEKWY. Take 500 ft. correction for 10000 ft. and add to MA holding altitude:

- MEKWY: 10000 + 500 = 10500 ft.

Compensated Baro−VNAV System:
Operators using a temperature compensating RNAV system to make altitude corrections will set the current airport temperature (−24° C) and activate the system for the required segment(s). A manual calculation of the cold temperature altitude correction is required for the MDA/DA. Although using the temperature compensating system should provide clearance over step−down fixes on any segment, a correction will be added to all applicable step−down fixes and monitored during descent to ensure aircraft will be "at" or "above" the corrected step−down fix altitude during the approach.

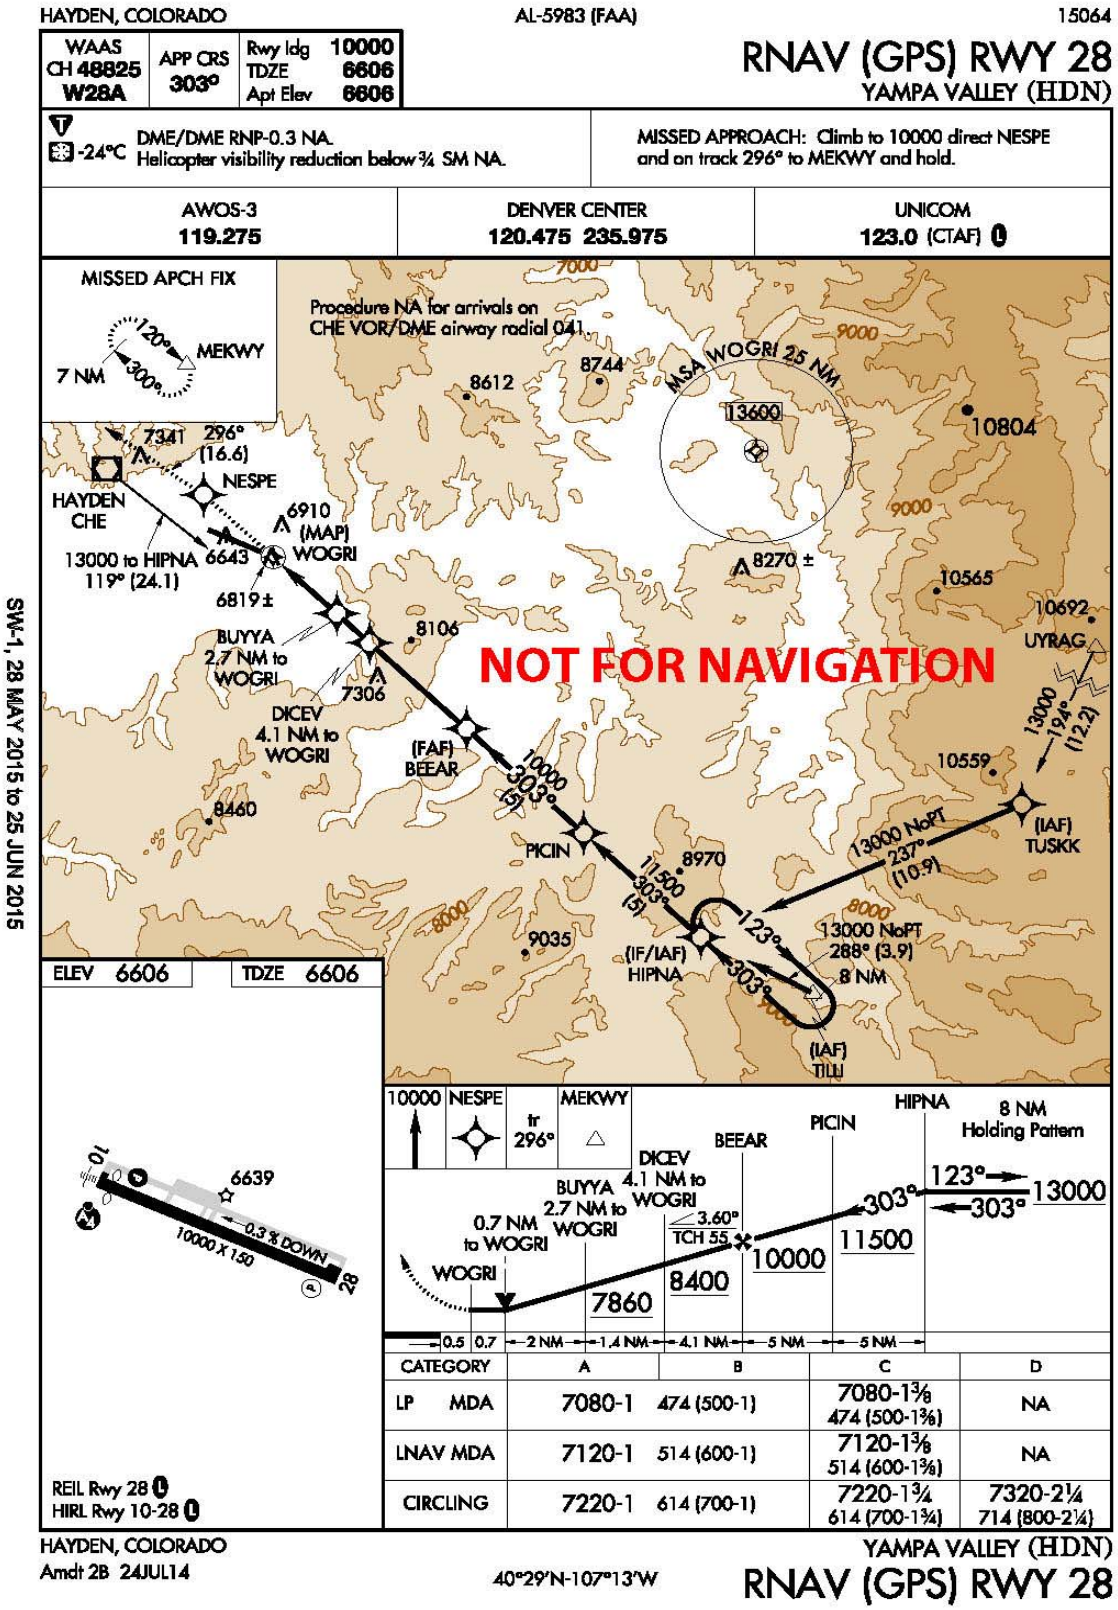

All Segments Method: All segments corrected from IAF through MA holding altitude:

Uncompensated Baro−VNAV System or Manual Method:

1 Cold Temperature Restricted Airport Temperature Limit: −24° C
2 Altitude at the Final Approach Fix (FAF) (BEEAR) = 10000 ft.
3 Airport elevation = 6606 ft.
4 Difference: 10000 – 6606 = 3394 ft.
5 Use the AIM 7−2−3 ICAO Cold Temperature Error Table for a height above airport of 3394 ft. and −24° C. Visual interpolation is approximately 500 ft. Actual interpolation is 546 Add 500 ft. to the FAF altitude and all applicable altitudes outside of the FAF up to and including IAF altitude:
   - BEEAR (FAF): 10000 + 500 = 10500 ft.
   - PICIN (Stepdown fix): 11500 + 500 = 12000 ft.
   - HIPNA (IF/IAF), TILLI (IAF) and TUSKK (IAF): 13000 + 500 = 13500 ft.
6 Correct altitudes within the final segment altitude based on the minima used, which is the LP MDA = 7080 ft.
7 Difference: 7080 – 6606 = 474 ft.
8 AIM 7−2−3 Table: 474 ft. at −24C is approximately 80ft. Use 80 ft. or round up to 100 ft.
9 Add corrections to MDA and all stepdown fix altitudes in final segment up to but not including the FAF:
   - DICEV (stepdown fix): 8400 + 80 = 8480 ft.
   - BUYYA (stepdown fix): 7860 + 80 = 7940 ft.
   - LP MDA: 7080 + 80 = 7160
10 Correct MEKWY/Missed Approach Holding Altitude: MA altitude is same as BEEAR (10000); therefore, the same table calculation in step 5 may be used at MEKWY. Take 500 ft. correction for 10000 ft. and add to MA holding altitude:
   - MEKWY: 10000 + 500 = 10500 ft.

Compensated Baro−VNAV System:

Operators using a temperature compensating RNAV system to make altitude corrections will be set to the current airport temperature (−24° C) and activated prior to the passing the IAF. A manual calculation of the cold temperature altitude correction is required for the MDA/DA. Although using the temperature compensating system should provide clearance over step−down fixes on any segment, a correction will be added to all applicable step−down fixes and monitored during descent to ensure aircraft will be "at" or "above" the corrected step−down fix altitude during the approach.

SW-1, 28 MAY 2015 to 25 JUN 2015

Arcata (KACV). Reported Temperature −5° C: RNAV (GPS) RWY 1.

NTAP Segment(s) method: Intermediate segment required

Uncompensated Baro−VNAV System or Manual Method:

1 Cold Temperature Restricted Airport Temperature Limit: −5° C
2 Altitude at the PFAF = 1900 ft.
3 Airport elevation = 222 ft.
4 Difference: 1900 ft. – 222 ft. = 1678 ft.
5 Use the AIM 7−2−3 ICAO Cold Temperature Error Table for a height above airport of 1678 ft. and −5° C. The approximate calculation is 130 ft. This may be rounded down to 100 ft. or rounded up to 200 ft. Add the correction to the FAF and all procedure altitudes outside of the FAF up to but not including IF:
    - OGMOW (PFAF): 1900 + 100 = 2000 ft.

If the airport temperature decreases below −15° C, an uncompensated baro−VNAV system may not be used to fly this approach to the LNAV/VNAV line of minima. Pilots of aircraft without a temperature compensated baro−VNAV system should select a different line of minima appropriate to capabilities of their RNAV system (e.g. LNAV line of minima). Cold temperature correction is still required on the intermediate segment.

Compensated Baro−VNAV System:

Operators using a temperature compensating RNAV system to make altitude corrections will set the current airport temperature (−5° C) and activate the system for the intermediate segment. At temperatures below −15° C, baro−VNAV temperature compensation must be on and active to use the LNAV/VNAV line of minima if baro−VNAV is used to generate the glidepath. Manual calculation of a cold temperature compensated MDA or DA, as applicable, is still required. Cold temperature correction is still required on the intermediate segment.

All Segments Method: All segments corrected from IAF through MA holding altitude:

Uncompensated Baro−VNAV System or Manual Method:

1 Cold Temperature Restricted Airport Temperature Limit: −5° C
2 Altitude at the Precise Final Approach Fix (PFAF) (OGMOW) = 1900 ft.
3 Airport elevation = 222 ft.
4 Difference: 1900 ft. – 222 ft. = 1678 ft.
5 Use the AIM 7−2−3 ICAO Cold Temperature Error Table for a height above airport of 1678 ft. And −5° C. The approximate calculation is 130 ft. This may be rounded down to 100 ft. or rounded up to 200 ft. Add the correction to the FAF and all procedure altitudes outside of the FAF up to and including IAF altitude:
    - OGMOW (PFAF): 1900 + 100 = 2000 ft.
    - SEGVE (IF/IAF) & Hold−in−Lieu of PT: 3000 + 100 = 3100 ft.
6 Correct altitudes within the final segment altitude based on the minima used, which is the LNAV/VNAV DA(H) = 847 ft.
7 Difference: 847 ft. – 222 ft. = 625 ft.
8 AIM 7−2−3 Table: 625 ft. at −5C is approximately 50 ft. Use 50 ft. or round up to 100 ft. for correction.
    - Add correction to LNAV/VNAV DA: 847 ft. + 50 ft. = 897 ft.

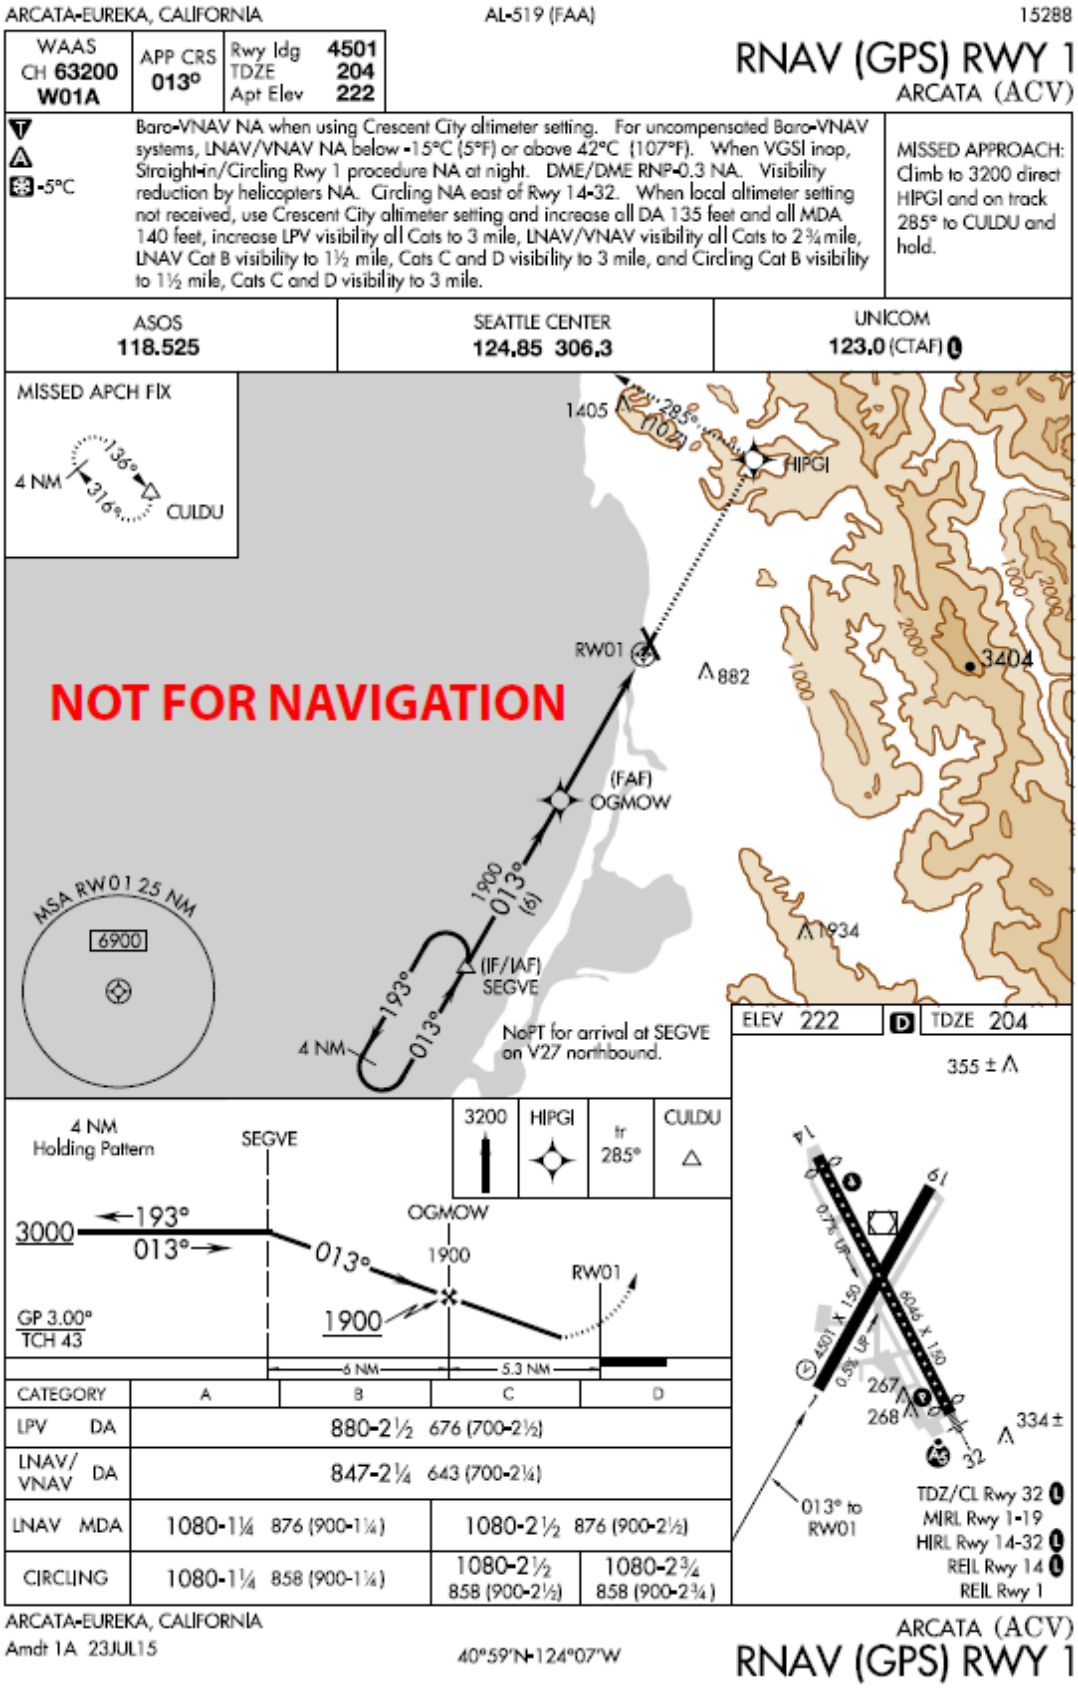

9 Correction at CULDU: Take final holding altitude and subtract field elevation: 3200 – 222 = 2978. Using table, correction is approximately 230 ft. This may be rounded down to 200 ft. or up to 300 ft.

- Missed Approach Holding Altitude/CULDU: 3200 + 200 = 3400 ft.

If the airport temperature decreases below −15° C, an uncompensated baro−VNAV system may not be used to fly this approach to the LNAV/VNAV line of minima. Pilots of aircraft without a temperature compensated baro−VNAV system should select a different line of minima appropriate to capabilities of their RNAV system (e.g. LNAV line of minima). Manual calculation of a cold temperature compensated LNAV MDA, as applicable, is still required. Cold temperature correction is still required on all segments.

Compensated Baro−VNAV System:

Operators using a temperature compensating RNAV system to make altitude corrections will be set to the current airport temperature (−5° C) and activated prior to the passing the IAF. A manual calculation of the cold temperature altitude correction is required for the MDA/DA. At temperatures below −15° C, baro−VNAV temperature compensation must be on and active to use the LNAV/VNAV line of minima if baro−VNAV is used to generate the glidepath. Manual calculation of a cold temperature compensated MDA or DA, as applicable, is still required. Cold temperature correction is still required on all segments.

ARCATA (ACV)
RNAV (GPS) RWY 1

Arcata (KACV). Reported Temperature −5° C: ILS Y or LOC/DME RWY 32.

NTAP Segment(s) method: Intermediate segment required

Uncompensated Baro−VNAV System or Manual Method:

1 Cold Temperature Restricted Airport Temperature Limit: −5° C
2 Altitude at the PFAF = 2100 ft.
3 Airport elevation = 222 ft.
4 Difference: 2100 ft. – 222 ft. = 1878 ft.
5 Use the AIM 7−2−3 ICAO Cold Temperature Error Table for a height above airport of 1878 ft. and −5° C. The approximate calculation is 150 ft. Round up to 200 ft. Add the correction to the FAF and all procedure altitudes outside of the FAF up to but not including IF:
   - ELVAA (PFAF): 2100 + 200 = 2300 ft.
   - OMBEE (stepdown fix): 2800 + 200 = 3000 ft.
   - HURDU (stepdown fix): 3400 + 200 = 3600 ft.

Compensated Baro−VNAV System:

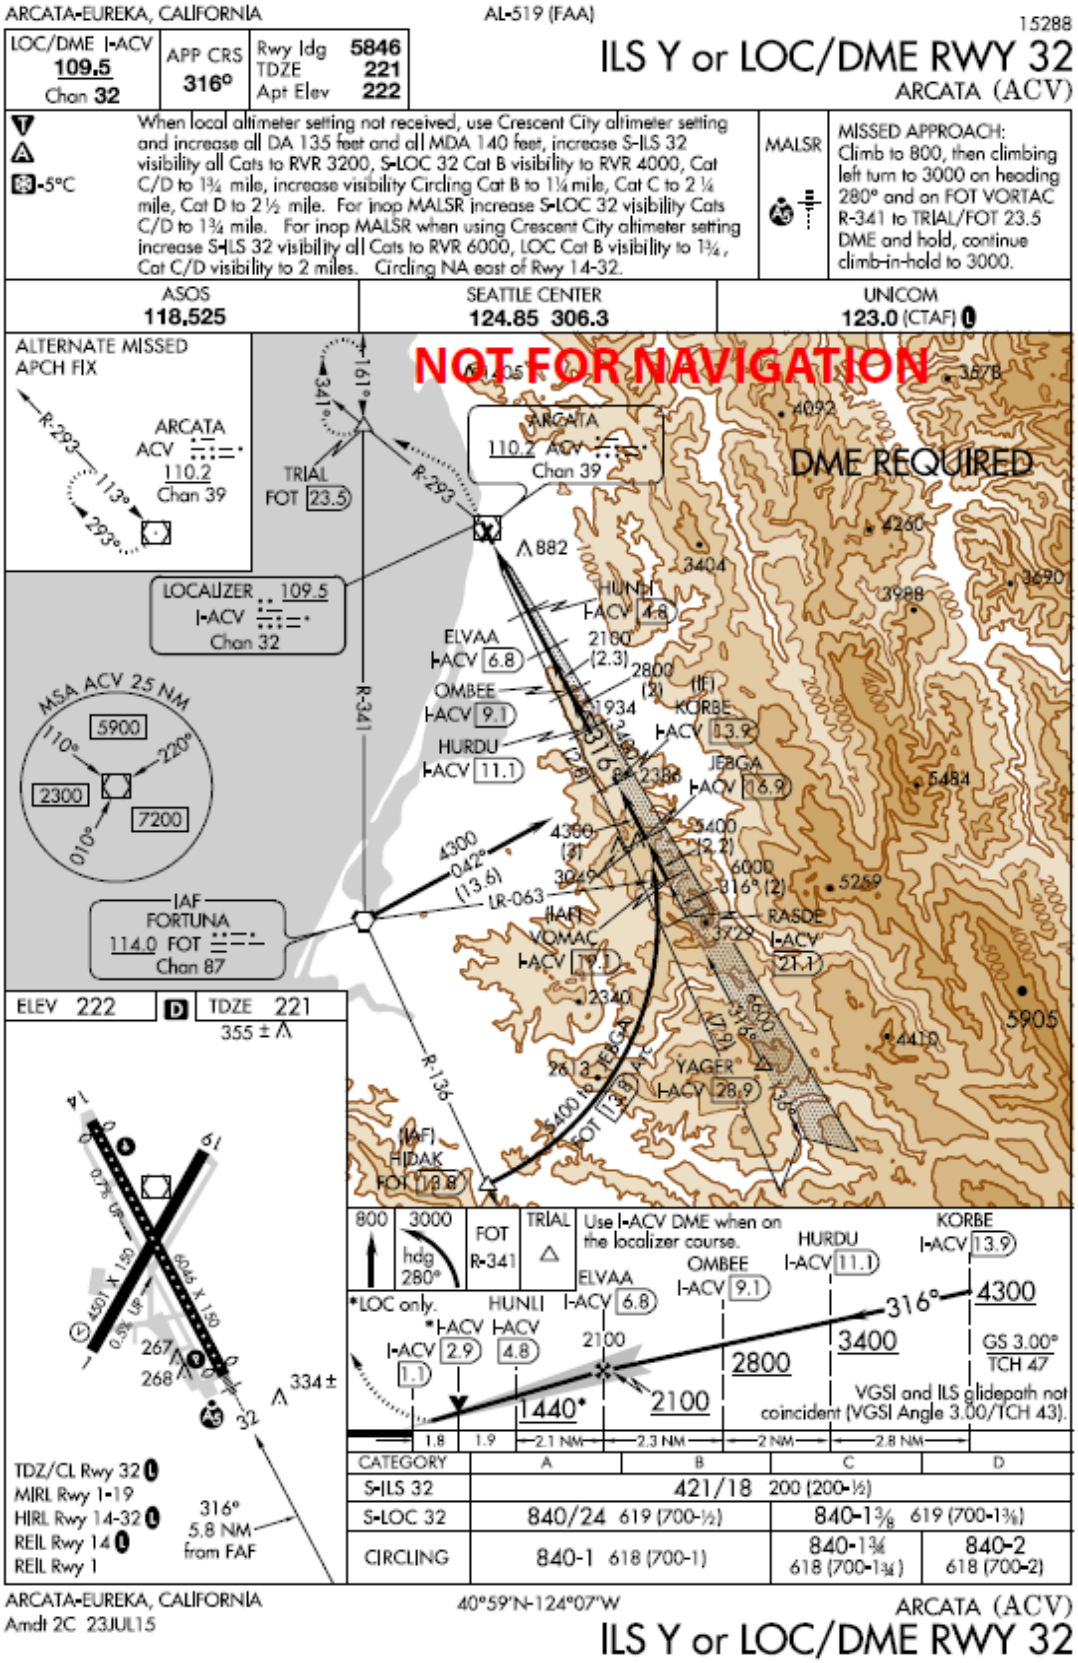

Operators using a temperature compensating RNAV system to make altitude corrections will set the current airport temperature (−5° C) and activate the system for the intermediate segment.

All Segments Method: All segments corrected from IAF through MA holding altitude:

Uncompensated Baro−VNAV System or Manual Method:

1 Cold Temperature Restricted Airport Temperature Limit: −5° C
2 Altitude correction at PFAF (ELVAA) = 200 ft.
3 Add the correction to the FAF and all procedure altitudes outside of the FAF up to and including IAF altitudes:
   - ELVAA (PFAF): 2100 + 200 = 2300 ft.
   - OMBEE (stepdown fix): 2800 + 200 = 3000 ft.
   - HURDU (stepdown fix): 3400 + 200 = 3600 ft.
   - KORBE (IF): 4300 + 200 = 4500 ft.
   - VOMAC (IAF): 6000 + 200 = 6200 ft.
   - FORTUNA (FOT) (IAF): 4300 + 200 = 4500 ft.
   - HIDAK (IAF): 5400 + 200 = 5600 ft.
4 Correct altitudes in the final segment based on the minima used. ILS DA(H): 421 ft.
5 Difference: 421 ft. – 222 ft. = 199 ft.
6 AIM 7−2−3 Table: 199 ft. at −5C is 20 ft. Use 20 ft. for correction or round up to 100 ft.
7 Add correction to DA: 421 + 20 = 441 ft.
8 Correction at final holing altitude (TRIAL): Take final holding altitude and subtract field elevation: 3000 – 222 = 2778. Using table, correction is approximately 210 ft. This may be rounded down to 200 ft. or up to 300 ft.
   - Missed Approach final holding altitude (TRIAL): 3000 + 200 = 3200 ft

Compensated Baro−VNAV System:
Operators using a temperature compensating RNAV system to make altitude corrections will be set to the current airport temperature (−5° C) and activated prior to the passing the IAF. A manual calculation of the cold temperature altitude correction is required for the MDA/DA.

(AFS–400, 8/17/2017)

REMOVAL OF TAKEOFF OBSTACLE NOTES FROM INSTRUMENT DEPARTURE CHARTS

Aug 17, 2017

Upcoming Change to Takeoff Obstacle Charting on Departure Procedures

Subject: Removal of Takeoff Obstacle Notes from U.S. Government Standard Instrument Departure (SID) Charts.

Purpose: To provide operators with information regarding a change to charting of takeoff obstacles on SID charts produced by the U.S. government

Discussion: Previous Federal Aviation Administration (FAA) policy required a description of the general location and height of takeoff obstacles on SIDs. Beginning August 17 2017, the FAA will begin the process of removing takeoff obstacle information from SID charts published within the U.S. Terminal Procedures Publication (TPP).

The goal of this change is to reduce chart clutter on the graphic depiction of the SID, while eliminating the duplication of obstacle information which is already charted elsewhere within the TPP. If a departure airport has an entry within the IFR Takeoff Minimums, Departure Procedures, and Diverse Vector Area (Radar Vectors) section of a TPP, then every SID for that airport will be annotated with a negative T symbol:  This symbol indicates the chart user should refer to the IFR Takeoff Minimums, Departure Procedures, and Diverse Vector Area (Radar Vectors) section for information that may be relevant to the departure planning process. If takeoff obstacles exist, then they will be listed within this section and highlighted by the term, “Takeoff Obstacle Notes”.

While implementation of this charting standard is set to begin in August 2017, due to the sheer volume of charts which need to be updated, the removal of takeoff obstacles from all SIDs will occur over several chart cycles, therefore chart users must be familiar with both the older charting standard (takeoff obstacles listed on each SID) and the new charting standard (takeoff obstacles removed from SID).

Recommended Action: Operators of aircraft, directors of safety, directors of operations, chief pilots, dispatch supervisors, fractional ownership program managers and training managers should ensure pilots are aware of this change to SID charting and inquire if there is any confusion regarding the relocation of this information or the publication of takeoff obstacles in the front matter of the TPP. Operators should become familiar with this change, while continuing to safely utilize this information in departure planning and daily flight operations.

For additional information, please review 17–03 TERM Charting Notice, effective August 17, 2017.

Contact: Questions or comments regarding this subject should be directed to the Flight Operations Branch, AFS–410 at 202–267–9009.

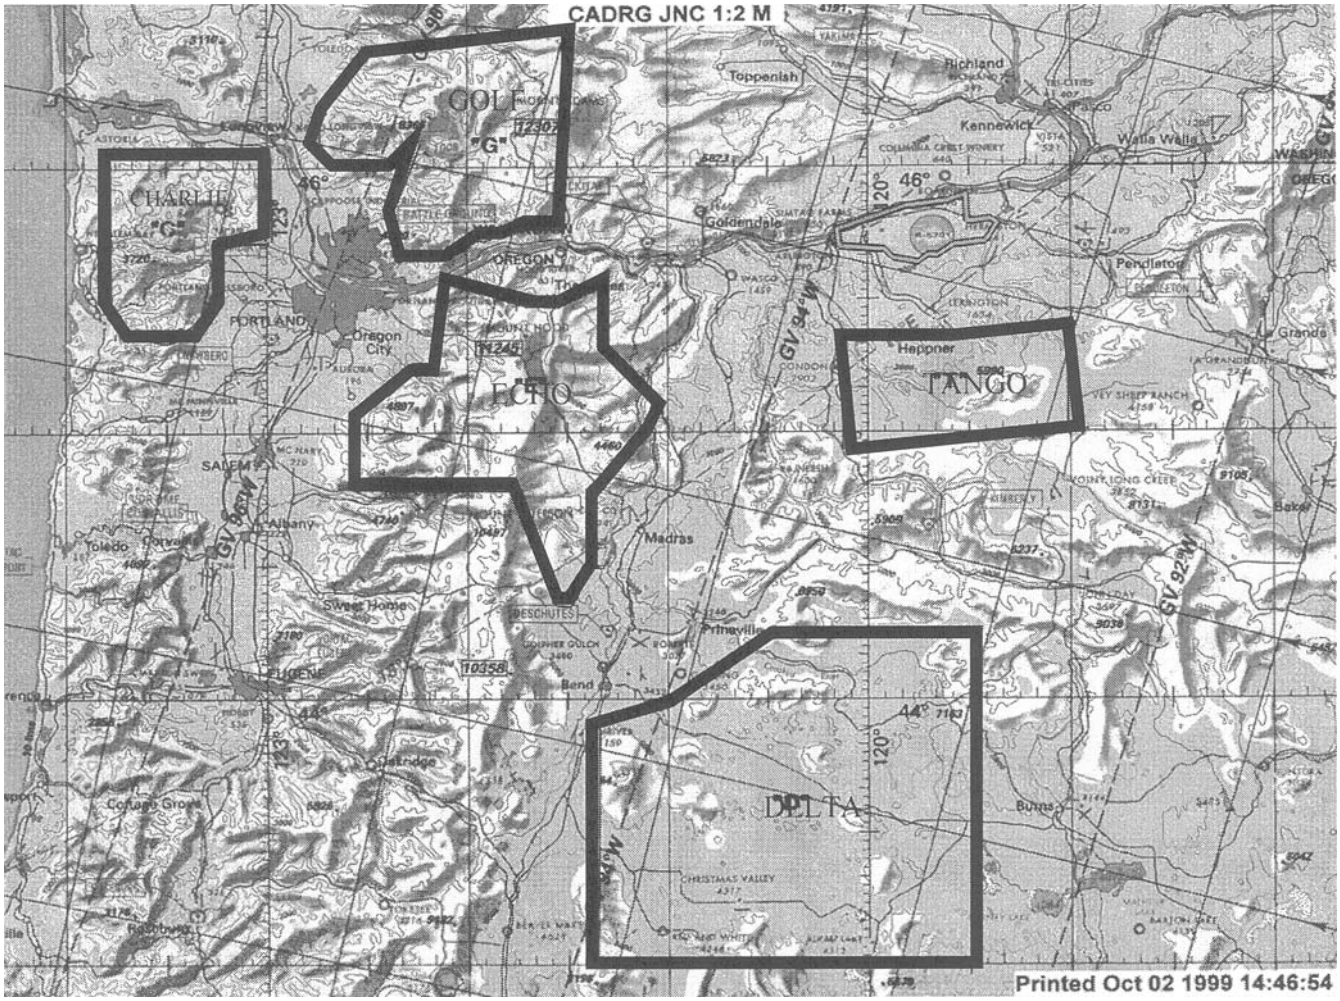

Section 2. Special Military Operations

Notice to Pilots and Interested Personnel in Northern Oregon and Southwest Washington

LIGHTS OUT MILITARY HELICOPTER OPERATIONS

Effective Date: April 30, 2000

The U.S. Air Force 304th Rescue Squadron conducts low altitude flight in five low altitude tactical navigation (LATN) Areas: “Charlie,” “Delta,” “Echo,” “Golf,” and “Tango.” These operations are conducted day and night below 200 feet above ground level (AGL). The night operations are conducted utilizing night vision goggles (NVGs). FAA exemption 5891A authorized NVG training in Air Force helicopters to be conducted without lighted position lights. These operations will ONLY be conducted below 200 feet AGL and outside of five (5) nautical miles from any public use airport, within the five (5) LATN areas.

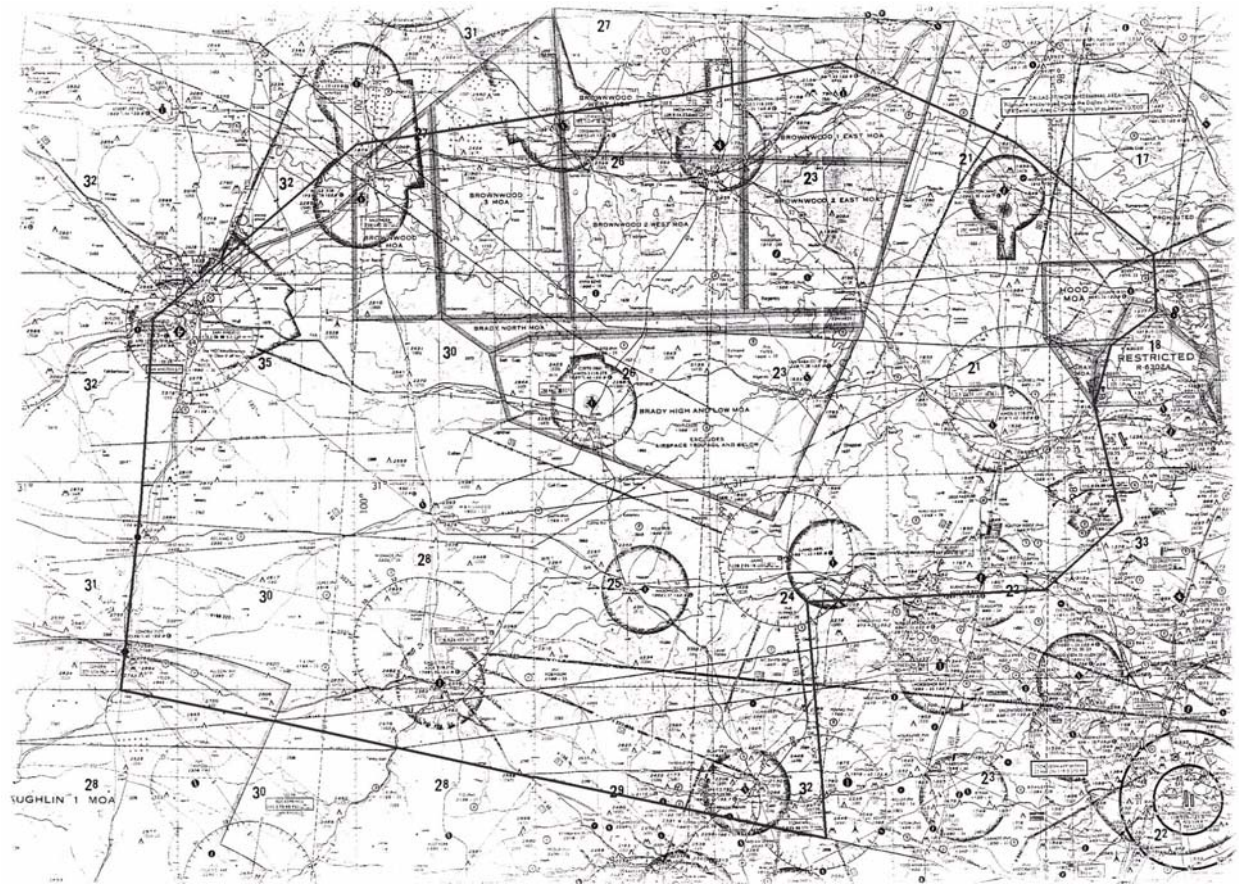

(ANM−520.6 3/2/2000)

.

Notice to Pilots and Interested Personnel in Central and Southwest Texas

LIGHTS OUT MILITARY HELICOPTER OPERATIONS

The U.S. Army/National Guard is conducting “lights out” tactical helicopter training. These operations are conducted day and night. The night operations are conducted without the use of exterior aircraft lights from the surface up to 200 feet AGL, outside four (4) nautical miles from any public−use airport, and within the boundaries depicted below:

Beginning at lat. 31°24’00” N., long. 097°44’00” W./ North Fort Hood;
to lat. 31°30’00” N., long. 097°44’00” W.; to lat. 31°48’00” N., long. 098°07’00” W.;
to lat. 31°57’00” N., long. 098°37’00” W.; to lat. 31°48’00” N., long. 099°59’00” W.;
to lat. 31°23’00” N., long. 100°35’00” W.; to lat. 30°29’00” N., long. 100°40’00” W.;
to lat. 30°16’00” N., long. 098°42’00” W.; to lat. 30°43’00” N., long. 098°41’00” W.;
to lat. 30°45’00” N., long. 098°03’00” W.; to lat. 30°52’00” N., long. 097°52’00” W.;
to lat. 31°09’00” N., long. 097°55’00” W.; to lat. 31°17’00” N., long. 097°53’00” W.;
to point of origin.

(SJT 2/21/02)

LIGHTS OUT/LOW LEVEL MILITARY HELICOPTER OPERATIONS IN SOUTHWEST WISCONSIN

The Army National Guard is conducting “Lights Out” tactical operation training IAW FAA Exemption 3946J. These operations are conducted between official sunset and official sunrise at an altitude below 500’ agl. and outside four (4) nautical miles from any public use airport.

The Routes are defined as below:

LONE ROCK (NVG Route #1)

42º 49.70’ N 89º 24.70’ W – SP

42º 45.50’ N 89º 58.00’ W – CP A

Night Vision Goggle Lights-Out Operations

Sells Low/Sells 1 MOA, Arizona

Lights-out night vision goggle training operations will be conducted within the Sells Low/Sells 1 MOAs at all altitudes from sunset to 0700Z, Monday-Friday, or as scheduled by NOTAM when the MOAs are activated for military training. Nonparticipating pilots should contact Albuquerque Center on 126.45 or 125.25 for traffic advisories and NOTAM information.

SPECIAL USE AIRSPACE
Stinger Temporary Military Operations Area, OH

Effective Dates: August 28–31, 2017, for Exercise Killer Bee I
September 4–14, 2017, for Exercise Killer Bee II
September 18–21, 2017, for Exercise Killer Bee III
September 25–28, 2017, for Exercise Killer Bee IV
October 2–11, 2017, for Exercise Killer Bee V

The Stinger Temporary Military Operations Area (MOA) is established in northwest Ohio in support of Exercises Killer Bee I, II, III, IV, and V. The exercises are designed to create a high operations tempo environment and test pilots and maintenance personnel to demonstrate increased aircraft utilization/generation rates with aircraft that do not have external fuel tanks installed, as well as enhanced maintenance capabilities while quick–turning aircraft following the return from a long–term deployment.

The Stinger Temporary MOA will be used by pilots for conducting basic fighter maneuvering (BFM) and air combat maneuvering (ACM) training activities. The exercises will be conducted from the Toledo Air National Guard Base located in Swanton, Ohio, with a maximum of 8 sorties per day during the exercises. All participating exercise aircraft will be F–16 fighters and activities will occur between 5,000 feet Mean Sea Level (MSL) to, but not including, Flight Level 180 (FL 180).

The Stinger Temporary MOA will only be activated for aircraft participating in Exercises Killer Bee I, II, III, IV, and V, respectively. Aerial activities will include aggressive three–dimensional tactical combat maneuvering involving abrupt, unpredictable changes in altitude, attitude, and direction of flight by participating aircraft. Supersonic flight is not authorized and flares will not be employed in the Stinger Temporary MOA; however, chaff will be employed.

Nonparticipant pilots are encouraged to contact the nearest flight service station and request the latest NOTAM information or contact Cleveland Air Route Traffic Control Center (ARTCC) for status of the temporary MOA.

Stinger Temporary MOA, OH

PHILADELPHIA INTERNATIONAL AIRPORT

Special Authorization to Conduct Simultaneous Approaches to Runway 26 with Departures from Runway 27R

Philadelphia International Air Traffic Control Tower has been granted a waiver that authorizes air traffic personnel to conduct simultaneous ILS approaches to Runway 26 while aircraft simultaneously depart Runway 27R.

(PHL ATCT 3/25/2010)

BALTIMORE−WASHINGTON INTERNATIONAL AIRPORT (BWI)

STANDARD TAXI ROUTES

Baltimore, Maryland

Baltimore Tower has instituted Standard Taxi Routes to Runway 28 for departure aircraft located at Pier A, B, C, and the southern portion of Pier D. Ground Control will issue the Standard Taxi Route. Pilots who are unable to comply with standardized routes should advise Ground Control on initial contact. **Read back all hold short instructions.** Aircraft operators are required to have a letter of agreement with Baltimore Tower to use the Standard Taxi Routes.

RUNWAY 28		
Start Point	**Route ID**	**Route**
Pier A, Pier B Pier C Gates 2, 4, 6, 8, 12 & 16	Perrys 1	Taxiways T, U, U1
Pier C Gates 1, 3, 5, 7, 9, 11, 13 & 15 Pier D Gates 2, 4, 7, 8, 10, 11, 12, 13, 14, 15 & 16	Perrys 2	Taxiways T, C U U1

BOSTON-LOGAN INTERNATIONAL AIRPORT (KBOS)

Boston, Massachusetts

Land and Hold Short Operations (LAHSO)

Boston-Logan Airport (BOS) has received authorization to allow a Land and Hold Short Operation (LAHSO) to take place between an arriving and departing aircraft on certain runway pairs. This Arrival - Departure LAHSO is authorized at the following locations:

Arrivals on Rwy 15R (short of Rwy 9/27) - for aircraft departing on Rwy 9.

Arrivals on Rwy 27 (short of Rwy 22L/4R) - for aircraft departing on Rwy 22L.

A Rejected Landing Procedure (RLP) is required for the two LAHSO operations described above. A RLP is defined as: *"A published, predetermined heading to be used in the event of a rejected landing. Unless alternate instructions are given by ATC, pilots are expected to execute the procedure as published and remain clear of clouds*."

The associated Rejected Landing Procedure (RLP) for each of the Arrival - Departure LAHSO configurations noted above is as follows:

Arrival - Departure LAHSO Configuration	Rejected Landing Procedure (RLP)
LAHSO on RWY 15R - Short of RWY 9 (when aircraft are departing Rwy 9)	TURN RIGHT HEADING 180
LAHSO on RWY 27 - Short of RWY 22L (when aircraft are departing Rwy 22L)	TURN RIGHT HEADING 300

It is important to note that at Boston-Logan Airport (KBOS), the RLP is only applicable if the intersecting runway is being utilized by a departing aircraft.

Arrival - Arrival LAHSO also takes place on Runway 15R (short of Rwy 9/27) to accommodate aircraft arriving on Runway 9, and, on Runway 27 (short of Rwy 22L/4R) to accommodate aircraft arriving on Runway 22L.

The Rejected Landing Procedures (RLP) noted above are not applicable when the intersecting runway is being utilized by an arriving aircraft.

PHILADELPHIA INTERNATIONAL AIRPORT

RUNWAY 35 ARRIVALS PROCEDURES "TALL SHIP" IN RIVER CHANNEL

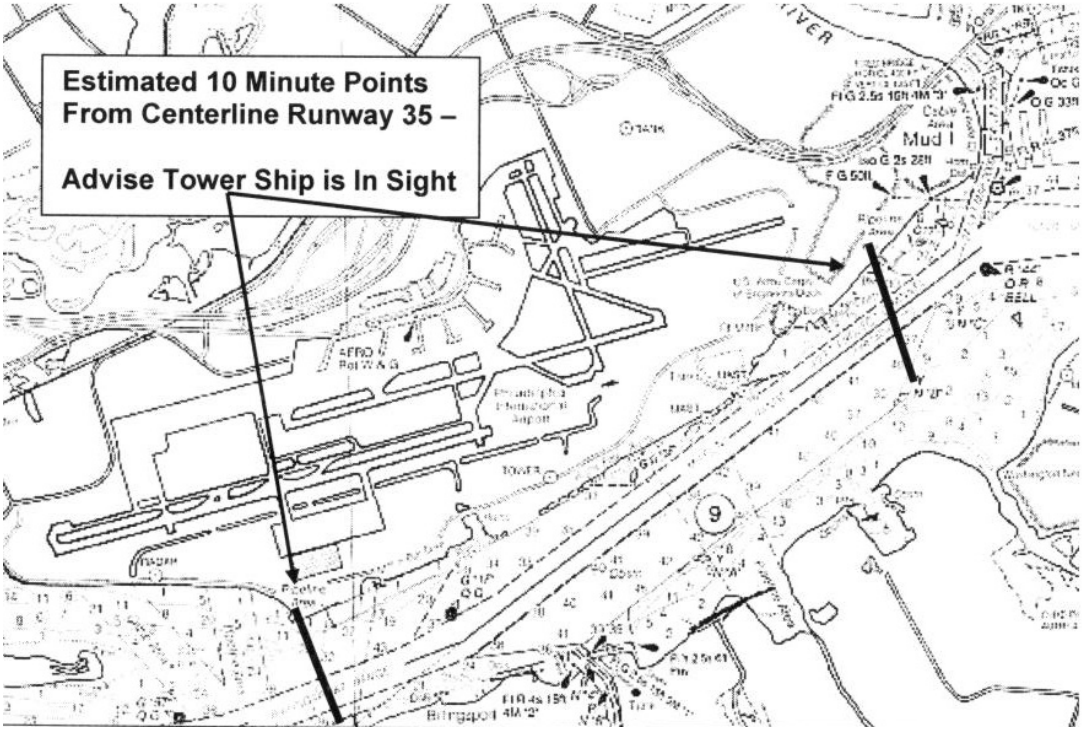

Ships with an air-draft (height above the water) of 125' or greater could be a penetration of the 20:1 Threshold Siting Surface, as referenced in the Federal Aviation Administration's (FAA) Advisory Circular AC 150/5300-13, *Airport Design*.

In 2004 procedures were put in place requiring the PHL TRACON to cease arrival operations to Runway 35 upon a 10 minute notification from the Department of Aviation "River Watch" when a "Tall Ship" is approaching the airport. Arrivals to Runway 35 may resume only upon notification from "River Watch" that the "Tall Ship" has cleared the Runway 35 Arrival Path.

When the time estimates are off even slightly, arrival aircraft that are lined up for Runway 35 must be re-routed into existing traffic flows to other runways.. At peak arrival periods there may be no available capacity on any other runway.

To reduce the impact on aircraft operations due to last minute re-sequencing to other runways and en-route holding of aircraft, on August 1, 2011 PHL ATCT will institute the following changes to Runway 35 "Tall Ship" arrival procedures:

From Sunrise to Sunset: From 10 minutes before a "Tall Ship" enters the Runway 35 Arrival Path, until the "Tall Ship" clears the Runway 35 Arrival Path; the PHL TRACON will clear aircraft for a Visual Approach Runway 35. The Approach Controller will advise the aircrew of the presence of a "Tall Ship" in the channel, and instruct the aircrew to report the ship "in sight" to the Tower Controller, then transfer the aircraft to the Tower. Once the aircrew reports that the "Tall Ship" is "in sight", the Tower Controller will issue landing clearance. The Tower Controller would assist the pilot in acquiring the ship traffic by advising of direction of travel, or position if the vessel is pushing off the piers. Aircraft are not expected to directly over-fly a "Tall Ship".

These procedures would be utilized from sunrise to sunset, during Visual Metrological Conditions (VMC), utilizing Visual Approaches only. To conduct visual approaches, Air Traffic rules require cloud ceilings to be at least 500’ above the Minimum Vectoring Altitude (MVA). The MVA south of the airport is 1600’. This effectively restricts Air Traffic from conducting visual approaches to Runway 35 to periods with weather conditions greater than 2100’ ceilings, and assuming a standard rate of descent of 310’ per nautical mile, between 5-6 miles visibility. This procedure would give a pilot more than ample time to visually acquire both the airport and a “Tall Ship”.

PROTOTYPE RUNWAY STATUS LIGHTS

BOSTON LOGAN INTERNATIONAL AIRPORT
BOSTON, MA

The Federal Aviation Administration (FAA) operates a prototype Runway Status Lights (RWSL) system at Boston Logan International Airport (BOS).

Runway Status Lights indicate when a runway is unsafe to enter, cross, or take−off through the use of in−pavement red lights installed at selected intersections and runways as described below.

LIGHTING

RWSL convey the runway occupancy status, indicating when a runway is unsafe to enter through the use of red in−pavement warning Runway Entrance Lights (REL) and when it is unsafe to take off through the use of red in−pavement warning Takeoff Hold Lights (THL).

REL are a series, typically 6, 7, or up to 20 or more, of red in−pavement lights spaced evenly along the **taxiway centerline** from the taxiway hold line to the runway edge. One REL is placed just before the hold line, and one REL is placed near the runway centerline.

REL are directed toward the **runway hold line** and are oriented to be visible only to pilots and vehicle operators entering or crossing the runway from that location.

REL are operational at the following intersections at BOS:

Runway 4L/22R	Taxiways K and E (East and West Side)
Runway 4R/22L	Taxiway E (East Side)
Runway 9/27	Taxiway C (Northwest Side)
Runway 15R/33L	Taxiway D (Southwest Side)

THL are a series of red in−pavement lights at 100 foot spacing along the **runway centerline**.

THL are directed toward the **approach end of the runway** and are visible to pilots in position for takeoff or just commencing departure roll.

There are two sets of THL on the following runways at BOS:

Runway 9	16 pairs (total of 32 lights)
Runway 15R	16 pairs (total of 32 lights)

When operating at airports with RWSL, pilots will operate with transponder “ON” when departing the gate or parking area until arrival at the gate or parking area. This ensures interaction with the FAA surveillance systems which provide information to the RWSL system.

Runway Status Lights indicate runway status only. They do not substitute for an ATC clearance. Pilots are still required to receive an ATC clearance for any operation on the runway.

Pilots are encouraged to learn more about the RWSL system at:

http://www.faa.gov/air_traffic/technology/rwsl/

Southeast

ATLANTA TRACON

PREFERRED ARRIVAL ROUTES - AIRCRAFT ARRIVING ATLANTA NORTH SATELLITE AIRPORTS FROM THE SOUTH

Effective July 29, 2010, two new STARs will be published for IFR aircraft arriving Atlanta North Satellite airports from the south. The STARs are the DIFFI and the JRAMS RNAV.

To the maximum extent possible, aircraft arriving the following airports should file either the DIFFI* or JRAMS RNAV STAR*:

Airport	STAR(s)
Canton, Cherokee County Airport (47A)	DIFFI/JRAMS
Cartersville Airport (VPC)	DIFFI/JRAMS
Cobb County, McCollum Field (RYY)	DIFFI/JRAMS
Dallas, Paulding County Regional Airport (PUJ)	DIFFI/JRAMS
DeKalb-Peachtree Airport (PDK)	DIFFI/JRAMS
Dobbins Air Reserve Base (MGE)	DIFFI/JRAMS
Fulton County Airport - Brown Field (FTY)	DIFFI/JRAMS
Gainesville, Lee Gilmer Memorial Airport (GVL)	DIFFI
Lawrenceville, Gwinnett County - Briscoe Field (LZU)	DIFFI/JRAMS
Monroe-Walton County Airport (D73)	JRAMS

*File the STAR that is most closely aligned with your route of flight.

Questions about these procedures should be referred to:

Operations Support Specialist
Atlanta TRACON (A80)
Phone: 678-364-6169
E–mail: james.allerdice@faa.gov

ATLANTA TRACON

THE USE OF VISUAL SEPARATION FOR AIRCRAFT TRANSITIONING BETWEEN ATLANTA ATCT and ATLANTA APPROACH / DEPARTURE CONTROL

FAA JOINT ORDER 7110.65 authorizes the application and use of Visual Separation between aircraft under the control of the same facility. Historically in Terminal Facilities, Air Traffic Controllers worked in an Up/Down environment. They would rotate through the RADAR room and the Tower. In recent years, the Federal Aviation Administration has separated these functions at select locations and created a separate RADAR facility, know as a TRACON (Terminal RADAR Approach Control). This is the case in Atlanta, Georgia. Atlanta ATCT (ATL) and Atlanta TRACON (A80) are two separate and distinct air traffic facilities, each with their own employees.

In keeping with the spirit and intent of the regulations and rules governing the National Airspace System, the use and application of Visual Separation for aircraft transitioning between the two facilities will continue as if the two facilities remained one.

There will be no change in the use or application of Visual Separation in the Atlanta Terminal area, therefore the users of the National Airspace System should see no difference and this will have no effect on the flying community.

Questions about this procedure should be referred to:

Mark J. Dillon
Operations Support Specialist
Atlanta TRACON (A80)
Ph: 678-364-6175

ATLANTA TRACON / ATLANTA ARTCC / AUGUSTA APPROACH CONTROL REALIGNMENT OF AIRSPACE

EFFECTIVE: August 25, 2011

In order to provide weather advisory services in the eastern part of the state of Georgia, a realignment of airspace between Atlanta ARTCC, Atlanta TRACON and Augusta Approach Control is being implemented.

The ATHENS sector of Atlanta TRACON will operate from **0615 Local to 2200 Local**. Air Traffic Control Services will be provided to the following airports on frequency 132.475 / 291.1. Clearances may be obtained via published frequencies or via telephone number: 678-364-6131.

Services during all other times will be provided by Atlanta ARTCC on 127.5 / 316.05 (2200L – 0615L)

Athens / Ben Epps Airport (AHN)

Gainesville / Lee Gilmer Memorial (GVL)

Greensboro / Green County Regional (3J7)

Jefferson / Jackson County (19A)

Madison Municipal (52A)

Winder / Barrow County (WDR)

Augusta Approach Control will operate from 0645 Local to 2300 Local. Air Traffic Control Services will be provided to the following airports on frequency 126.8 / 270.3, other times by Atlanta ARTCC on **128.1 / 323.0**

Washington / Wilkes County (IIY)

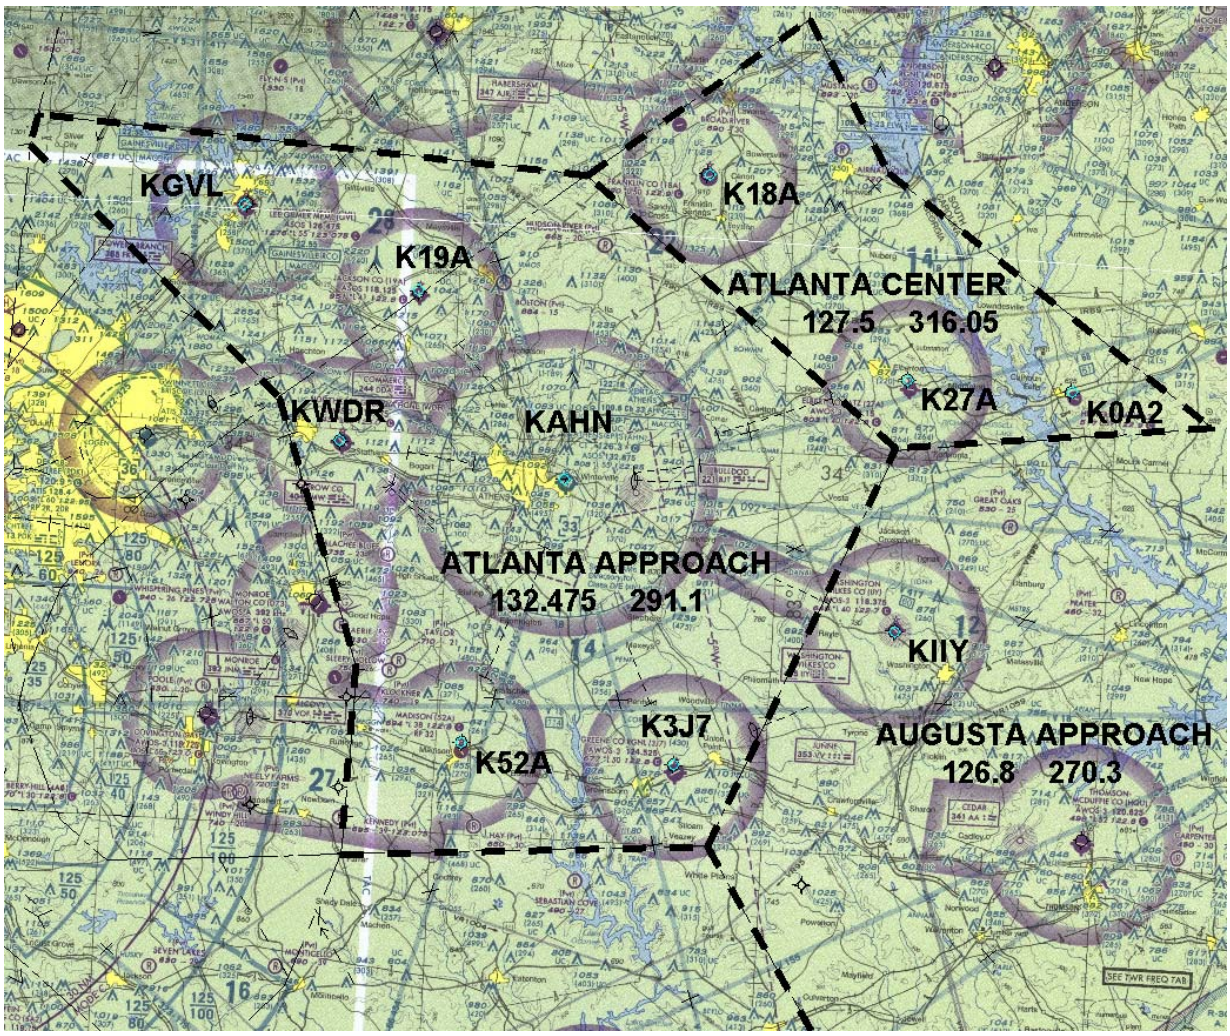

Atlanta ARTCC will provide Air Traffic Control Service to the following airports on frequency 127.5:

Calhoun Falls / Hester Memorial (0A2)

Canon / Franklin County (18A)

Elberton / Elbert County PATZ Field (27A)

A diagram depicting the geographical boundaries follows.

Questions about this realignment should be referred to:

Mark J. Dillon

Operations Support Specialist

Atlanta TRACON (A80)

Ph: 678-364-6175

Email: mark.dillon@faa.gov

ATLANTA HARTSFIELD-JACKSON INTERNATIONAL AIRPORT (ATL)
REDUCED DIVERGENCE AREA NAVIGATION (RNAV) STANDARD INSTRUMENT DEPARTURES (SIDs)

EFFECTIVE: October 20, 2011

Beginning Thursday, October 20, 2011, ATL will implement new Reduced Divergence RNAV SIDs. These SIDs have been designed to aid in noise abatement and add departure capacity to the ATL airport while maintaining an equivalent level of safety when compared to existing separation standards. To achieve this, ATL will implement the Equivalent Lateral Spacing Operations (ELSO) standard developed by MITRE Corporation and approved for implementation by FAA Waiver 11-T-05.

1. Reduced Divergence RNAV SIDs will be conducted daily between 0700-2300 Local Time. Between 2300-0700 Local Time, aircraft will be issued noise abatement radar vectors.

2. Pilots must ensure that they are operating on the **current RNAV database** (dated 10/20/2011 or later) and that the **correct departure runway** is entered into the Flight Management Computer (FMC) prior to departure.

NOTE- Several fixes/waypoints on the new SIDs are new or have moved from their previous location.

3. ATL controllers will issue departure clearances to RNAV aircraft using the "RNAV to" phraseology. Example – "DAL123, RNAV to SNUFY, Runway 26L, Cleared for Takeoff." In this case, SNUFY would be the first named fix/waypoint on the SID to be flown. The pilot is expected to verify that the fix/waypoint displayed on the Flight Management System (FMS) corresponds to the fix/waypoint issued in the departure clearance. **If the fix/waypoint is not identical, pilots must request a vector from the Tower.**

4. Advise ATC immediately of any RNAV anomaly and request vectors as necessary.

5. Extra vigilance is required in order to ensure the highest level of safety. The ATL Reduced Divergence RNAV SIDs commonly use divergence less than 15-degrees as depicted in Figure #1 and #2 below. Departure tracks may be separated by as little as 10-degrees.

Figure #1

Normal Departure Operations Utilizing the ELSO Standard

(Dual Departures)

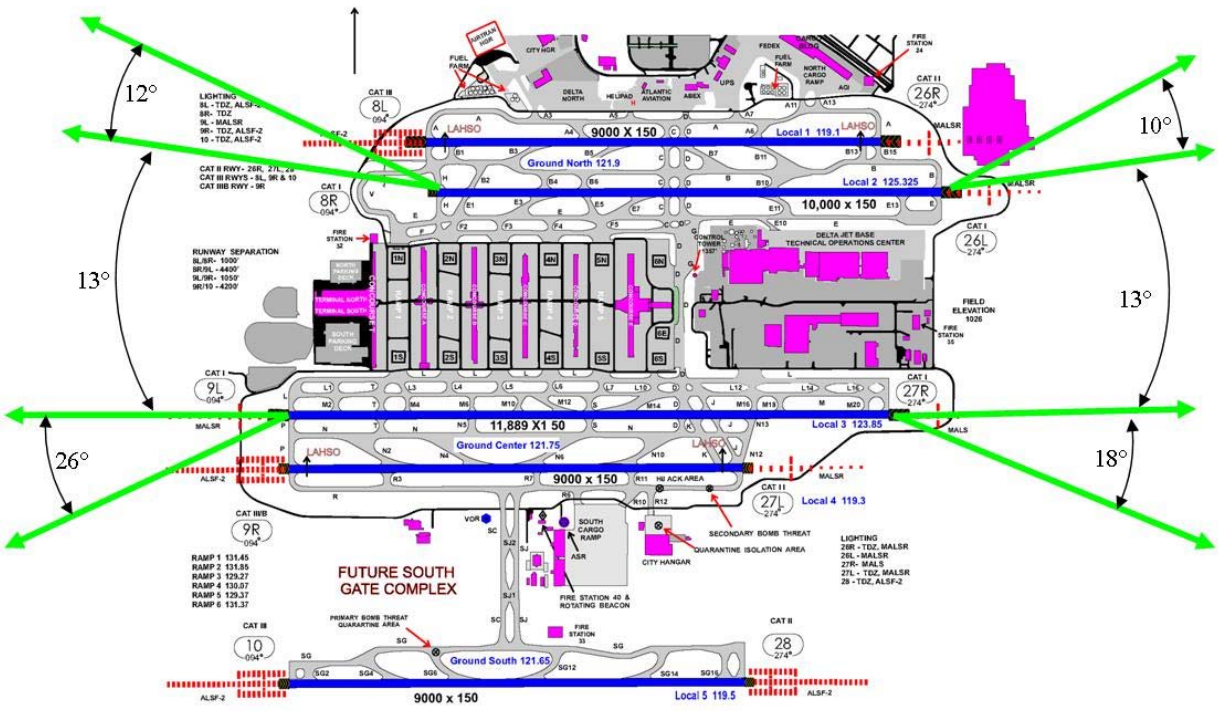

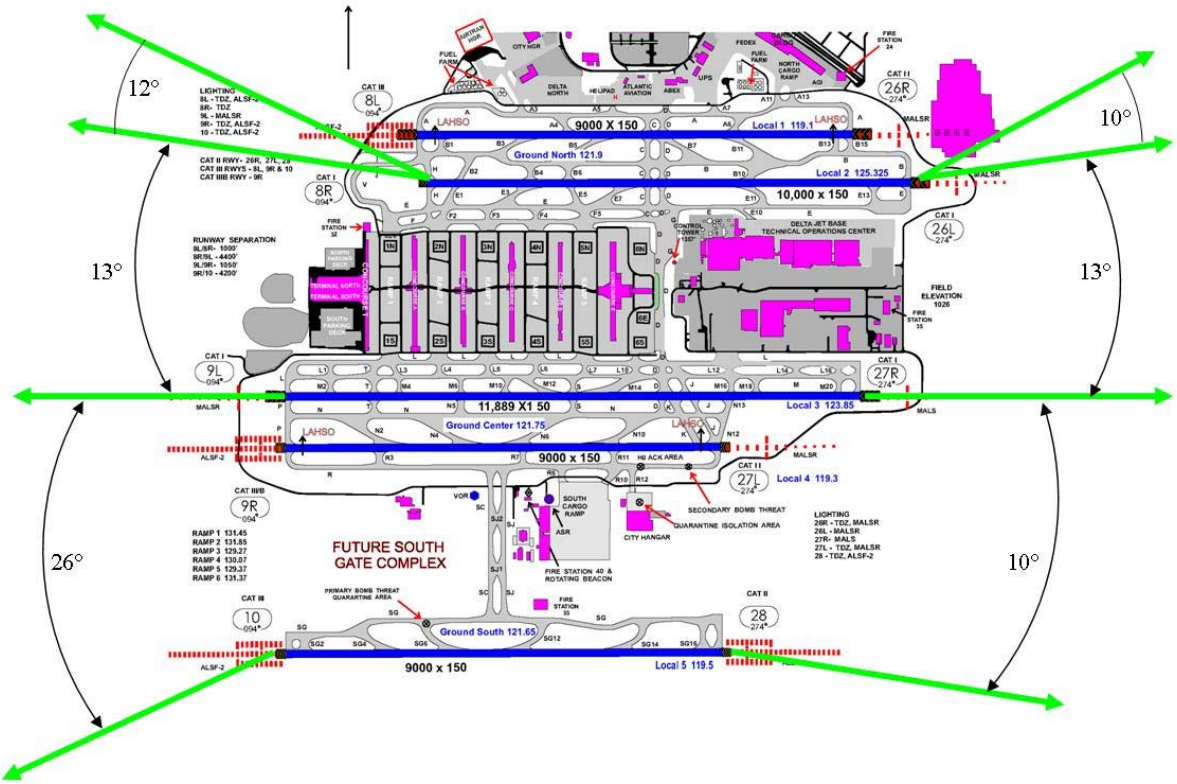

Figure #2

Normal Departure Operations Utilizing the ELSO Standard

(Triple Departures)

CLEVELAND-HOPKINS INTERNATIONAL AIRPORT (CLE)

STANDARD (CODED) TAXI ROUTES

Effective: Until Further Notice

The Cleveland−Hopkins International Airport (CLE) has instituted standardized taxi routes to all runways for departure aircraft.

These standardized taxi routes will use color-coded designations for routings to various runways. The color-coded routes may be issued by the CLE ground controller instead of the normal traditional full taxiway routings. The routes and associated codes are published in text form below. Pilots who are unable to comply with standardized routes should advise ground control on initial contact.

READBACK ALL HOLD SHORT INSTRUCTIONS

Runway 6L		
Route ID	**Start Point**	**Routing Via**
Violet	All Terminal Parking Areas	Juliet, Kilo, Lima, November **HOLD SHORT OF RUNWAY 6R** and monitor 120.9, Golf. *(Monitor 124.5 when west of Runway 6R)*

Runway 6R		
Route ID	**Start Point**	**Routing Via**
Emerald	All Terminal Parking Areas	Juliet, Kilo and Lima.

Runway 6R, Intersection Tango		
Route ID	**Start Point**	**Routing Via**
Red	All Terminal Parking Areas	Juliet, Kilo, Lima and Tango

Runway 24L		
Route ID	**Start Point**	**Routing Via**
Blue	All Terminal Parking Areas	Juliet, Sierra, Lima, Whiskey

Runway 24R		
Route ID	**Start Point**	**Routing Via**
Grey	All Terminal Parking Areas	Juliet, Sierra, **HOLD SHORT OF RUWNAY 24L** and monitor 120.9, Sierra. *(Monitor 124.5 when west of Runway 24L)*

Runway 24R		
Route ID	**Start Point**	**Routing Via**
Orange	All Terminal Parking Areas	Juliet, Romeo **HOLD SHORT OF RUNWAY 24L** and monitor 120.9, Bravo, Golf, Sierra. *(Monitor 124.5 when west of Runway 24L)*

Blue 17	**South terminal.** Taxiway Kilo between Taxiways Romeo and Uniform CONTACT GROUND ON 132.72.	Kilo, RY 9L, Golf, Victor, Mike and M-6. Hold short of Uniform and contact ground 121.8. Hold short of Foxtrot and contact ground on 119.45 joining RY 9L.
Blue 14	**North terminal** circle 1 CONTACT GROUND ON 119.45	Foxtrot, Victor, Mike, and M-6.
Blue 15	**North terminal** circles 2 through 6 CONTACT GROUND ON 121.8	Kilo, Victor, Mike and M-6. Hold short of Foxtrot and contact ground on 119.45.

RUNWAY 3L

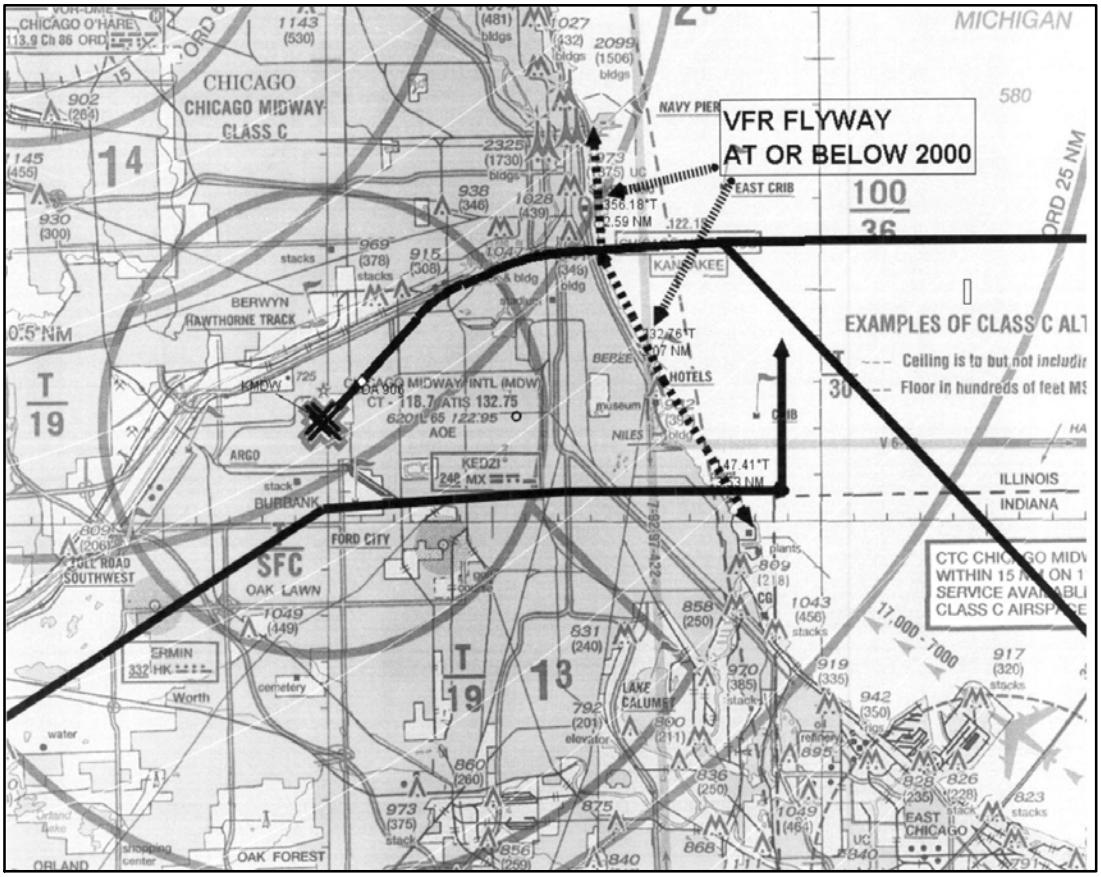

Route ID	Starting Point	Routing Via
Brown 8	**South terminal** Taxiway Kilo between Taxiways Romeo and Uniform. CONTACT GROUND ON 132.72.	Kilo, RY 9L, Foxtrot and Mike. Hold short of Uniform and contact ground 121.8. Hold short of Foxtrot and contact ground on 119.45 joining RY 9L.
Brown 2	**South terminal** circle 2S. CONTACT GROUND ON 119.25.	Juliet, Papa Papa. Hold short of PP-1 and **MONITOR** tower on 118.4
Brown 4	**North terminal** circles 2 through 6 CONTACT GROUND ON 121.8	Kilo, Victor, Foxtrot, Mike. Hold short of Foxtrot and contact ground on 119.45.
Brown 6	**North terminal** circle 1 CONTACT GROUND ON 119.45	Foxtrot, Mike.
Brown 7	**South terminal** circle 2S. CONTACT GROUND ON 119.25.	Juliet, Papa Papa, PP1.

MIDWAY AIRPORT (MDW) NEW RNAV APPROACHES TO RUNWAY 22L

Effective February 6, 2014

Chicago TRACON will begin a new arrival flow for Midway (MDW) airport on February 6, 2014. During times that MDW airport is operating on this configuration, MDW arrivals will cross the Lake Michigan shoreline (from Navy Pier to Gary/Chicago Int'l airport) between 3,000 feet and 2,400 feet inbound to runway 22L. When transitioning the Chicago Metropolitan area along the Lake Michigan shoreline, VFR aircrafts are advised that lower altitudes are strongly suggested whenever MDW is on a runway 22L configuration.

Chicago TRACON

**Red tracks indicate the estimated flight paths into Runway 22L*

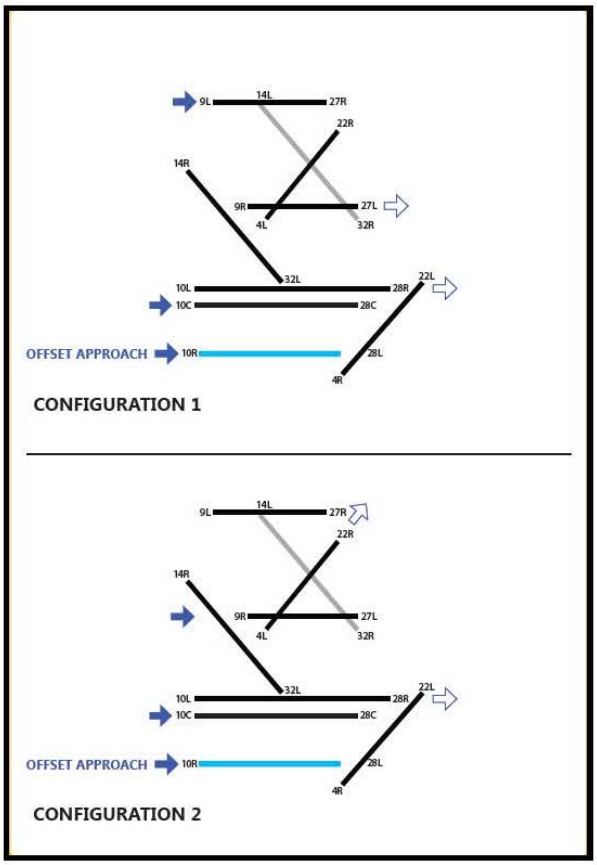

Should you have any questions, please feel free to contact the Chicago TRACON Plans and Procedures office at:

(847)608−5591

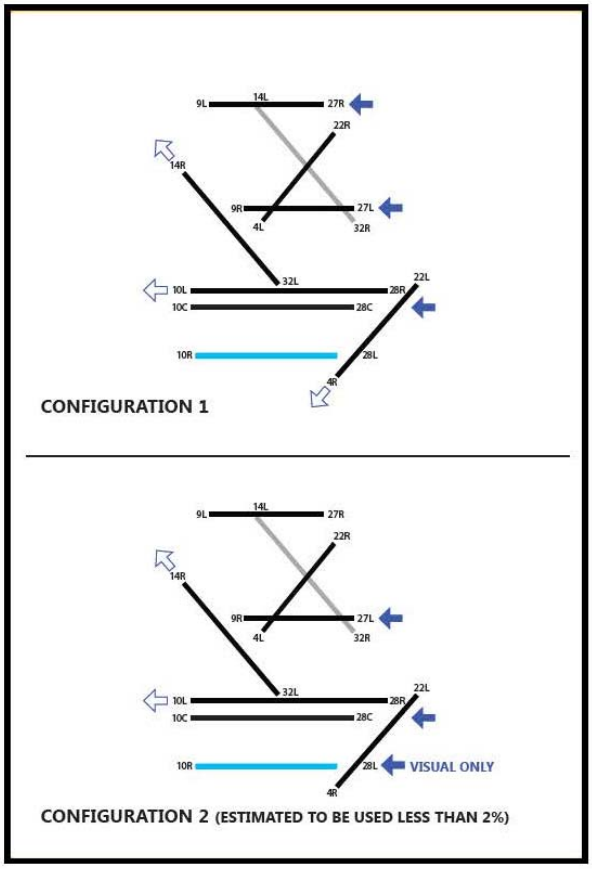

O'HARE INTERNATIONAL AIRPORT
RUNWAY 10R/28L
OPENS OCTOBER 15, 2015

New Runway 10R/28L opens on October 15, 2015. Arrivals and departures at O'Hare will remain in primarily east/west flow.

EAST FLOW CONDITIONS

WEST FLOW CONDITIONS

South Central United States

NON-MOVEMENT AREA AT BATON ROUGE METROPOLITAN (BTR) AIRPORT, BATON ROUGE, LOUISIANA

NATIONAL AIRSPACE CHANGE: A decision to establish a non-movement area is being implemented in accordance with Federal Aviation Administration Order JO 7210.3, Facility Operation and Administration, on Taxiway E (Echo) at BTR Airport. The decision to implement this non-movement area is due to the construction of a new hangar that blocks visibility from the Airport Traffic Control Tower (ATCT).

BACKGROUND: BTR ATCT has Line of Sight obstructions to Taxiway E. The non-visible area of Taxiway E is approximately 1,150 feet and extends from the southwest side of the River City Hangar Aviation Ramp to 200 feet southwest of the Runway 22L hold short line. A 650 foot portion of the non-visible area was pre-existing; however, an additional 500 feet was created when the River City Hangar was constructed in March 2006.

IMPACT: Due to obstructed vision, the BTR Tower is unable to provide air traffic control service in the non-movement area on Taxiway Echo from the southwest side of the River City Hangar Ramp to 200 feet southwest of the Runway 22L hold short line.

****MOVEMENT IN THIS AREA IS AT PILOTS OWN RISK.****

(Central Service Area, 9/2/09)

HOUSTON INTERCONTINENTAL ATC TOWER AND HOUSTON TRACON VISUAL SEPARATION PROCEDURES AT GEORGE BUSH INTERCONTINENTAL AIRPORT (IAH)

BACKGROUND: The purpose of this NOTAM is to inform pilots operating to/from IAH Airport of visual separation procedures between the Houston Intercontinental ATC Tower and Houston TRACON.

Houston Intercontinental ATC Tower and Houston TRACON are authorized to apply visual separation between aircraft under the control of either facility in order to maintain efficiency at IAH Airport.

Both facilities must ensure that visual separation is applied only when weather conditions do not obscure visibility affecting the application of visual separation.

If you have any questions or concerns, please contact the manager or designee of one of the facilities listed below during normal business hours:

Houston TRACON	281-230-8400
Houston Intercontinental ATC Tower	281-209-8600

NOTICES TO AIRMEN (NOTAM) FOR THE PROTOTYPE RUNWAY STATUS LIGHTS (RWSL) AT DALLAS FT WORTH INTERNATIONAL AIRPORT (DFW), DFW, TX

The Federal Aviation Administration (FAA) operates prototype Runway Status Lights (RWSL) system at DFW.

Runway Status Lights, indicate when a runway is unsafe to enter, cross, or take−off through the use of in−pavement red lights installed only at selected intersections and runways as described below.

LIGHTING

RWSL conveys the **runway occupancy status**, indicating when a runway is unsafe to enter through the use of red in−pavement warning Runway Entrance Lights (RELs) and when it is unsafe to take off through the use of red in−pavement warning Takeoff Hold Lights (THLs).

The RELs are a series of red lights, typically 6, 7 or up to 20+ in−pavement lights spaced evenly along the taxiway centerline from the taxiway hold line to the runway edge. One REL is placed just before the hold line and one REL is placed near the runway centerline. All RELs are directed toward the **runway hold line** and are oriented to be visible only to pilots and vehicle operators entering or crossing the runway from that location.

RELs are operational at the following intersections at DFW:

- **Runway 18L/36R**
- **Runway 17R/35L**
  - **Taxiways EK, K8, EL, EM (East Side)**
  - **Taxiways Y, Z, EJ, B, A (East and West Side)**
- **Runway 17C/35C**
  - **Taxiways EJ, EL, ER (East Side)**
  - **Taxiways Y, Z, B, A (East and West Side)**

The THLs are directed toward the **approach end** of the runway and are visible to pilots in position for takeoff or just commencing departure roll. There are two sets of THLs, each comprising a series of **red** in−pavement lights at 100’ spacing along the runway centerline.

There are four sets of THLs on the following runways at DFW:

- **17R/35L comprised of 16 pairs for a total of 32 lights at each end of the runway**

When operating at airports with RWSL, pilots will operate with the transponder “On” when departing the gate or parking area until arrival at the gate or parking area. This ensures interaction with the FAA surveillance systems which provide information to the RWSL system.

Runway Status Lights indicate runway status only. They do not substitute for an ATC clearance. Pilots are still required to receive an ATC clearance as they normally would for any operation on the runway.

Pilots are encouraged to learn more about the RWSL system at
http://www.faa.gov/air_traffic/technology/rwsl/

North Central United States

LAMBERT-ST. LOUIS INTERNATIONAL ATCT/TRACON

VISUAL SEPARATION PROCEDURES AT LAMBERT ST. LOUIS INTERNATIONAL AIRPORT (STL)

BACKGROUND. The purpose of the NOTAM is to inform pilots operating from Lambert-St. Louis International Airport of visual separation procedures between the ATCT and TRACON.

St. Louis ATCT and St. Louis TRACON are authorized to apply visual separation between aircraft under the control of either facility in order to maintain efficiency at STL Airport.

Both facilities must ensure that visual separation is applied only when weather conditions do not obscure visibility affecting the application of visual separation.

If you have any questions or concerns, please contact the manager or designee of one of the facilities below during normal business hours.

St. Louis Approach Control	(314) 890-1003
St. Louis Tower	(314) 890-4703

MINNEAPOLIS − ST. PAUL INTERNATIONAL ATCT/TRACON

BACKGROUND: The Use of Visual Separation for Aircraft Transitioning Between Minneapolis Air Traffic Control Tower and Minneapolis Terminal Radar Approach Control.

FAA Joint Order 7110.65 authorizes the application and use of Visual Separation between aircraft under the control of the same facility. Historically in Terminal Facilities, Air Traffic Controllers worked in an up/down environment. They would rotate through the RADAR room and the Tower. In recent years, the Federal Aviation Administration has separated these functions at select location and created a separate RADAR facility, known as a TRACON (Terminal RADAR Approach Control). This is the case in Minneapolis, Minnesota. Minneapolis ATCT (MSP) and Minneapolis TRACON (M98) are two separate and distinct air traffic facilities, each with their own employees.

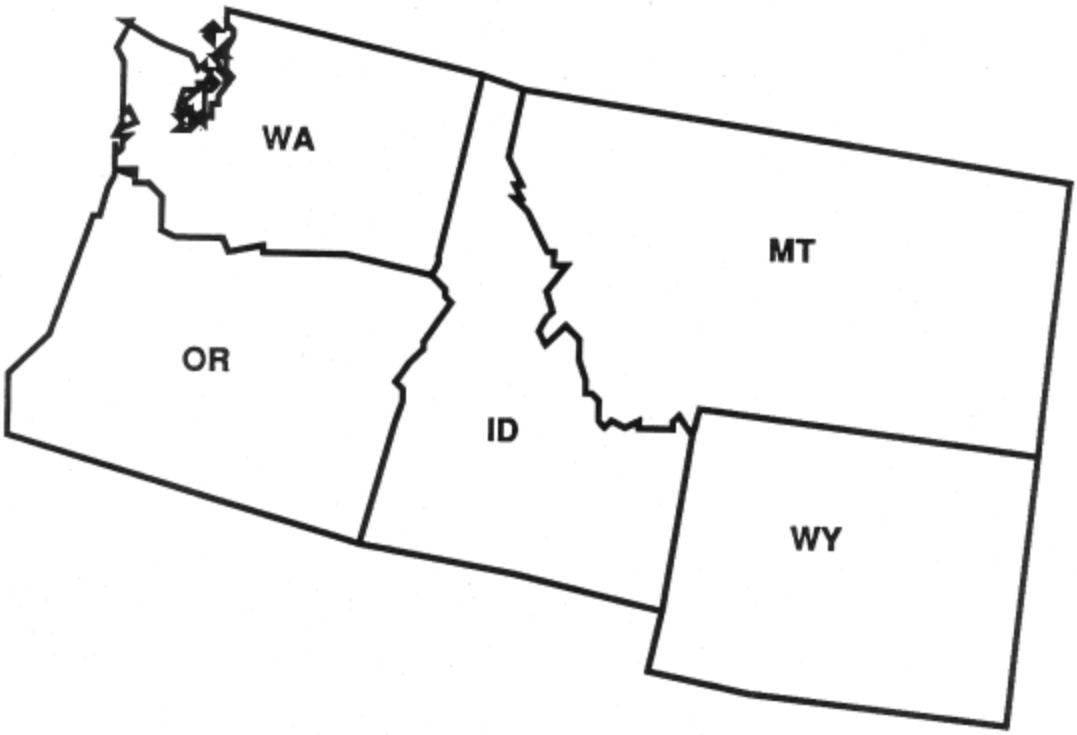

In keeping with the spirit and intent of the regulations and rules governing the National Airspace System, the use and application of Visual Separation for aircraft transitioning between the two facilities will continue as if the two facilities remained as one.

There will be no change in the use or application of Visual Separation in the Minneapolis Terminal area, therefore the users of the National Airspace System should see no difference and this will have no effect on the flying community.

Questions about this procedure should be referred to:

Jim Shadduck
Support Manager
Minneapolis TRACON (M98)
612-713-4000
E-mail: Jim.Shadduck@faa.gov

Northwest

SPOKANE APPROACH CONTROL (GEG) CONCURRENT OPERATIONS TO SPOKANE INTERNATIONAL AIRPORT (GEG) AND FAIRCHILD AIR FORCE BASE (SKA)

Background: The purpose of this Notice is to inform pilots landing/departing from either Spokane International Airport (GEG) or Fairchild Air force Base (SKA) under Instrument Flight Rules concerning the special use of visual separation to maintain efficiency at both airports.

Sequencing aircraft simultaneously to GEG and SKA under Instrument Flight Rules requires lateral and or vertical separation between aircraft while ensuring protected airspace for potential missed approaches. These requirements directly affect the capacity of both airports.

In a north flow, the ILS approach to GEG Runway 3 converges with the departure path of SKA Runway 5. GEG is located 2.9 NM east of SKA. The convergence and divergence of flight paths, and distance between airports has made it possible to utilize visual separation under certain weather conditions to reduce the spacing normally provided to aircraft landing and departing SKA and GEG.

INFORMATION: When weather/operational conditions permit, GEG Tower controllers will provide visual separation during the following operations:

- IFR arrivals to GEG Runway 3 and SKA departures Runway 5

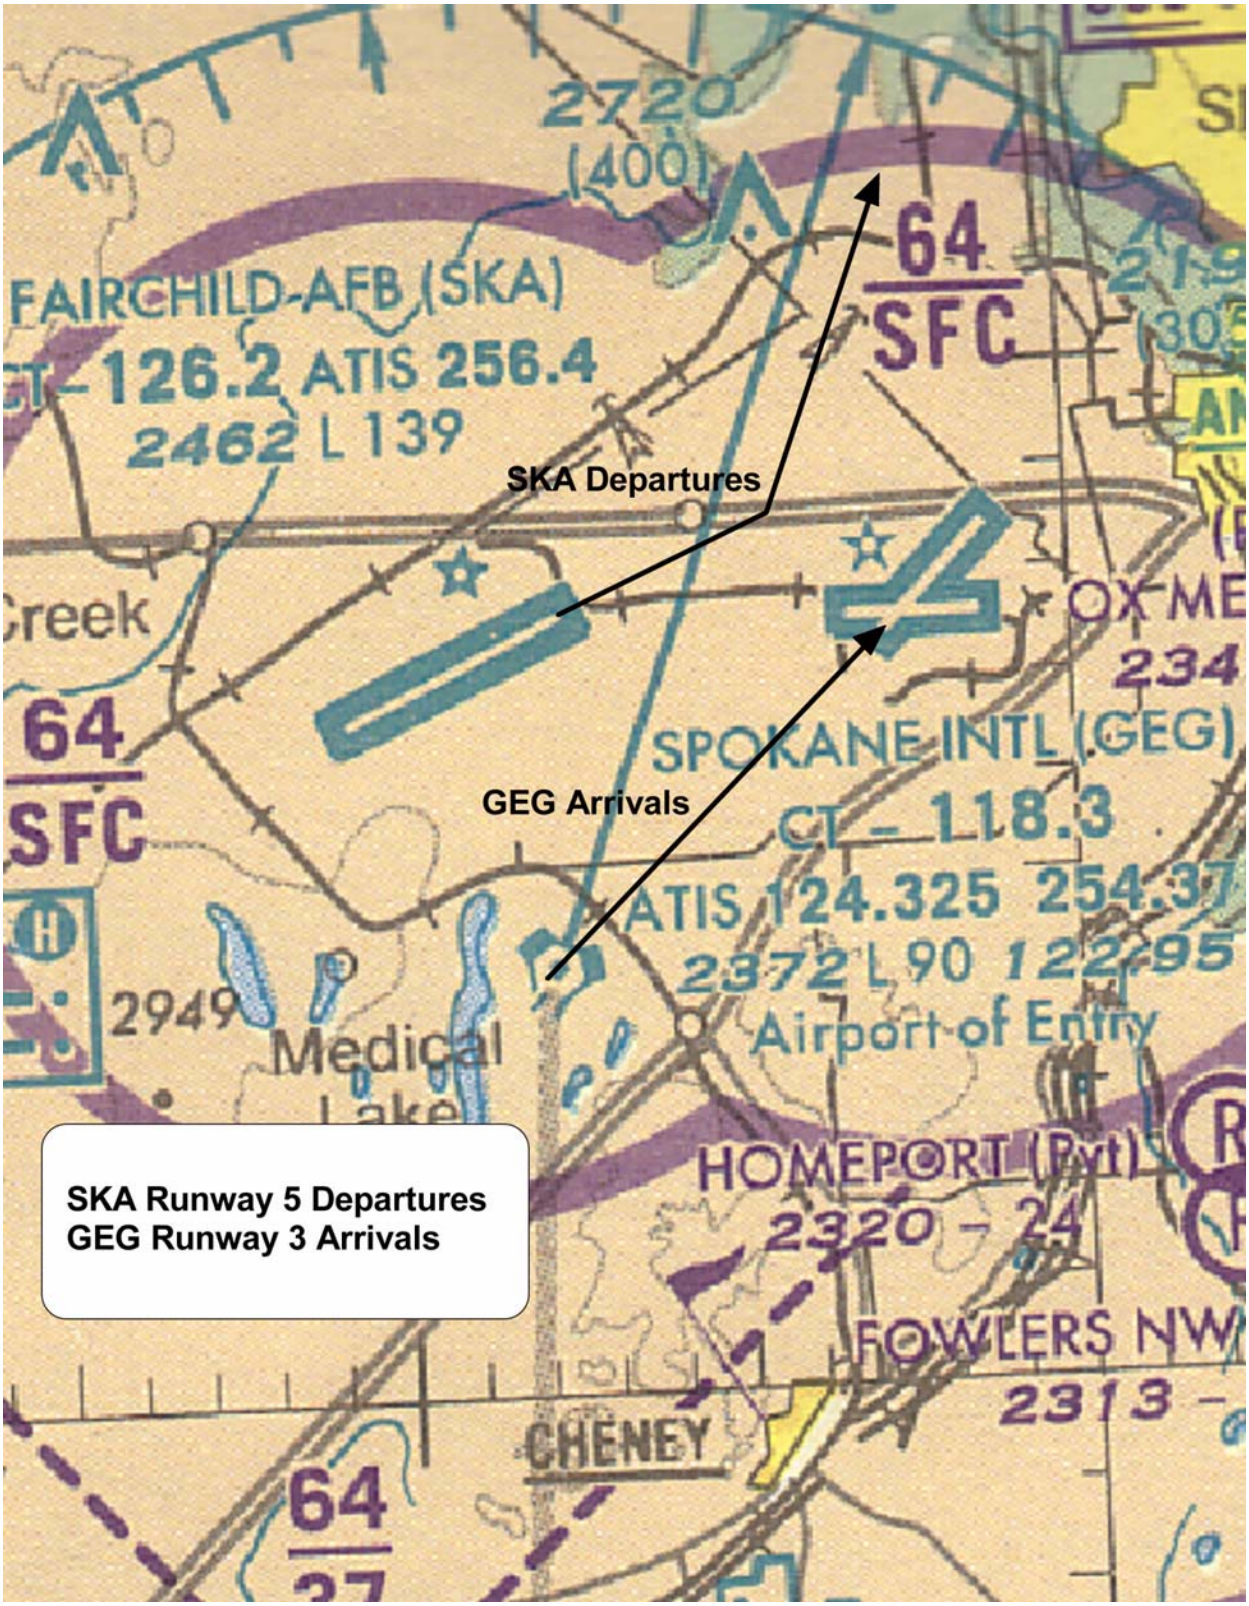

These procedures have proven to provide an equivalent level of safety compared to standard visual separation rules. This special use of visual separation procedures enables both airports to operate at or near capacity during periods of heavy demand.

If you have any questions or concerns, please contact the manager or designee of the facility listed below during normal business hours.

Spokane Approach Control: 509−363−6900

(ANM−530 5/8/03)

GEG RWY 3 ARRIVALS SKA RWY 5 DEPARTURES

SEATTLE APPROACH CONTROL (S46) CONCURRENT OPERATIONS TO BOEING FIELD (BFI) AND SEATTLE–TACOMA INTERNATIONAL AIRPORT (SEA)

Background: The purpose of this Notice is to inform pilots landing/departing from either Boeing King County International Airport (BFI) or Seattle–Tacoma International Airport (SEA) under Instrument Flight Rules concerning the special use of visual separation to maintain efficiency at both airports.

Sequencing aircraft simultaneously to BFI and SEA under Instrument Flight Rules requires lateral and or vertical separation between aircraft while ensuring protected airspace for potential missed approaches. These requirements directly affect the capacity of both airports.

In a south flow, the ILS approach to BFI Runway 13R converges with the ILS approaches to SEA Runways 16 L/C/R directly over BFI. In a north flow, the departure paths for aircraft departing north from SEA Runways 34L/R and BFI Runway 31L diverge directly over the north end of BFI Runway 31L. BFI field elevation is 21 feet MSL and SEA field elevation is 433 feet MSL. BFI is located 4.5 NM north of SEA. The convergence and divergence of flight paths, differences in field elevations and distance between airports has made it possible to utilize visual separation under certain weather conditions to reduce the spacing normally provided to aircraft landing and departing SEA and BFI.

INFORMATION: When weather/operational conditions permit, BFI Tower controllers will provide visual separation during the following operations:

IFR arrivals to BFI Runways 13R/L and SEA arrivals Runways 16L/C/R

IFR arrivals from BFI Runways 13R/L and IFR departures from SEA Runways 34L/C/R

IFR departures from BFI Runways 31L/R and IFR departures from SEA Runways 34L/C/R

IFR arrivals to SEA 16R/C/L and IFR departures from BFI Runways 31L/R

IFR arrivals to BFI Runways 31L/R and IFR arrivals to SEA Runways 16L/C/R

When weather/operational conditions permit, SEA Tower controllers will provide visual separation during the following operations:

IFR arrivals to BFI Runways 31L/R and IFR departures from SEA Runways 34L/C/R

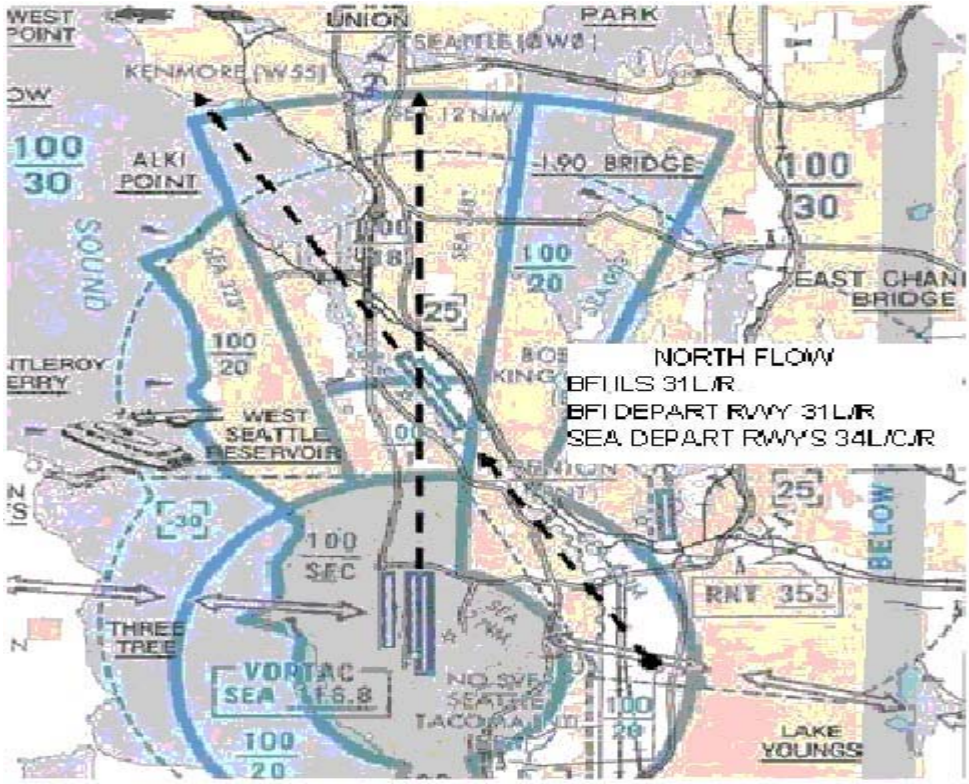

IFR arrivals to BFI Runways 31L/R and IFR arrivals to SEA Runways 16L/C/R

These procedures have proven to provide an equivalent level of safety compared to standard visual separation rules. This special use of visual separation procedures enables both airports to operate at or near capacity during periods of heavy demand.

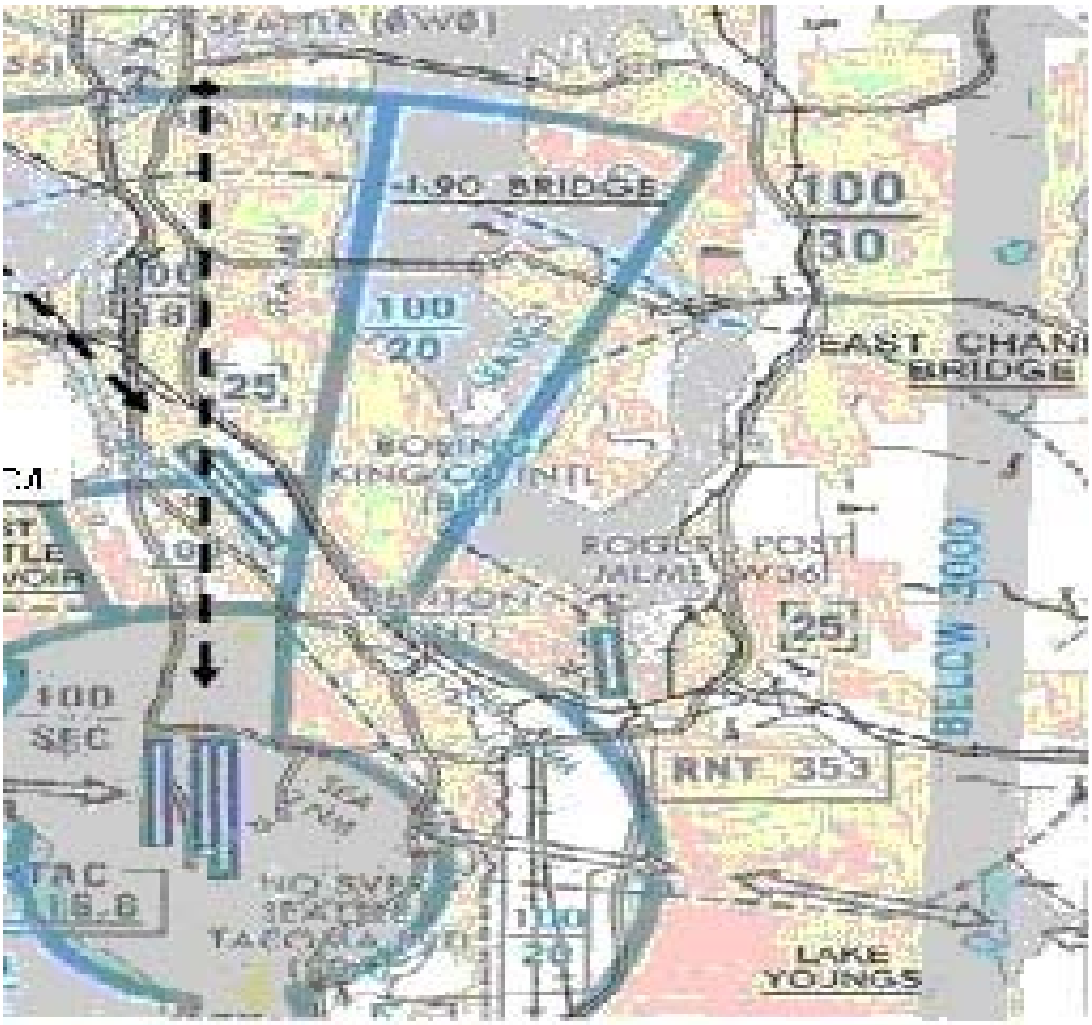

If you have any questions or concerns, please contact the manager or designee of one the facilities listed below during normal business hours.

LOS ANGELES
AIR ROUTE TRAFFIC CONTROL CENTER

Limited Long Range Radar Coverage

Effective Until Further Notice

Radar services are limited from surface to 14,500 feet in the area from PSP to 15 NM south of PKE to EED to 15 NM south of GFS to PSP. ATC may not be depicting all the traffic. Visual vigilance is highly recommended.

(AWP−530 11/29/01)

SAN FRANCISCO SOIA/PRM

Effective Tuesday, October 26, 2004. During the hours of 0700−2200 local, SFO ATCT may utilize ILS PRM and LDA PRM approaches as weather and arrival traffic demand dictate. Aircraft arriving from the east (primarily over CEDES intersection) should expect Runway 28R; aircraft arriving from the south, west, and north should expect Runway 28L. If unable to participate in PRM approaches, aircraft operators are required to contact FAA ATCSCC directly at 1−800−333−4286 or at 703−904−4452 prior to departure to obtain a pre−coordinated arrival time.

Non−participating aircraft may encounter delays attributable to PRM flow.

Pilot requirements and procedures are outlined in the U.S. Terminal Procedures Publications on the pages entitled “ATTENTION ALL USERS OF ILS PRECISION RUNWAY MONITOR (PRM) OR LDA PRECISION RUNWAY MONITOR (PRM).”

Denver Tower

Standard Ramp Taxi Routes

Denver, Colorado

Denver Ramp Tower has instituted Standard Ramp Departure Taxi Routes for aircraft departing the main ramp and south cargo. Pilots who are unable to comply with standardized routes should advise Ramp Control on initial contact. The route will be issued by Ramp Control as "Standard Taxi East" or "Standard Taxi West".

Standard Ramp Departure Taxi Routes

Standard Taxi East	
Origin	**Routing**
Concourse A – South Side	Taxi via Taxiway Alfa Sierra (AS) towards Apron Location Point 2E. Hold short of Taxiway Lima (L). Contact Ground on 121.85 when number one at Apron Location Point 2E.
Concourse A – North Side	Taxi via Taxiway Bravo Sierra (BS) towards Apron Location Point 4E Hold short of Taxiway Lima (L). Contact Ground on 121.85 when number one at Apron Location Point 4E.
Concourse B – South Side	Taxi via Taxiway Bravo Sierra (BS) towards Apron Location Point 4E. Hold short of Taxiway Lima (L). Contact Ground on 121.85 when number one at Apron Location Point 4E.
Concourse B – North Side	Taxi via Taxiway Charlie Sierra (CS) towards Apron Location Point 6E. Hold short of Taxiway Lima (L).Contact Ground on 121.85 when number one at Apron Location Point 6E.
Concourse C – South Side	Taxi via Taxiway Charlie Sierra (CS) towards Apron Location Point 6E. Hold short of Taxiway Lima (L). Contact Ground on 121.85 when number one at Apron Location Point 6E.
Concourse C – North Side	Taxi via Taxiway Charlie November (CN) towards Apron Location Point 7E. Hold short of Taxiway Lima (L). Contact Ground on 121.85 when number one at Apron Location Point 7E.
South Cargo	Taxi east on Taxiway Alfa (A). Hold short of Taxiway Lima (L).Contact Ground on 121.85 when number one at the taxiway clearance bar.

Standard Ramp Departure Taxi Routes

Standard Taxi West	
Origin	**Routing**
Concourse A – South Side	Taxi via Taxiway Alfa Alfa (AA) towards Apron Location Point 1W. Hold short of Taxiway Golf (G). Contact Ground on 127.5 when number one at Apron Location Point 1W.
Concourse A – North Side	Taxi via Taxiway Alfa November (AN) towards Apron Location Point 3W. Hold short of Taxiway Golf (G). Contact Ground on 127.5 when number one at Apron Location Point 3W.
Concourse B – South Side	Taxi via Taxiway Alfa November (AN) towards Apron Location Point 3W. Hold short of Taxiway Golf (G). Contact Ground on 127.5 when number one at Apron Location Point 3W.
Concourse B – North Side	Taxi via Taxiway Bravo November (BN) towards Apron Location Point 5W. Hold short of Taxiway Golf (G). Contact Ground on 127.5 when number one at Apron Location Point 5W.
Concourse C – South Side	Taxi via Taxiway Bravo November (BN) towards Apron Location Point 5W. Hold short of Taxiway Golf (G). Contact Ground on 127.5 when number one at Apron Location Point 5W.
Concourse C – North Side	Taxi via Taxiway Charlie November (CN) towards Apron Location Point 7W. Hold short of Taxiway Golf (G). Contact Ground on 127.5 when number one at Apron Location Point 7W.

STANDARDIZED TAXI ROUTES FOR LOS ANGELES INTERNATIONAL AIRPORT (KLAX)

The following Standardized Taxi routes may be issued to all taxiing aircraft.

North Route

Taxi towards taxilane Sierra (S) taxi northbound on taxilane Sierra (S), and at Check-point-1 contact Ground Control on frequency 121.65, hold short of taxiway Delta (D).

Taxilane Sierra (S) is not visible from the ATCT

South Route

Taxi towards taxiway Romeo (R) taxi southbound on taxiway Romeo (R), and at Check-point-2 contact Ground Control on frequency 121.4, hold short of taxiway Charlie (C).

Taxiway Romeo (R) is not visible from the ATCT

Bradley Route

Taxi toward Taxilane Sierra (S) taxi southbound on Taxilane Sierra (S), and at Check–point–1 contact Ground Control on frequency 121.75, hold short of Taxiway Charlie (C).

Taxilane Sierra (S) is not visible from the ATCT

West Route

Taxi westbound on Taxiway Charlie (C) towards taxiway Alfa-Alfa (AA), hold short of taxiway Alfa-Alfa (AA), contact Ground Control on frequency 121.65 when number one approaching Taxiway Alfa-Alfa (AA).

Taxiway Alfa-Alfa (AA) is not visible from the ATCT

Bridge Route

Taxi towards taxiway Alfa-Alfa (AA) taxi southbound on taxiway Alfa-Alfa (AA), and at Check-point-3 contact Ground Control on frequency 121.4, hold short of taxiway Charlie (C).

Taxiway Alfa-Alfa (AA) is not visible from the ATCT

Romeo Route

Taxi westbound on Taxiway Charlie (C) towards Taxiway Romeo (R), hold short of Taxiway Romeo (R), contact Ground Control on frequency 121.65 when number one approaching Taxiway Romeo (R).

Taxiway Romeo (R) is not visible from the ATCT.

Van Nuys Airport
(VNY)

Van Nuys, California

Simultaneous Same Direction Operations

Van Nuys Air Traffic Control Tower has been granted a waiver that authorizes air traffic personnel to conduct simultaneous, same direction operations on parallel runways separated by less than 500 feet between centerlines for lightweight single−engine propeller driven aircraft and Category II and III twin engine propeller driven aircraft.

SAN FRANCISCO INTERNATIONAL AIRPORT EXPANDED CHARTED VISUAL FLIGHT PROCEDURES

(Until Further Notice)

GENERAL

San Francisco International Airport (SFO) is subject to stratus moving slowly from West to East, creating a reportable weather ceiling over the airport, while the final approach area for Runways 28R and 28L have no significant ceiling or visibility conditions. And expanded charted visual flight procedure (E/CVFP) has been developed to maximize the level of airport efficiency during the unusual weather conditions described above.

MINIMUMS

The E/CVFP incorporates the following weather minimums:

SFO ceiling 2100 feet and visibility 5 miles; or,

SFO ceiling 1000 feet and visibility 3 miles, and,

visibility 5 miles in the Eastern quadrant (030–120), and,

ceiling 2400 and visibility 5 miles at the automated weather observing system (AWOS) located at N37º 34.338 W122º 15.598 LOM.

In the event the AWOS is inoperative, weather at San Carlos (SQL) is required to be at least ceiling 2400 feet and visibility 5 miles.

Although the listed weather minima are in effect aircraft should not expect simultaneous E/CVFP approaches unless N37º 34.338 W122º 15.598 AWOS ceiling is at least 3500 feet and visibility is at least 5 miles.

SPACING AND SEQUENCING

Controllers will clear aircraft for the E/CVFP in accordance with the provisions of Order 7110.65, Air Traffic Control. They will not utilize phrases requesting or requiring aircraft to ”fly right alongside”, “wingtip to wingtip”, or “directly abeam” other aircraft. Additionally, controllers will not assign instructions or require aircraft to pass and/or overtake other aircraft on the adjacent final approach course. Preferably, aircraft will be vectored to achieve a slightly staggered position of approximately 1/8 to 1/4 mile behind the aircraft on the adjacent final approach course. Heavy aircraft and B757's will not be authorized to overtake another aircraft on the adjacent final approach course. Wake turbulence cautionary advisories will be issued, as appropriate.

GO-AROUND PROCEDURE

The Tipp Toe and Quiet Bridge approaches are visual approaches, and as such have no missed approach segment. If a go-around is necessary, aircraft will be issued an appropriate advisory/clearance/instruction by

the tower or TRACON. To ensure standard separation from other traffic, these instructions will include the assignment of a specific heading and altitude, normally, the following procedures will apply:

Tipp Toe Visual Runway 28L

In the event of a go-around turn left heading 265, climb and maintain 3000; or as directed by Air Traffic Control.

Quiet Bridge Visual Runway 28R

In the event of a go-around turn right heading 310, climb and maintain 3000; or as directed by Air Traffic Control

Los Angeles International Airport (LAX)

Noise Abatement Procedures

Successive or simultaneous departures from Runways 24L/R and Runways 25 L/R are authorized, with course divergence beginning within 2 miles from the departure end of parallel runways, due to noise abatement restrictions.

The published departure procedure from Runways 25L/R may include a left turn in addition to the at or below 3000- foot altitude restriction, at the SMO 154º/SMO 160º crossing radial or the DOCKR/HIIPR RNAV fixes.

When the published departure procedure includes a left turn, expeditious compliance of this turn is required, when crossing the SMO 154º/160º radial or DOCKR/HIPPR RNAV fix, to ensure simultaneous departure separation from the north complex Runways 24L/R.

Failure to initiate the turn in an expeditions manner could result in the filing of a pilot deviation due to the automatic features of the Traffic Analysis and Review Program (TARP).

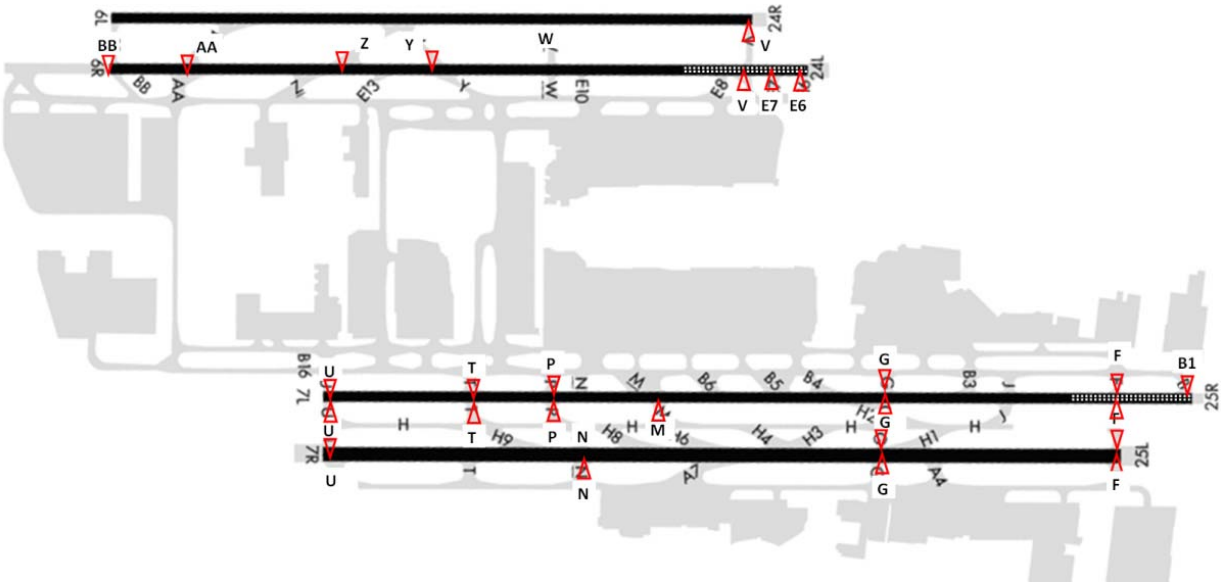

Los Angeles International Airport (LAX)
Runway Status Lights (RWSLs)

LAX Runway Status Lights (RWSLs) are operating. RWSLs are red in−pavement lights that serve as warning lights on runways and taxiways indicating that it is unsafe to enter, cross, or begin takeoff on a runway when illuminated.

Note: RWSLs indicate a runway's status only, they do not indicate clearance. Pilots and vehicle operators are required to receive a clearance from air traffic control before proceeding.

Runway Status Lights at Los Angeles (LAX)

Takeoff Hold Lights (THLs)

- Runway 24L (North Complex)
- Runway 25R (South Complex)

Runway Entrance Lights (RELs)

South Complex:

- Taxiway B1 (North of Runway25R)
- Taxiway F (North and South of Runways 25L/25R)
- Taxiway G (North and South of Runways 25L/25R)
- Taxiway M (South of Runway 25R)
- Taxiway N (South of Runway 25L)
- Taxiway P (North and South of Runway 25R)
- Taxiway T (North and South of Runway 25R)
- Taxiway U (North and South of Runway 25R and North of Runway 25L)

North Complex:

- Taxiway E6 (South of Runway 24L)
- Taxiway E7 (South of Runway 24L)
- Taxiway V (South of Runway 24R)
- Taxiway V (South of Runway 24L)
- Taxiway W (North of Runway 24L)
- Taxiway Y (North of Runway 24L)
- Taxiway Z (North of Runway 24L)
- Taxiway AA (North of Runway 24L)
- Taxiway BB (North of Runway 24L)

For more information, visit the website: http://www.faa/gov/air_traffic/technology/rwsl/

NOTICES TO AIRMEN (NOTAM) FOR THE PROTOTYPE RUNWAY STATUS LIGHTS (RWSL) AT SAN DIEGO INTERNATIONAL AIRPORT (SAN), SAN DIEGO, CA

The Federal Aviation Administration (FAA) operates a prototype Runway Status Lights (RWSL) system at SAN.

Runway Status Lights, indicate when a runway is unsafe to enter, cross, or take−off through the use of in−pavement red lights installed only at selected intersections and runways as described below.

LIGHTING

RWSL conveys the **runway occupancy status**, indicating when a runway is unsafe to enter through the use of red in−pavement warning Runway Entrance Lights (RELs) and when it is unsafe to take off through the use of red in−pavement warning Takeoff Hold Lights (THLs).

The RELs are a series of red lights, typically 6, 7 or up to 20+ in−pavement lights spaced evenly along the taxiway centerline from the taxiway hold line to the runway edge. One REL is placed just before the hold line and one REL is placed near the runway centerline. All RELs are directed toward the **runway hold line** and are oriented to be visible only to pilots and vehicle operators entering or crossing the runway from that location.

RELs are operational at the following intersections at SAN:

- **Runway 9/27**
  - **Taxiways B1, B6, B10, C1, C2, C6**

When operating at airports with RWSL, pilots will operate with the transponder “On” when departing the gate or parking area until arrival at the gate or parking area. This ensures interaction with the FAA surveillance systems which provide information to the RWSL system.

Runway Status Lights indicate runway status only. They do not substitute for an ATC clearance. Pilots are still required to receive an ATC clearance as they normally would for any operation on the runway.

Pilots are encouraged to learn more about the RWSL system at
http://www.faa.gov/air_traffic/technology/rwsl/

SAN DIEGO INTERNATIONAL AIRPORT AIR TRAFFIC CONTROL TOWER (SAN) CONCURRENT OPERATIONS TO NAVAL AIR STATION NORTH ISLAND (NZY)

Background: The purpose of this Notice is to inform pilots landing/departing from either San Diego International Airport (SAN) or Naval Air Station (NAS) North Island (NZY) concerning the use of visual separation to maintain efficiency at both airports.

Helicopters and fixed−wing aircraft flying in Visual Meteorological Conditions (VMC) while transitioning SAN Class B airspace over San Diego Bay and SAN Runway 27 arrivals are required to be on the same frequency.

An ATC waiver has made it possible to utilize visual separation under certain weather conditions to eliminate rapid frequency changes, frequency congestion, or traffic conflictions caused by rerouting aircraft.

INFORMATION: When weather/operational conditions permit, SAN Tower controllers will provide visual separation during the following operations:

- Instrument Flight Rules arrivals to SAN Runway 27 and Visual Flight Rules helicopters and fixed−wing aircraft transitioning SAN Class B airspace over San Diego Bay.

These procedures have proven to provide an equivalent level of safety compared to standard visual separation rules. This special use of visual separation enables both airports to operate more efficiently and safely.

If you have any questions or concerns, please contact the manager or designee of the facility listed below during normal business hours.

San Diego International Airport, Air Traffic Control Tower: 619−299−0677

(AJV−W21, 7/20/2017)

JACK NORTHROP FIELD/HAWTHORNE MUNICIPAL AIRPORT (HHR) IFR DEPARTURES AND LOS ANGELES AIRPORT (LAX) IFR ARRIVALS

Hawthorne Tower is authorized to separate HHR Runway 25 departures and LAX arrivals to runway 24L/R and 25L/R visually when weather conditions allow the use of visual separation. IFR departures off Runway 25 at HHR are required to turn left immediately after departure and will be assigned the IFR Obstacle Departure Procedure (ODP) or other equivalent Departure Procedure to include Radar Vectors that ensure the departure course diverges immediately after departure by 30 degrees or more from the LAX final approach course.

When weather conditions preclude the use of visual separation, LAX tower, HHR tower, and SoCal TRACON are authorized to conduct simultaneous runway operations between aircraft departing HHR runway 25 departures and aircraft on the final approach course to runways 24L/R and 25L/R at LAX. IFR departures off Runway 25 at HHR are required to turn left immediately after departure and be assigned the ODP or other equivalent Departure Procedure to include Radar Vectors that ensure the departure course diverges immediately after departure by 30 degrees or more from the LAX final approach course.

Alaska

Hawaii

MODE C INTRUDER ALERT SERVICES

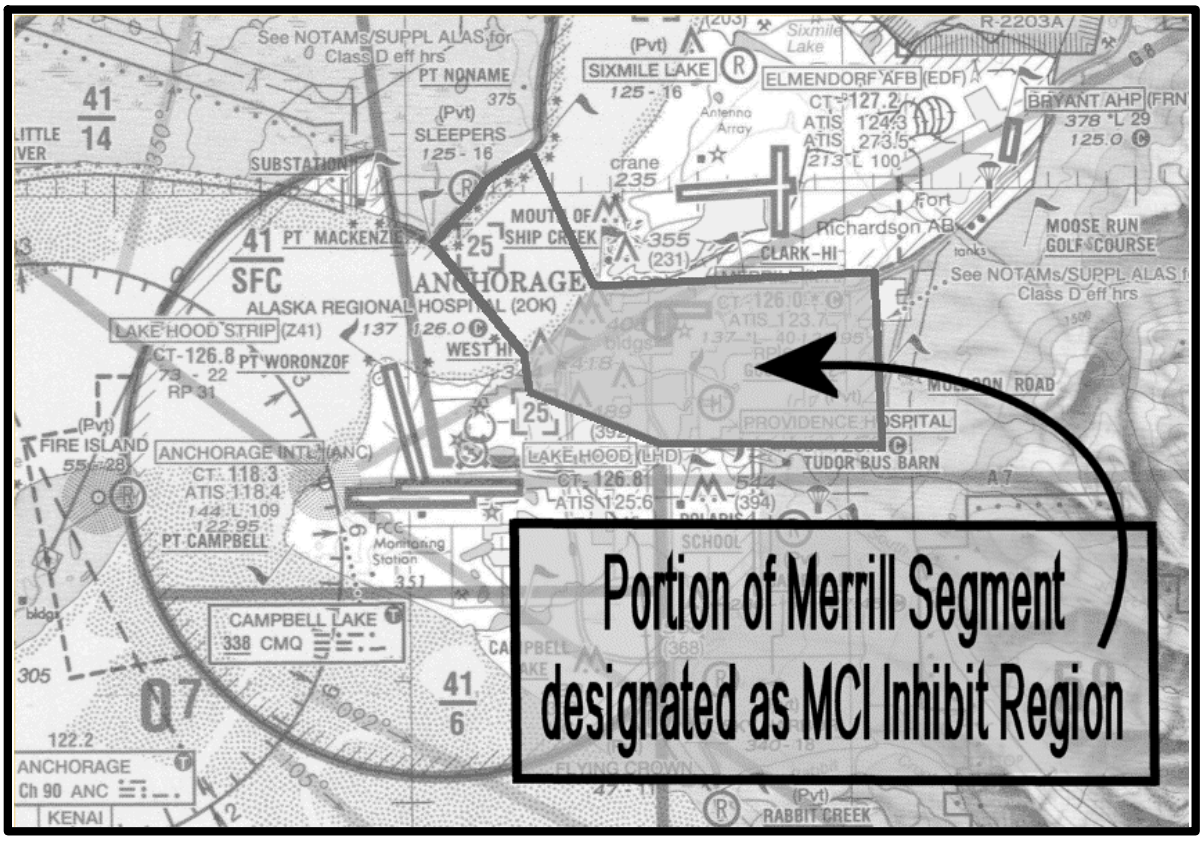

Merrill Field Airport

Anchorage, Alaska

MODE C INTRUDER ALERT is a function of certain air traffic control automated systems designed to alert radar controllers to existing or pending situations between a tracked target (known IFR or VFR aircraft) and an untracked target (an unknown IFR or VFR aircraft equipped with an operating Mode C transponder) that requires immediate attention/action.

Mode C Intruder Alert provides an aural and associated visual alert that produces enlarged and blinking alphanumeric data blocks displayed on the controller's radar display. Due to the close proximity of aircraft, the enlarged and blinking data blocks overlap and may make the radar unusable during periods of high air traffic activity. Additionally, the associated aural alarm may distract the controller from performing air traffic control duties.

The Mode C Intruder Alert base altitude has been adjusted from 643 feet above Mean Sea Level to 1,201 feet above Mean Sea Level within that portion of the Merrill Class D Surface Area that overlies land southeast of the south shore of Knik Arm. This action eliminates Mode C Intruder Alerts in the Merrill Field traffic pattern, while continuing to provide alerts in the areas over the Knik Arm, east of Muldoon Road and South of Tudor Road.

(AAL−530 8/7/01)

MODE C INTRUDER ALERT SERVICES

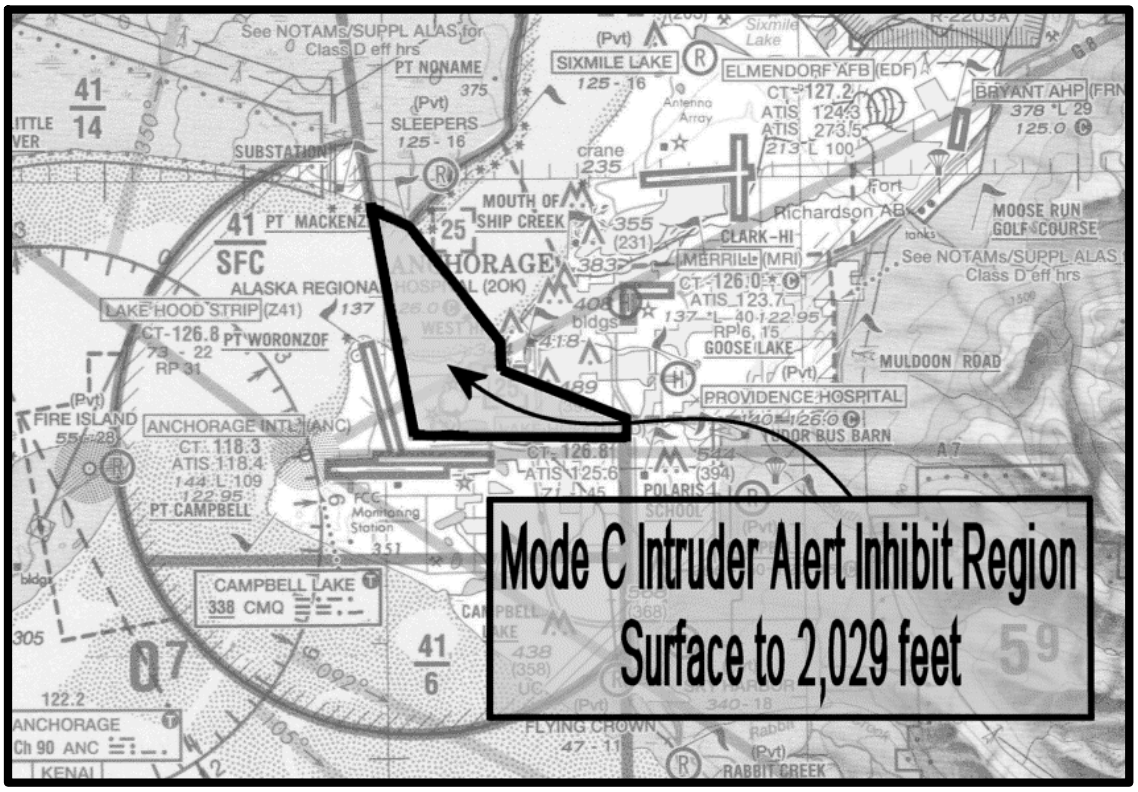

Lake Hood Seaplane Base

Anchorage, Alaska

MODE C INTRUDER ALERT is a function of certain air traffic control automated systems designed to alert controllers to existing or pending situations between a tracked target (a known IFR or VFR aircraft) and an untracked target (an unknown IFR or VFR aircraft equipped with an operating Mode C transponder) that requires immediate attention/action.

Mode C Intruder Alert provides an aural and associated visual alert that produces enlarged and blinking alphanumeric data blocks on the controller's radar display. Due to the close proximity of aircraft, the enlarged and blinking data blocks may make the radar unusable and the associated aural alarm may distract the controller from performing air traffic control duties.

During periods of high air traffic activity, Lake Hood Tower may elect to temporarily disable the Mode C Intruder Alert function within the Lake Hood Segment (as described in 14 CFR 93.55) below 2,029 feet AGL. Suspensions of Mode C Intruder Alert service will be broadcast on the Lake Hood ATIS.

(AAL−530 8/7/01)

MODE C INTRUDER ALERT SERVICES

Point Mackenzie Area

Northwest of Anchorage, Alaska

MODE C INTRUDER ALERT is a function of certain air traffic control automated systems designed to alert controllers to existing or pending situations between a tracked target (a known IFR or VFR aircraft) and an untracked target (an unknown IFR or VFR aircraft equipped with an operating Mode C transponder) that requires immediate attention/action.

Mode C Intruder Alert provides an aural and associated visual alert that produces enlarged and blinking alphanumeric data blocks on the controller's radar display. Due to the close proximity of aircraft, the enlarged and blinking data blocks may make the radar unusable and the associated aural alarm distracts the controller from performing air traffic control duties.

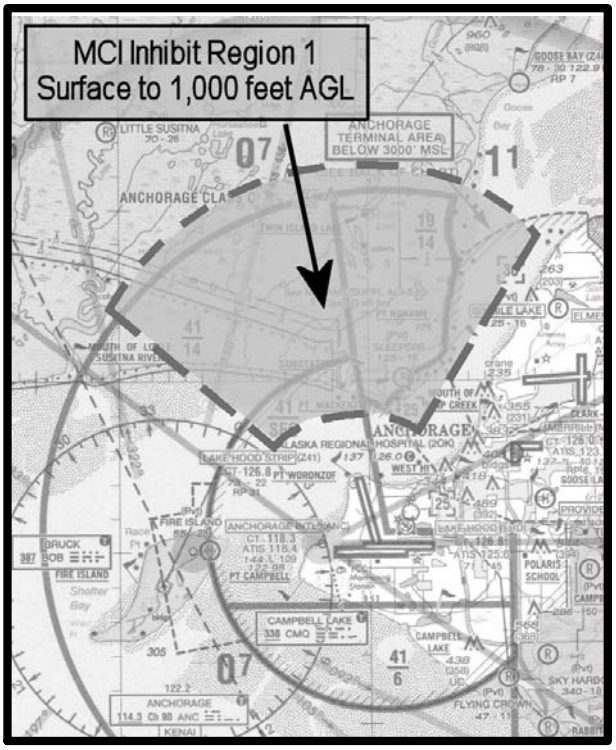

During periods of high air traffic activity in the vicinity of Point Mackenzie, Anchorage Approach Control may temporarily disable the Mode C Intruder Alert function within one or both of the following areas:

Region 1: A dual range, dual azimuth area, based upon the Anchorage Airport Surveillance Radar (ASR) antenna, from 285° magnetic to 007° magnetic, between 3.66 nautical miles and 10 nautical miles, and from the surface up to and including 1,000 feet above ground level (AGL).

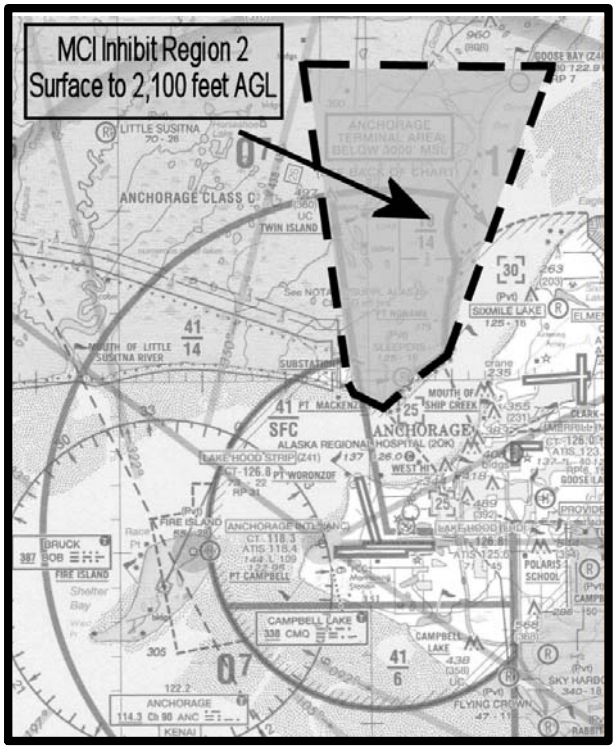

Region 2: From the surface up to and including 2,100 feet AGL within a polygon defined by the following latitude/longitude points:

61:24:00.0N	149:50:00.0W	(1ST & LAST POINT)
61:15:36.0N	149:55:00.0W	(NEXT POINT)
61:14:10.0N	149:59:00.0W	(NEXT POINT)
61:14:30.0N	150:00:30.0W	(NEXT POINT)
61:24:00.0N	150:04:00.0W	(NEXT POINT)

A message will be broadcast on the Anchorage ATIS, Lake Hood ATIS, and MRI ATIS when the Mode C Intruder Alert function is disabled.

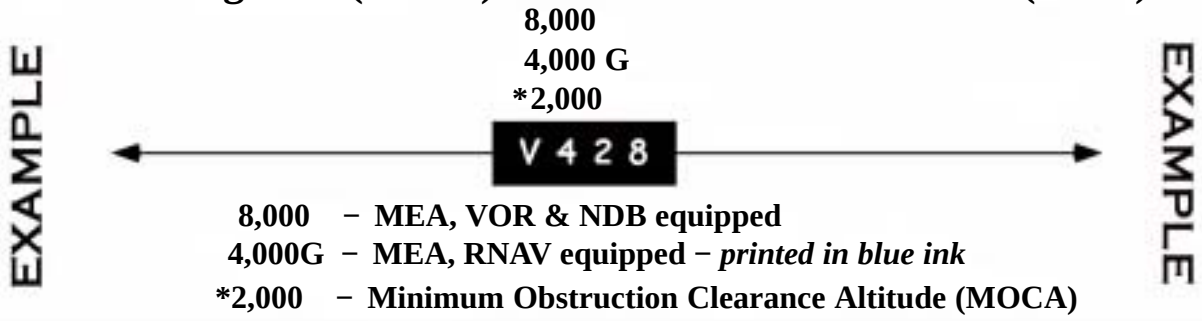

Mode C Alert Inhibit Region 1

Mode C Alert Inhibit Region 2

Revised IFR Enroute Low Altitude Chart, Route Data, Area Navigation (RNAV) Minimum Enroute Altitude (MEA)

Implementation of Instrument Flight Rules (IFR) Area Navigation (RNAV) Operations Using Global Positioning Systems (GPS) In Alaska

When. May 15, 2003

Type. Permanent

Purpose.

To enable, in Alaska, the use of Global Positioning System/Wide Area Augmentation Systems (GPS/WAAS) for IFR RNAV in lieu of ground−based navigation aids, including altitudes below current IFR Minimum Enroute Altitudes (MEAs). In general, IFR enroute altitudes are determined by (1) obstacle clearance; (2) the lowest altitude for receiving ground−based radio navigation signals; and (3) the lowest altitude for two−way voice communication with Air Traffic Control (ATC). No accommodation was made for IFR altitudes determined by fixes using other than ground−based navigation aids. Under SFAR No. 97, operators using IFR certified TSO C145a and TSO C146a GPS WAAS RNAV systems are permitted to conduct operations over routes in Alaska at the lowest MEA based only on route obstacle assessments and ATC two−way voice communication capability.

Operations.

SFAR No. 97 allows the use of IFR−certified RNAV GPS/WAAS systems in lieu of ground facilities. This SFAR can be used for U.S. and foreign Part 91 operations, as well as Part 119 operations, Part 125 certificate holders, and Part 129 operations specifications holders, commercial, and certificated air carrier operators, in Alaska. The SFAR establishes training requirements for operators, including service degradation and equipment failure modes. It allows operators subject to this SFAR to operate over Air Traffic Service (ATS) routes where the MEA for a route or route segment is lower for GPS/WAAS IFR RNAV−equipped aircraft than the MEA for operators equipped only with ground−based navigation systems. This flexibility allows those GPS/WAAS IFR RNAV−equipped operators to conduct operations at the lowest permissible altitude in an attempt to avoid in−flight icing or other adverse weather conditions.

Required equipment.

TSO C145a and TSO C146a GPS WAAS navigation systems are authorized to be used as the only means of navigation on Federal airways and other published ATS routes in lieu of ground−based navigation aids in Alaska. In the absence of a WAAS signal, these systems continue to provide navigation guidance using fault detection and exclusion (FDE) or receiver autonomous integrity monitoring (RAIM) techniques. Commercial operators are required to have dual TSO C145a or TSO C146a GPS WAAS navigation equipment, while Part 91 operations require at least one.

New chart features/symbology.

The new RNAV MEAs will be depicted on the Low Altitude Enroute Charts as in the example at the top of this notice. Without a Special (RNAV) MEA depicted, the Standard MEA will be used.

Chart terminology.

“Special MEA” refers to the minimum enroute IFR altitude using GPS/WAAS systems on an ATS route, ATS route segment, or other direct route outside the operational service volume of ground−based navigation aids. “Standard MEA” refers to the minimum enroute IFR altitude on an ATS route, ATS route segment, or other direct route that uses very high frequency/ultra high frequency (VHF/UHF) ground−based navigation aids.

ATS route.

The term ATS route includes Jet Routes, Colored Federal Airways, VOR Federal Airways, and RNAV Routes.

(AAL−535 3/20/03)

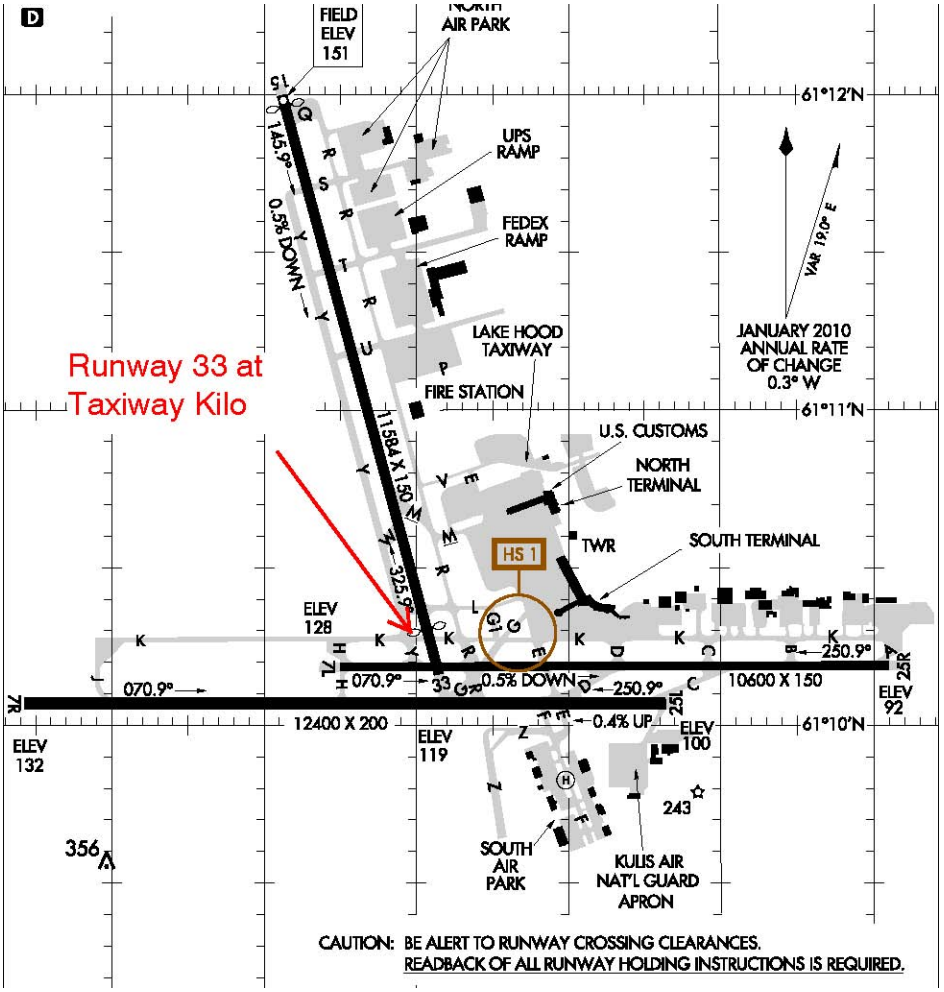

LINE UP AND WAIT OPERATIONS

Ted Stevens Anchorage International Airport

Anchorage, Alaska

LINE UP AND WAIT (LUAW) procedures are a tool used by air traffic control to expedite the movement of aircraft on an airport. Normally, LUAW is not authorized for intersection departures between the hours of sunset and sunrise. Anchorage Tower operates under a waiver that permits these operations on Runway 33 at Taxiway Kilo between the hours of sunset and sunrise under the following conditions:

1. The intersection must be visible from the tower.
2. Runway 33 is restricted to departures only.
3. Aircraft shall not simultaneously line up and wait from any other point on Runway 33.

SPECIAL USE AIRSPACE

W–220

Oliktok, Alaska

Warning Area W–220 is being established to support research conducted by the Department of Energy as part of the North Slope of Alaska Atmospheric Radiation Measurement Climate Research Facility.

Due to the yearly print cycle of the Point Barrow Sectional, W–220 will be effective before the charting in 2016. This graphic notice is provided until the Point Barrrow Sectional chart is updated to reflect the W–220 airspace. W–220 is divided in 16 sub–areas, W–220A through H, each with a high and low division. Only W–220A and W–220B will appear on the Sectional chart, the remaining areas fall outside the lateral boundaries of the U.S. Sectional publications, extending north to 82°00'00"N. In all subdivisions, the Times of Use are by NOTAM, the Controlling Agency is Anchorage ARTCC and the Using Agency is U.S. Department of Energy, Office of Science, Biological and Environmental Research. The descriptions of W–220A and W–220B are as follows:

W–220A Low Oliktok, AK

Boundaries: Beginning at lat. 70°47'00"N., long. 150°58'15"W.;
To lat. 71°37'00"N., long 151°01'03"W.;
To lat. 71°37'00"N., long 148°42'04"W.;
To lat 70°47'00"N., long 148°44'52"W.;
To the point of beginning.
Altitudes: Surface up to but not including 2,000 feet MSL.

W–220A High Oliktok, AK

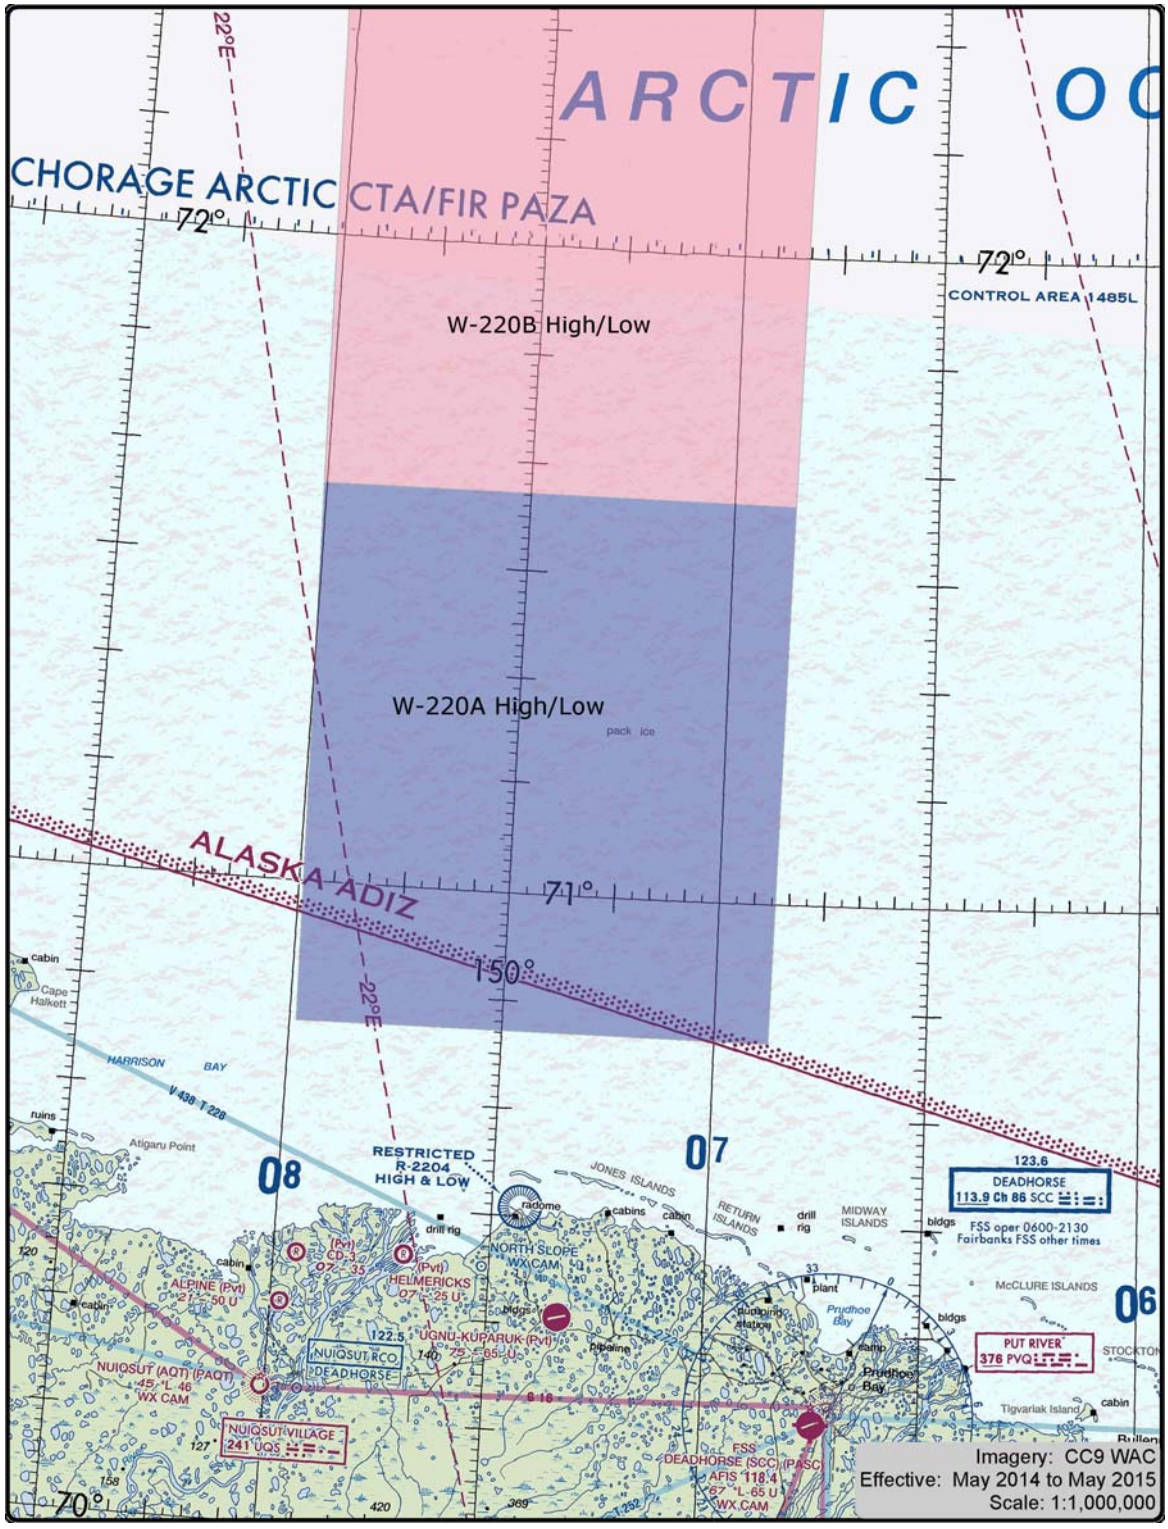

Boundaries: Beginning at lat. 70°47'00"N., long. 150°58'15"W.;
To lat. 71°37'00"N., long. 151°01'03"W.;
To lat 71°37'00"N., long. 148°42'04"W.;
To lat 70°47'00"N., long. 148°44'52"W.;
To the point of beginning.
Altitudes: 2,000 feet MSL up to but not including 2,000 feet MSL.

W– 220B Low Oliktok, AK
Boundaries: Beginning at lat. 71°37'00"N., long. 151°01'03"W.;
To lat. 72°27'00"N., long. 151°04'09"W.;
To lat. 72°27'00"N., long. 148°39'03"W.;
To lat. 71°37'00"N., long. 148°42'04"W.;
To the point of beginning.
Altitudes: Surface up to but not including 2,000 feet MSL.

W– 220B High Oliktok, AK
Boundaries: Beginning at lat. 71°37'00"N., long. 151°01'03"W.;
To lat. 72°27'00"N., long. 151°04'09"W.;
To lat. 72°27'00"N., long. 148°39'03"W.;
To lat. 71°37'00"N., long. 148°42'04"W.;

To the point of beginning.

Altitudes: 2,000 feet MSL up to but not including 10,000 feet MSL.

Section 4. Major Sporting and Entertainment Events

CHICAGOLAND SPEEDWAY NASCAR RACES

SEPTEMBER 14 THROUGH SEPTEMBER 18, 2017

In anticipation of a significant number of aircraft traveling to the Chicago, Illinois, area during the Chicagoland Speedway NASCAR races, a temporary air traffic control tower and special air traffic procedures will be incorporated at the Lewis University Airport (LOT) at Romeoville, Illinois. The operation of the temporary tower will begin Thursday, September 14th and continue through Sunday, September 18th. In the event that a NASCAR race is postponed until Monday, September 19th the tower will be open and these procedures shall also apply on that day.

There will not be a slot or reservation program into the Chicago area airports for these events.

IFR ARRIVAL PROCEDURES TO LOT or JOLIET (JOT)

Aircraft filing for the destination airports of LOT or JOT should file for and expect the following routings:

North of Chicago: BAE..RFD..JOT THEN DIRECT

Northwest of Chicago: RFD..JOT THEN DIRECT

West and southwest of Chicago: BDF..MOTIF..JOT THEN DIRECT

From Michigan, Northern Indiana, Ontario: OXI.V38.EON..JOT THEN DIRECT

Other areas east and south of Chicago: MACES..BVT.V7.ZORRO..EON..JOT THEN DIRECT

All other Chicago area airports, file over normal Chicago STAR arrival routes.

IFR DEPARTURES

Please file your IFR flight plan two hours before you wish to depart. Your proposed departure time should be the time you expect to depart, not two hours prior. Due to the expected high volume of filings and the necessity to ensure the preferential routes are incorporated into your flight plan, extra time will be required to process your flight plan. Do not file multiple flight plans. Departure flight plans will be valid from ½ hour before to 2 hours after your proposed departure time.

To update your proposed departure time:
After LOT Tower hours, call Chicago TRACON at (847) 289−0926.

VFR departure for airborne pick up of IFR clearance may not be accepted within 100 miles of the Joliet (JOT) VOR. Attempts to air file an IFR flight plan with Chicago or Indianapolis Center will be referred to the appropriate AFSS.

Traffic departing from all Chicago metropolitan airports should file and expect initial routings over those navaids or fixes depicted in the O'Hare–2 departure procedure (ORD8–ORD). NOTE – eastbound aircraft filed over EBAKE, DUFEE, MOBLE, GIJ or ELX will be taken over Lake Michigan. If you do not want to fly over water, file over EON, direct OXI and make a notation of "NO OVER WATER" in the remarks of the flight plan.

The following are preferred routes for JET AIRCRAFT from the Chicago area airports to the Indianapolis, Raleigh/Durham, Charlotte and other southerly USA areas:

JETS to:	VIA:
CLT	ELANR4.EMEGE..FLM..TAFTT.PARQR2.

Jets	EON..DNV..TTH..PXV.. then desired route
Props	RBS..TTH..IIU…then desired route

OBTAINING YOUR IFR CLEARANCE

IFR DEPARTURES from Chicago area uncontrolled airports: Although you may contact Lockheed Martin AFSS for clearance, it is recommended that you contact CHICAGO TRACON directly at (847) 289–0926 or (847) 289–1326. Expect a five (5) minute window for your IFR departure release. Peak departure times are expected Saturday evening and Sunday afternoon. Departures from IKK Airport should contact ZAU ARTCC on 132.5 first, if not available then contact Lockheed Martin AFSS on the airport via 122.2 or on RCO frequencies published in the East Central U.S. Airport/Facility Directory.

VFR ARRIVALS/DEPARTURES

Due to the anticipated increased volume of traffic, en route aircraft desiring to traverse the Chicago Metropolitan area should plan routes outside of the Chicago Class B and Midway Class C airspace. The appropriate frequencies for advisories are published on the Chicago VFR Terminal Area Chart. Advisories will be provided by Chicago TRACON or Midway Approach on a workload permitting basis WITHIN THE CHICAGO METROPOLITAN AREA ONLY. Chicago Center may not provide VFR advisories or flight following within 100 miles of the Joliet area. VFR aircraft are to cancel/activate VFR flight plans with Lockheed Martin AFSS. A variety of VOR and RCO frequencies are available according to location. Check the East Central U.S. Airport/Facility Directory, Chicago Sectional or Chicago Terminal Area Chart for the appropriate frequencies. The Lockheed Martin AFSS serves the Illinois portion of the Chicago metropolitan area and can be contacted from all Chicago/suburban area codes at 1–800–WX–BRIEF.

LEWIS UNIVERSITY AIRPORT TEMPORARY CONTROL TOWER
LEWIS AIRPORT TRAFFIC AREA

Check current NOTAM's for updated information on Lewis Temporary Tower.

The Federal Aviation Administration will operate a temporary control tower at Romeoville Lewis University (LOT) Airport. The Lewis Airport Traffic Area will be in effect during times that the control tower is open. The control tower will be open during the following dates and times:

DATE	DAY	TIME (CDT)	TIME (UTC)
Sept 14	Thursday	0800–2300	1300–0400
Sept 15	Friday	0800–2300	1300–0400
Sept 16	Saturday	0800–2300	1300–0400
Sept 17	Sunday	0800–2300	1300–0400
ALTERNATE RACE DAY			
Sept 18	Monday	0800–2300	1300–0400

LEWIS AIRPORT TRAFFIC AREA

ROMEOVILLE/LEWIS UNIVERSITY AIRPORT – 41°36°26.1" N / 88°05°46.4" W

The LEWIS AIRPORT TRAFFIC AREA is defined as that airspace extending upward from the surface to 3,200 feet MSL within a 4.0 nautical mile radius of the Romeoville/Lewis University Airport. This LEWIS AIRPORT TRAFFIC AREA is effective during the specific dates and times that the temporary control tower is open as listed within this NOTAM.

Requirements:

- Two–way radio.
- All aircraft monitor ATIS (Frequency 124.275).
- IFR aircraft please obtain ATIS information prior to communications transfer to Chicago Approach south of JOT VOR or EON VOR.
- VFR aircraft are to contact Lewis Tower (Frequency 127.825) prior to entry into the LEWIS AIRPORT TRAFFIC AREA, IFR aircraft as directed by Chicago Approach. Refer to the graphic within this NOTAM for VFR recommended reporting points.

Follow ATC instructions for entry into the pattern and sequencing; normal pattern altitudes apply. Expect helicopter operations departing southeast from the airport, arriving southeast to the airport; **the helicopter landing area is in the grass east of TWY C and south of TWY B** (See airport layout herein and helicopter operators refer to helicopter procedures within this NOTAM).

All pilots parking at Lewis Airport should obtain an information sheet from ground handlers or other airport personnel. This information sheet will explain how to obtain fuel, how to get to your aircraft upon your return, and VFR/IFR departure procedures.

Special departure procedures will be in effect upon completion of the NASCAR races SATURDAY and SUNDAY. Specific times cannot be predetermined and a large number of departures are expected. ATIS will identify when the special departure procedures are in effect. The following page defines the special departure procedures.

LEWIS AIRPORT TEMPORARY TOWER SPECIAL DEPARTURE PROCEDURES AFTERNOON OF FRIDAY AND SATURDAY ONLY

Check current NOTAM's for updated information on Lewis Temporary Tower.

VFR DEPARTURES – TAXI AND TOWER PROCEDURES

When preparing to taxi, monitor ATIS for updated information. Refer to the information sheet obtained from the ground crew when you landed or the LEWIS AIRPORT OUTBOUND TAXI INSTRUCTIONS graphic within this NOTAM.

- **MONITOR ground control (Frequency 121.600) as you taxi to the appropriate stop sign** prior to taxiway A, B or G according to where you were parked.
- Stop at the stop sign and continue to **MONITOR** ground control.
- Ground control will initiate contact with aircraft according to where they are stopped – example – "First aircraft on taxiway Delta, state call sign and intentions".
- Advise ground control of:
  1. Call sign;
  2. ATIS code;
  3. Type aircraft;
  4. That you are VFR, and;
  5. Direction of flight.
- Follow ground control instructions for sequencing with other taxiing aircraft.
- **Continue to monitor ground until advised to MONITOR tower frequency (127.825).**
- Tower will initiate contact.
- Acknowledge and follow Tower instructions for take–off clearance and departing the pattern.
- Monitor Tower frequency for further traffic instructions until you have departed the LEWIS AIRPORT TRAFFIC AREA.
- **Report when clear of the LEWIS AIRPORT TRAFFIC AREA and leaving the tower frequency.**

VFR aircraft desiring flight following may initiate contact on the appropriate advisory frequency upon leaving the LEWIS AIRPORT TRAFFIC AREA. Advisories will be provided by Chicago TRACON or Midway Approach on a workload permitting basis WITHIN THE CHICAGO METROPOLITAN AREA ONLY. Chicago Center may NOT provide VFR advisories or flight following within 100 miles of the Joliet area. Plan on routes that remain clear of Chicago Class B and Midway Class C airspace. DO NOT plan on receiving Class B clearance. Establishment of radio contact and/or issuance of a transponder code for advisories is NOT a clearance to enter Class B airspace. Contact with Chicago Approach Control is NOT

the appropriate facility for entry into the Midway Class C airspace. Refer to the Chicago VFR Terminal Area Chart for advisory frequencies. VFR flight plans may be opened through Lockheed Martin AFSS on JOT RCO frequency 122.5 or through various VOR frequencies. Refer to the Chicago Sectional or Chicago VFR Terminal Area Chart for VOR frequencies to Lockheed Martin AFSS.

VFR DEPARTURE FOR AIRBORNE PICK UP OF AN IFR CLEARANCE MAY NOT BE ACCEPTED WITHIN 100 MILES OF THE JOLIET (JOT) VOR.

IFR DEPARTURES – TAXI AND TOWER PROCEDURES

ON SUNDAY ALL IFR DEPARTURES MUST OBTAIN THEIR IFR CLEARANCE FROM CLEARANCE DELIVERY (FREQUENCY 118.075)

IF YOU DO NOT OBTAIN YOUR IFR CLEARANCE PRIOR TO STARTING YOUR TAXI, YOU WILL BE DIRECTED TO A PARKING AREA.

When preparing to taxi:

- Monitor ATIS for updated information.
- Refer to the information sheet obtained from the ground crew when you landed or the LEWIS AIRPORT OUTBOUND TAXI INSTRUCTIONS graphic within this NOTAM.
- **MONITOR ground control as you taxi to the appropriate stop sign prior to taxiway B or G according to where you were parked.**
- Stop at the stop sign and continue to MONITOR ground control.
- Ground control will initiate contact with aircraft according to where they are stopped – example – "First aircraft on taxiway Delta, state call sign and intentions".
- Advise ground control of:
    1. Call sign;
    2. ATIS code;
    3. That you are IFR to (destination)
    4. Beacon code assignment.

Stating the beacon code is a crosscheck to ensure you have the correct flight plan clearance. An incorrect beacon code will result in your being directed into an inbound taxiway where you will have to contact clearance delivery and obtain the correct flight plan clearance.

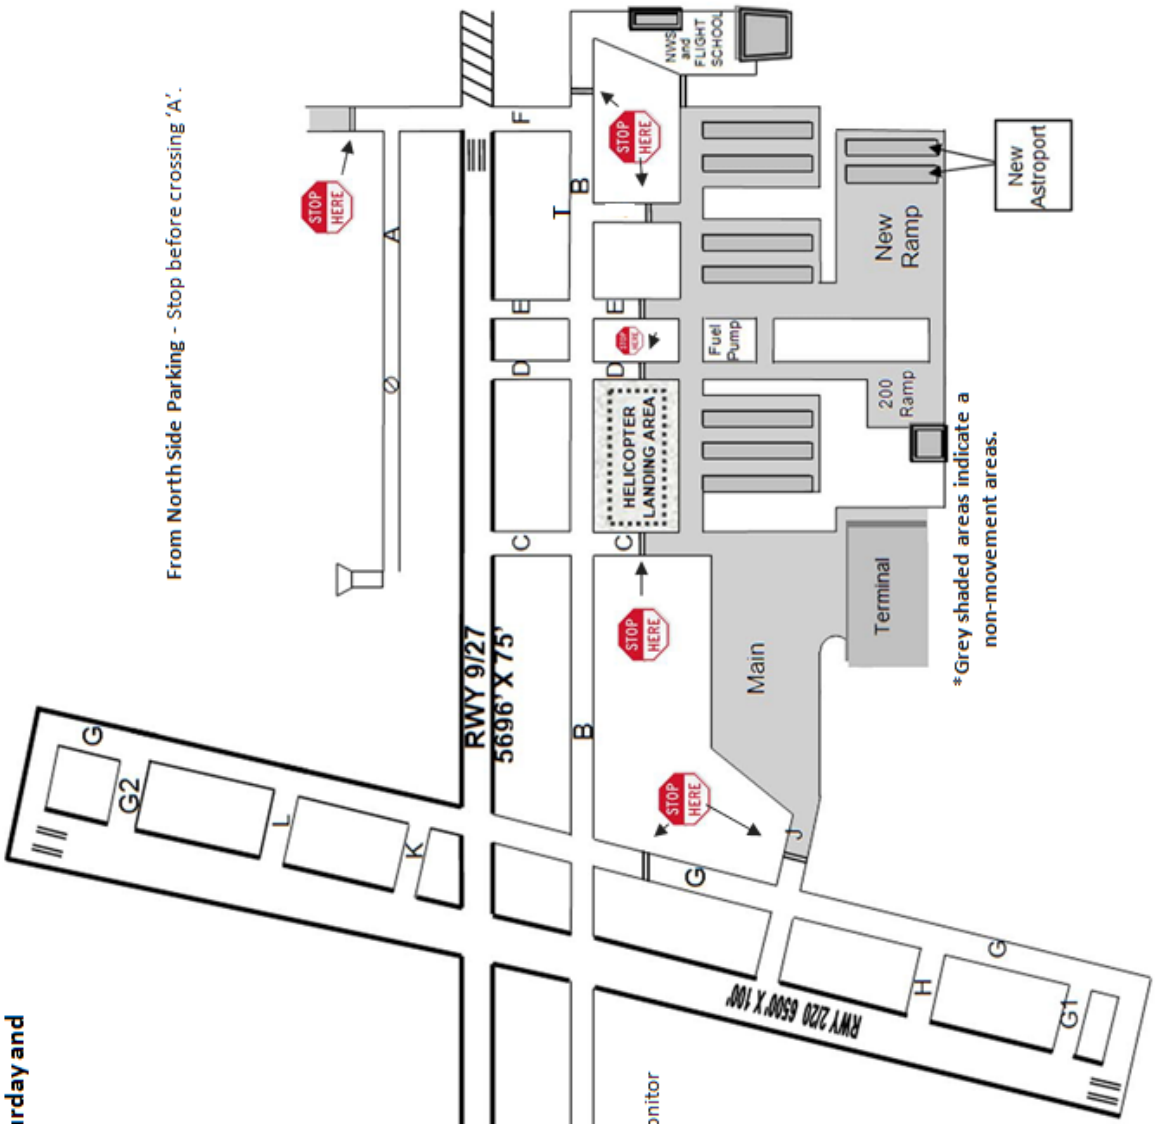

Follow ground control instructions for sequencing with other taxiing aircraft. **Continue to monitor ground until advised to MONITOR tower frequency.** Tower will initiate contact. Acknowledge and follow Tower instructions for take–off clearance and departure heading. Tower will advise when to change to Chicago Departure control.

Lewis Airport Outbound Taxi Instructions Saturday and Sunday after the races.

Monitor Ground as you taxi to Stop Sign STOP before entering Taxiways 'A' or 'B'.

From 'T' Hangers -

Taxi from parking via Taxiways 'D' or 'T' to the Stop Sign. Do not taxi out on 'E' or 'C'. These are reserved for inbounds.

MAIN RAMP - Aircraft will exit the ramp via J/G or C. Monitor ATIS to determine which taxiway to use.

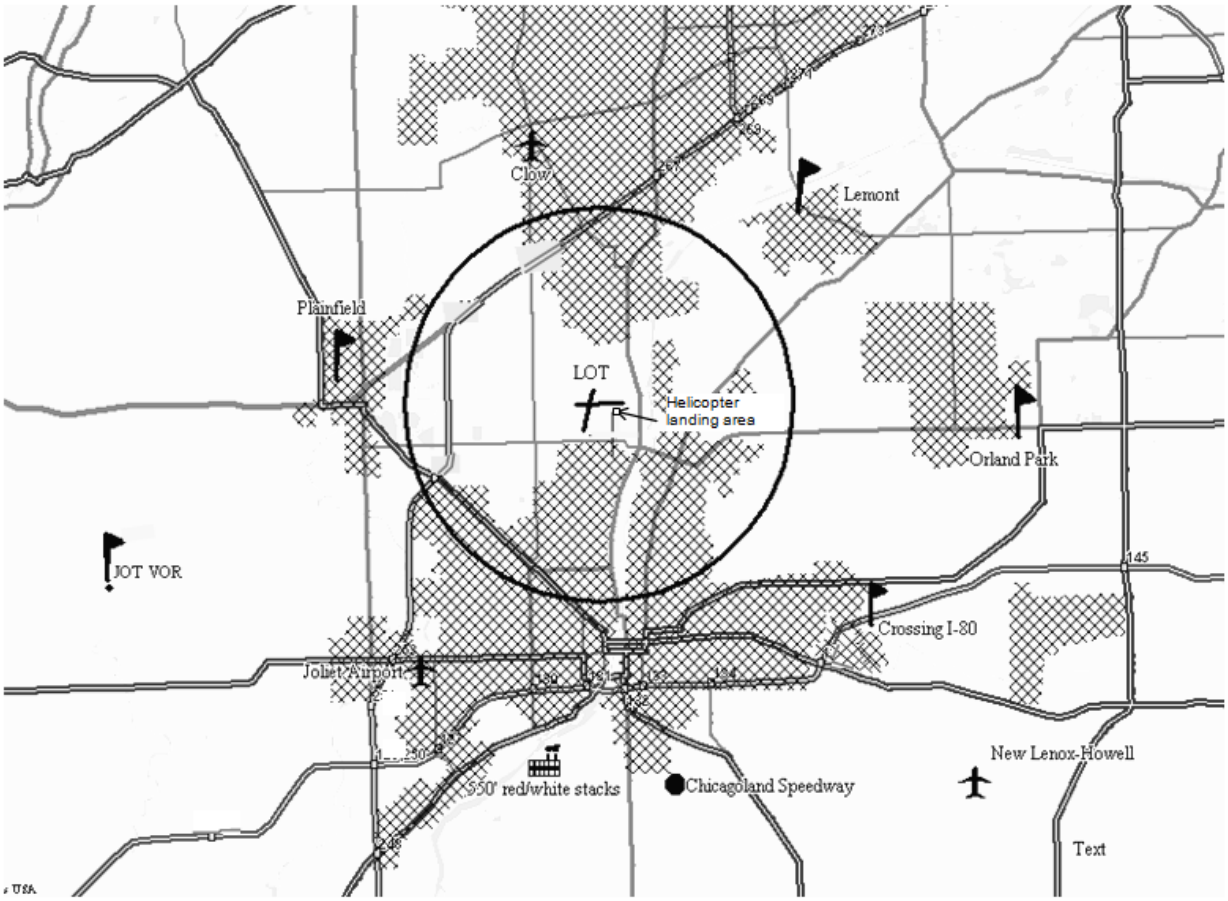

ATIS frequency is 124.275 Monitor Ground Control on frequency 121.600 as you taxi to and STOP at the Stop Signs. Ground Control will call you - Example: "First aircraft at Taxiway T state call sign and intentions".

If VFR - 1) State Call Sign. 2) ATIS Code. 3) Type aircraft. 4) That you are VFR and 5) Direction of flight.

If IFR - 1) State Call Sign. 2) ATIS Code. 3) That you are IFR to (destination airport) and 4) Assigned beacon code.

Follow Ground Control instructions for sequencing of departure aircraft. Monitor Ground until instructed to monitor Tower.

Lewis Airport Traffic Area, Frequencies and VFR Reporting Points

Lewis Airport Traffic Area is a 4.0 NM radius from the LOT Airport, up to and including 3,200¿ MSL. The Lewis Airport Traffic Area is in effect when Lewis Tower is open.

Expect numerous arrivals Friday, Saturday and Sunday morning. Expect numerous departures Friday night, Saturday and Sunday evening.

Expect helicopters operating 200' south of the RY 9/27 and 500' east of RY 2/20.

Lewis ATIS frequency– **124.275**

Lewis Tower frequency– **127.825**

Lewis Ground frequency– **121.600**

Lewis Clearance Delivery– **118.075**

Lewis AWOS frequency– **118.525**

Lewis Airport UNICOM – **122.80**

LEWIS UNIVERSITY AIRPORT TEMPORARY CONTROL TOWER AND LEWIS AIRPORT TRAFFIC AREA

HELICOPTER PROCEDURES

Check current NOTAM's for updated information on Lewis Temporary Tower.

Lewis University Airport has identified a helicopter landing area northeast of the main ramp, **in the grass east of TWY C and south of TWY B**. Helicopters operating within the Lewis Airport Traffic Area airspace will be expected to comply with normal ATC communication requirements. This may have a significant impact on helicopter operations should weather within the Lewis Airport Traffic Area be IFR. Non−radar separation standards require a one in−one out protocol under IFR conditions with IFR aircraft given a higher priority over SVFR operations.

CAUTION – THERE ARE OVER 5 OBSTRUCTIONS (TOWERS, SMOKE STACKS, PERMANENT CRANES) WITHIN 2 MILES OF THE AIRPORT THAT EXCEED 250' AGL, SOME AS HIGH AS 500'.

Helicopter operations between LOT and the Chicagoland Speedway are to follow the routing identified on the graphic depiction in this NOTAM.

WARNING – UNDER NO CIRCUMSTANCES SHOULD HELICOPTERS OPERATE IN THE VICINITY OF THE STATE PRISON, LOCATED LESS THAN ONE MILE SOUTH OF THE AIRPORT. HELICOPTERS THAT DEVIATE FROM THIS ROUTE OR OTHERWISE STRAY TOO CLOSE TO THE PRISON MAY BE APPROACHED BY POLICE RESULTING IN PASSENGERS AND CREW BEING DETAINED BY DEPARTMENT OF CORRECTIONS OFFICERS. EXCEPT IN AN EMERGENCY THE CONTROL TOWER WILL NOT ISSUE ANY INSTRUCTIONS THAT MAY CAUSE HELICOPTERS TO OPERATE TOO CLOSE TO THE PRISON.

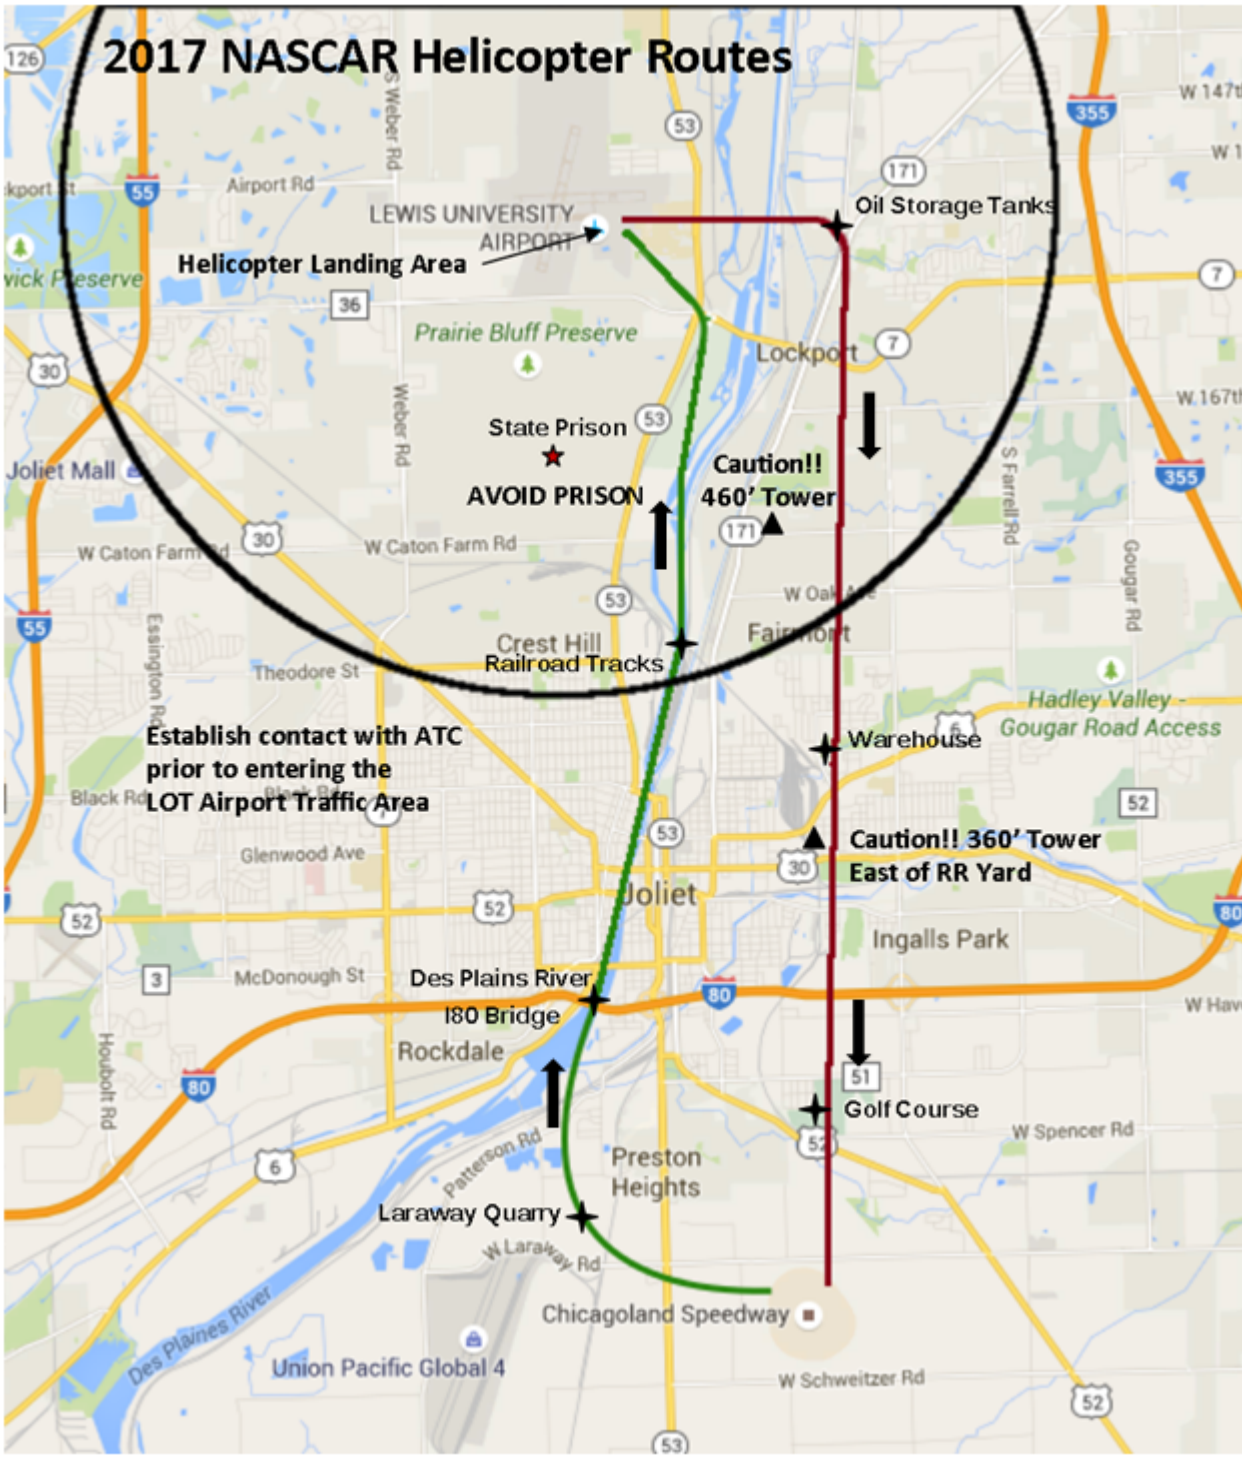

Pilots should check NOTAMs daily for changes and TFR information.

Use extreme caution when landing or departing the helicopter landing area. **There will be people loading and unloading in your landing area. The alleyway to the south of the helicopter landing area is the hot refueling area for quick turn fixed wing aircraft. If you need to hover while waiting for the landing area to clear, hover over the grass area bounded by TWY G, TWY B, TWY C and the Main Terminal Apron. Do not hover over or park the Main Terminal Apron.**

The traffic pattern for the helicopter landing area is:

- **Landing from the East/Southeast**
- **Departing to the East.**

LEWIS AIRPORT HELICOPTER ROUTE TO CHICAGOLAND SPEEDWAY

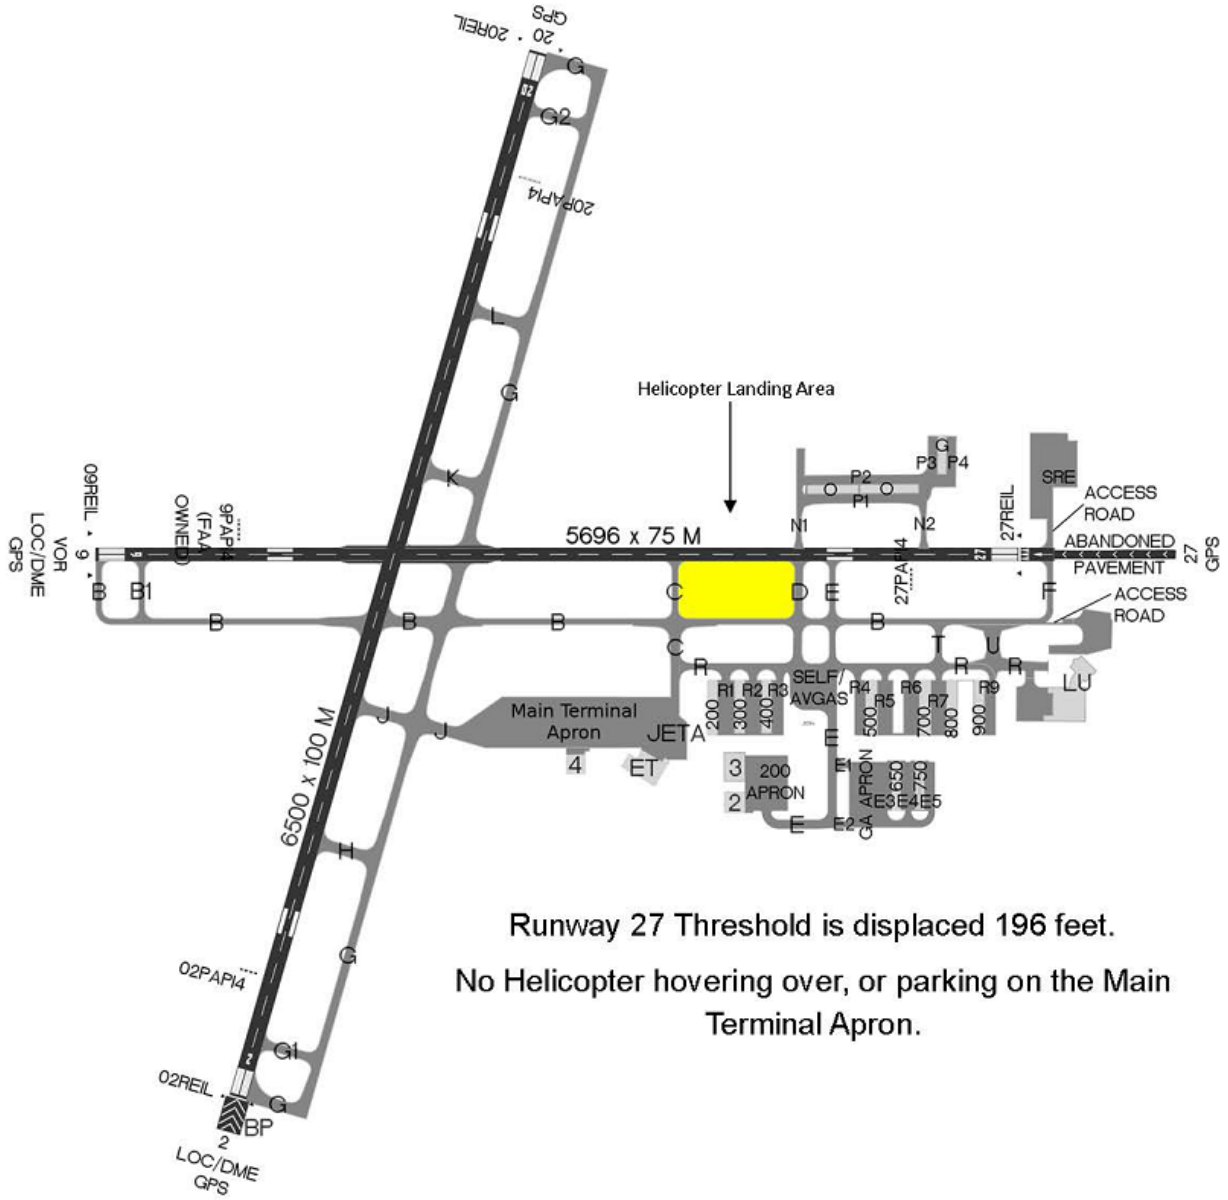

DEPART LOT Outbound Speedway–Fly East across the Des Plaines River to the Oil Storage Tanks (41°36'36"N / 88°02'56"W), fly South remaining East of the train tracks to the Railroad Yard (41°32'15"N / 88°03'30"W), continue South over Warehouse and Golf Course (41°29'55"N / 88°03'15"W), approach speedway landing area from the North.

Use common reporting frequency of 123.025 over race track.

DEPART SPEEDWAY Inbound to LOT– Fly West approximately 1NM then Northwest toward Laraway Quarry (41°29’11”N / 88°05’31”W) remaining West of the quarry, fly North to the Des Plaines River & I–80 Bridge intersection (41°30’42”N / 88°05’29”W) from there fly the Des Plaines River Northbound (remain West of the tracks at all times) until North of the state prison then turn Northwest to the LOT landing area.

NOTICE – ATC will not issue instructions contrary to this route which may place helicopter traffic closer to the prison. Helicopters that deviate from this route and fly closer to the prison than depicted may be detained by Department of Corrections officers.

ALABAMA 500
MONSTER ENERGY NASCAR EVENT

TALLADEGA, ALABAMA
October 12 – 15, 2017

SPECIAL AIR TRAFFIC PROCEDURES

Due to the large number of aircraft operating to and from the Talladega, Alabama area in conjunction with this event, Special Air Traffic Procedures to enhance safety and minimize delays will be in effect for the following airports.

AIRPORT	IDENTIFIER
Talladega Municipal	KASN
Anniston Regional	KANB
St. Clair County Airport	KPLR

TRAFFIC MANAGEMENT INITIATIVES

The Federal Aviation Administration (FAA) Air Traffic Control Systems Command Center (ATCSCC) may apply traffic management initiatives when arrivals are expected to exceed airport capacity. Expect Departure Clearance Times (EDCT) may be issued for all domestic, IFR arrivals.

Aircraft issued an EDCT will be expected to depart within 5 minutes of the assigned time. Aircraft unable to depart within 5 minutes of their EDCT shall advise ATC and request a new EDCT assignment.

The program may be in effect **October 15, 2017, 0800–1400 CDT (1300–1900 UTC)**

Traffic management initiatives are designed to provide equitable airspace access. To maintain program integrity and minimize delays, airborne changes of destination will not be accepted, except in emergency situations. Duplicate flight plans (same call sign/multiple times) may be removed from the system.

TEMPORARY CONTROL TOWER

The FAA will operate a temporary control tower at KASN as follows:

DAY	DATE	TIME (CDT)	TIME (UTC)
Saturday	October 14, 2017	1000 – 1800	1500 – 2300
Sunday	October 15, 2017	0600 – 1900	1100 – 0000

FREQUENCIES / TELEPHONE

KASN TOWER	
Tower	119.075
Ground Control	121.7
Clearance Delivery	125.275

KASN AWOS	118.425 or (256) 362–5847
ATIS	134.05

KANB & AFSS	
KANB CTAF	123.6
KANB Clearance Delivery	124.55
KANB ASOS	119.675 or (256) 835–3931
En Route Weather (Airborne)	122.2

ARRIVAL PROCEDURES

MONITOR ATIS on 134.05. Enter the traffic pattern with lights on and gear down. Maintain a pattern as close to the airport boundary as safety will allow. Be alert for specific landing point and runway exit instructions. Expeditious compliance is expected. After exiting the runway, airport personnel will direct you to parking. There is a limited amount of paved parking and you may be directed to parking in grassy areas. Prompt compliance with airport ground crew directions is expected to keep the runway clear of traffic.

CAUTION: Use extreme caution when entering the area around the Talladega Airport due to limited radar coverage, high minimum vectoring altitude (4,000 feet) and mountainous terrain in the KASN area.

VFR ARRIVALS

(Effective during hours of temporary tower operation)

Two–way radio is required. MONITOR Talladega Tower frequency and contact the tower no earlier than 10 miles from the airport. Keep transmissions brief to reduce frequency congestion. Except for landing or takeoff, no aircraft will be permitted to operate within five miles of the Talladega Municipal Airport below 2,500 feet. Unless otherwise directed by the Tower, all traffic pattern entries should be made via a standard downwind entry. A left–hand pattern will be used for Runway 22 and a right hand pattern for Runway 04.

IFR ARRIVALS

There is LIMITED radar coverage in the Talladega area. To minimize delays and make the best use of the radar coverage west of Talladega, expect a visual approach if weather permits, or a VOR–A approach if weather requires. Expect radar vectors at or above 4000 to remain in radar coverage. Due to non–radar separation requirements below 4000, expect holding at or above 4000 until approach clearance can be issued. If an instrument approach is required, aircraft will be cleared for a straight–in only approach to expedite traffic flow.

NOTE: IFR arrivals on October 15th from 1600–2000 CDT (2100–0100 UTC) may expect a **2–3 hour delay** due to KASN/KANB departure traffic. Pilots should plan to arrive before 1600 CDT or after 2000 CDT.

PREFERRED IFR ARRIVAL ROUTES / ALTITUDES

Arrivals from the following airports file **AT OR BELOW FL220** via:

HKY / SVH:

AIRCRAFT	ROUTE
JET	BZM SPA AHN ATL TDG
PROP	BZM SUG HRS GQO GAD TDG

CLT

AIRCRAFT	ROUTE
JET (RNAV)	ESTRR3 IPTAY CHOPZ ATL TDG

Aircraft between GRD and ODF departing airports not listed above expect:
(AOA 15,000) AHN ATL TDG destination
(AOB 14,000) routing around Atlanta Approach airspace

RNAV aircraft north of the KASN area expect:
RQZ VUZ TDG DEST

DEPARTURE PROCEDURES

Due to their close proximity and limited radar coverage, KASN, KANB, and KPLR are considered one airport for departure clearances purposes.

MONITOR ATIS on 134.05 prior to engine start to determine the runway in use and applicable procedure.

Adherence to departure procedures is required to reduce frequency congestion and provide ATC a method of sequencing and spacing. It is critical that pilots only monitor the correct frequency.

IFR aircraft departing **after** the race on Sunday, October 15th **prior** to 2000 CDT, are asked to file flight plans with a **1615 CDT (2115Z)** proposed departure time to ensure flight plan delivery to the temporary tower and reduce departure delays. Atlanta ARTC Center will ensure flight plans with a 2115 UTC departure time remain in the system until 0115 UTC (October 16, 2017).

NOTE: IFR clearances may be obtained at the FBO thirty minutes prior to the filed proposed departure time. Users are encouraged to obtain clearance at the FBO to reduce frequency congestion and expedite the overall departure process.

RUNWAY 22 TAXI PROCEDURE

- Aircraft parked in the grass between the airport and the racetrack, taxi to the STOP sign located between taxiways A2 and A3 via the designated taxi route. (See Airport Diagrams). Once number one at the STOP sign, call ground control on 121.7.
- Aircraft parked on the ramp adjacent to the FBO may taxi via either "A2" or "A1" to the stop signs short of "Alpha." Once number one at the STOP sign, call ground control on 121.7.
- IFR aircraft that have NOT received clearance from the FBO call clearance delivery on 125.275 prior to reaching the STOP sign
- On initial contact advise ground control of call sign, type aircraft, assigned beacon code (if IFR), direction of departure (if VFR), and ATIS code. **If you received your IFR clearance in the FBO, state "IFR, <u>with clearance</u>, beacon code _ _ _ _".**
- Do not pass the STOP sign until instructed by ground control. Taxi as instructed.
- All aircraft MONITOR – do not call – tower on 119.075 after receiving taxi instructions.
- Tower will consider aircraft ready for departure when number 1 for assigned runway.

RUNWAY 4 TAXI PROCEDURE

- All aircraft taxi to and hold short of Alpha taxiway. Stop signs will be located at A1, A2, A3, and A4. (See Airport diagrams). Once number one at the STOP sign, call ground control on 121.7.

- IFR aircraft that have NOT received clearance from the FBO call clearance delivery on 125.275 prior to reaching the STOP sign.
- On initial contact advise ground control of call sign, type aircraft, assigned beacon code (if IFR), direction of departure (if VFR), and ATIS code. **If you received your IFR clearance in the FBO, state "IFR, with clearance, beacon code _ _ _ _".**
- Do not enter Alpha taxiway or pass the STOP signs until instructed by ground control. Taxi as instructed.
- All aircraft MONITOR – do not call – tower on 119.075 after receiving taxi instructions.
- Tower will consider aircraft ready for departure when number 1 for assigned runway.

PREFERRED IFR DEPARTURE ROUTES
(Effective Sunday, October 15, 2017)

NOTE: Due to traffic volume and complexity, pilots may anticipate reroutes and altitude assignments to allow orderly departures from the effected airports. This may be especially relevant for aircraft landing in the Charlotte terminal area. Eastbound aircraft may expect initial routing via the TDG 110 radial or the TDG 065 radial as traffic dictates. Check current NOTAM's for possible changes to effective dates / times.

Departures to the following destinations file via:

DESTINATION (Aircraft)	**ROUTE**
JQF / RUQ (non–RNAV) Props	ATL UNARM5
JQF / RUQ (non–RNAV) Jets	ATL CHPTR2
CLT (non–RNAV) Props	ATL UNARM5
CLT (non–RNAV) Jets	ATL CHPTR2
CLT (RNAV)	BESTT JONZE2
HKY / SVH	GAD GQO VXV BZM
GSO / INT (RNAV)	GAD GQO VXV DUGLY TRAKS TRAKS2
GSO / INT (non–RNAV)	GAD GQO VXV GZG BROOK3
EXX / MTV / TRI / VJI	GAD GQO VXV BZM
Destinations north of line from RQZ to BKW *Examples–(**not a complete listing** of airports) 07C, 3I3, BMG, ENW, HNB, UMP, SDF, JVY, OEB, RID, PTK, LUK, LEX, HTS, PBX*	WAMPM RQZ

Note: Dependent upon traffic and weather conditions at KJQF on October 15, 2017, users may receive a routing over: ATL IRQ CAE FLO KABEE KABEE2 KJQF. Aircraft can expect to cross IRQ at or below FL230.

KANB IFR DEPARTURES

Aircraft departing KANB must request a clearance through Anniston Clearance Delivery on 124.55.

Expect the same route procedures as aircraft departing KASN. Due to the close proximity of KANB, KASN, and KPLR, these airports are treated as one for the purposes of issuing an IFR departure clearance. After 1800 CDT (2300z), contact Birmingham Approach Control on Ground – 125.45.

VFR /IFR PICKUP PROCEDURES

(KASN/KANB/KPLR departures)

Due to the high volume of traffic in the Talladega area, follow these procedures unless an emergency situation exists:

DO NOT request IFR pickup below 5,000 feet MSL, due to radar coverage. If ceilings are below 5,000, you should depart IFR. Use caution for mountainous terrain.

DO NOT call Birmingham Approach until at least 15 miles from KASN. DO NOT call any Atlanta Center frequency until at least 20 miles east of KASN, or above 10,000 feet if westbound.

CAUTION: remain clear of the Atlanta Class B airspace. IFR pickup within 40 NM of ATL will be extremely limited due to the volume of arrivals into Hartsfield–Jackson.

Squawk 1200 on departure.

If planning an IFR pick–up, ensure that an IFR flight plan is on file with Flight Service.

IFR air–filed clearances will not be accepted within 100 miles of KASN except in emergency situations.

AFTER DEPARTURE

Aircraft <u>AT OR BELOW</u> 10,000

BETWEEN	FACILITY	FREQUENCY
TDG 328 radial – – – 110 radial	ATLANTA CENTER	124.5

TDG 111 radial – – – 190 radial	ATLANTA CENTER	120.45
TDG 191 radial – – – 260 radial	ATLANTA CENTER	132.25

TEMPORARY FLIGHT RESTRICTION

A Temporary Flight Restrictions (TFR) will be in effect for this event. See **FDC NOTAM 4/3621** for details.

GENERAL INFORMATION

Use caution for all types of traffic operating in the area including banner tows, helicopters, and blimps.

CAUTION: Pilots are requested to avoid flight at and below 5000 FT AGL in the National Security Area (NSA) northeast of Talladega.

Pilots should ensure they receive a thorough briefing on all NOTAMS in the vicinity of Talladega.

TALLADEGA MUNICIPAL AIRPORT (KASN)

Parking Information

The Talladega Airport has implemented a parking reservation program. All aircraft are requested to arrange for a parking slot prior to landing from October 12, 2017 through October 15, 2017. Parking fees are: jets $300, twins $200 and singles $100. Parking reservations may be obtained by calling the Talladega Municipal Airport at 256−761−4815 weekdays between the hours of 0800−1600 CDT.

LEIDOS FLIGHT SERVICES

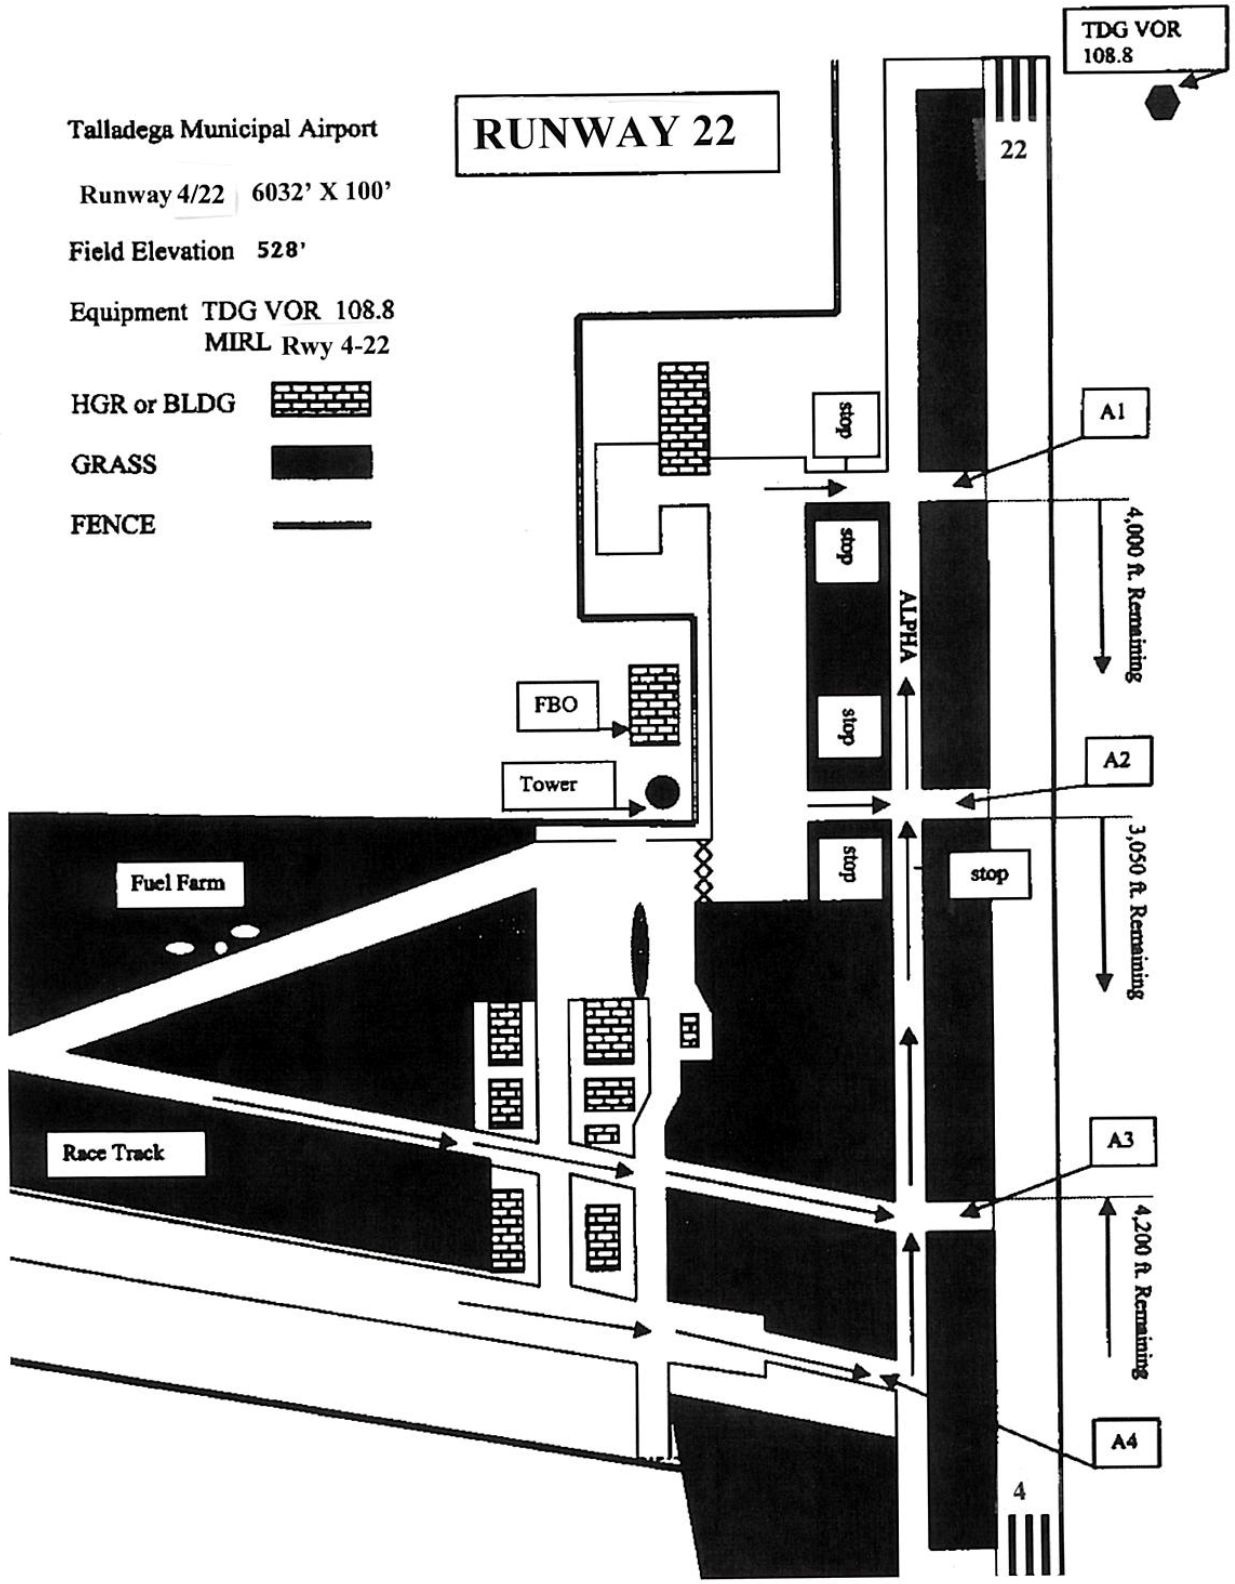

Pilot briefing and flight planning services are available online through the Leidos Pilot Portal at https://www.1800wxbrief.com/Website/ or by telephone at 1−800−WX−BRIEF (1−800−992−7433). Press 1 or say “Briefer”, then press 2−5−2 or say “Alabama”

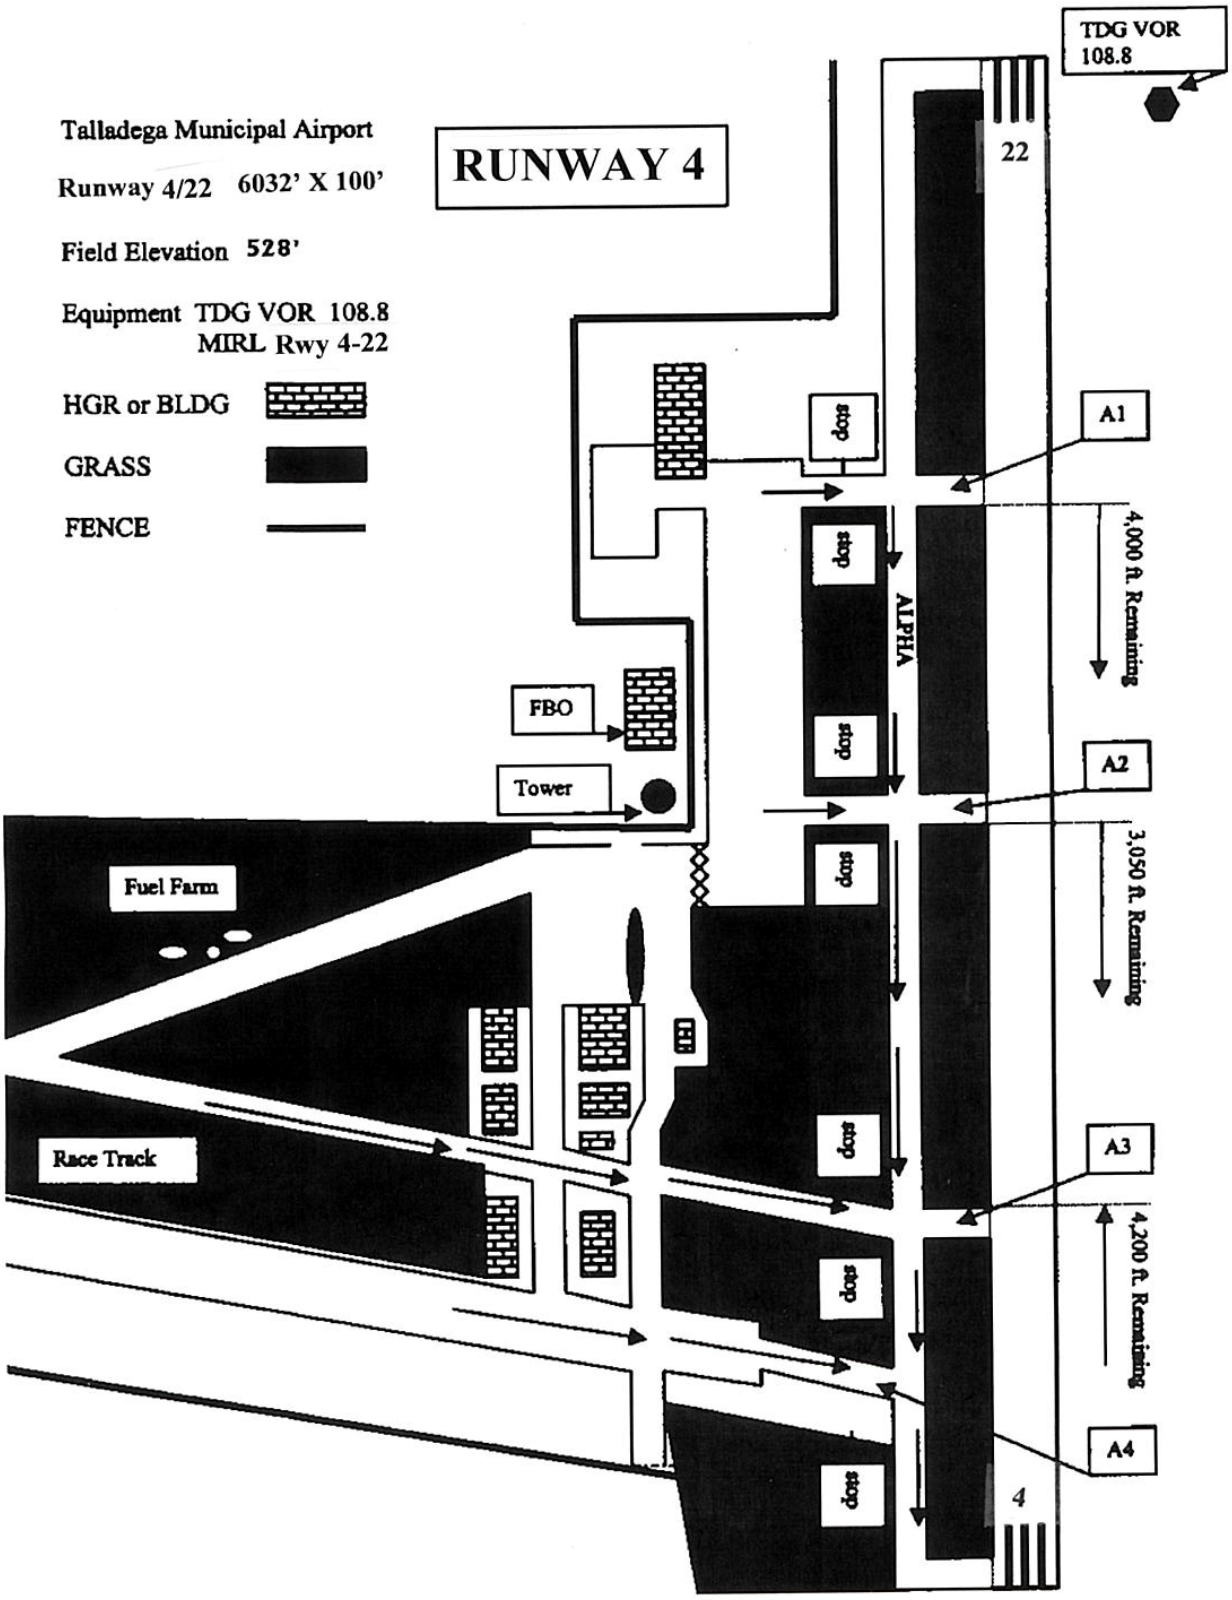

Contact Anniston Radio on 122.2 in the Talladega, Alabama area for VFR flight plan activation and closure. Contact Flight Service on the following frequencies for in−flight briefing services:

Direction from Talladega, Alabama

North	122.2 / 122.3 MHz
East	122.2 / 122.6 MHz
West	123.65 MHz
South	122.55 MHz
Northwest	122.6 MHz

In−flight pilot reports are encouraged on these frequencies.

KANSAS SPEEDWAY

NASCAR CUP SERIES

EASTERN KANSAS and WESTERN MISSOURI
October 22, 2017

SPECIAL AIR TRAFFIC PROCEDURES

In anticipation of increased air traffic in the Kansas City, Missouri metropolitan area during the Kansas Speedway Sprint Cup NASCAR event, the following procedures will be used to enhance safety and minimize air traffic delays.

FLIGHT PLANS

Please file your flight plan early. Extra time may be required to process your flight plan due to a large volume of expected filings and the necessity to ensure that preferential routes are incorporated into your flight plan. Do not file multiple flight plans. Departure flight plans will be valid from 1/2 hour before to 2 hours after your proposed departure time. Due to anticipated frequency congestion, Kansas City Center and Kansas City Approach Control, **except for emergency situations,** will not accept air–filed flight plans to or from the Kansas City area from Wednesday, October 18 through Sunday, October 22, 2017. Airborne–filed flight plans from other facilities may experience delays.

VFR DEPARTURES / IFR PICKUP

Due to the high volume of traffic, controller workload, and mile–in–trail requirements, pilots should avoid departing VFR and requesting airborne activation of an IFR flight plan.

VFR AIRCRAFT

Due to the anticipated increased volume of traffic, en route aircraft desiring to traverse the Kansas City metropolitan area should plan routes outside of the Kansas City Class B airspace. The appropriate frequencies for advisories are published on the Kansas City VFR Terminal Area Chart. Advisories will be provided by Kansas City Approach Control on a workload permitting basis.

Note: This is a very congested airspace. Issuance of a transponder code is not a clearance to enter Class B airspace. Please wait for identification and specific clearance from the controller prior to entering Class B airspace. Class B Clearance is required 3,000 MSL and above over the Kansas Speedway area.

VFR aircraft are encouraged to cancel/activate flight plans with Leidos Flight Service when approaching or departing the Kansas City area. Flight Service can be reached on one of the frequencies listed below or by phone at (800) WX–BRIEF or (800) 992–7433.

FLIGHT SERVICE FREQUENCIES

122.3 MHz Transmit/Receive (NORTH)

122.25 MHz Transmit/Receive (NORTHEAST) 122.05 MHz Transmit/Receive (SOUTHEAST)

122.15 MHz Transmit/Receive (SOUTH) 122.45 MHz Transmit/Receive (WEST)

PILOTS ARE URGED TO OBTAIN A COMPLETE WEATHER BRIEFING AND TO REVIEW ALL APPLICABLE NOTAMS BEFORE CONDUCTING FLIGHT.

DEPARTURE PROCEDURES

DO NOT request IFR departure clearance prior to 20 minutes before estimated time of departure (ETD). IFR clearances shall be requested from Clearance Delivery at Kansas City International (MCI) and Kansas City Downtown (MKC) airports. Please call for clearance prior to engine start.

DO NOT call Ground Control to taxi until you are the number one aircraft that can enter a taxiway from the ramp or parking area.

DO NOT taxi until you have received taxi information and appropriate IFR clearance.

DO NOT call the Tower for a departure clearance until you are in the number one position for the runway and ready for takeoff.

ADDITIONAL PILOT INFORMATION

Pilots departing from **MCI** and **MKC** shall monitor the ATIS and call Clearance Delivery for clearances. The clearance will include a beacon code and initial altitude to be flown when released for an IFR departure. Pilots may expect gate hold procedures to be in effect.

Pilots departing New Century AirCenter (**IXD**) shall monitor Ground Control frequency and call prior to entering a taxiway.

After the race is completed, aircraft are expected to land at the destination airport for which they have filed. Aircraft that depart and then change to another destination can expect delays.

Note: *Due to the complexity and volume associated with this event, users can anticipate dynamic reroutes and altitude assignments that will allow an orderly transition of all users outbound from the following airports. This is especially relevant for aircraft landing in the Charlotte terminal area.*

PREFERRED IFR DEPARTURE ROUTES

Aircraft departing MCI, MKC, and IXD for the following destinations should file:

MCI DEPARTURES:

OVERFLIGHT TRAFFIC

Aircraft not landing in the Kansas City area are requested to avoid overflying the area below 16,000 feet MSL from the MCI 090 radial clockwise to the MCI 180 radial within 30 miles of MCI.

CAUTION

NUMEROUS AERIAL DEMONSTRATIONS

These demonstrations may include, but are not limited to, the following events: air shows which may include multiple high−performance military aircraft and skydivers, banner tows, helicopter operations, and blimp

operations. Media coverage from numerous aircraft should be anticipated in the area surrounding the Kansas Speedway. Pilots are urged to check NOTAMs if flight is to be conducted in this area on the effective dates.

Class B Clearance is required 3,000 MSL and above over the Kansas Speedway area.

2017 UNITED STATES GRAND PRIX SPECIAL AIR TRAFFIC PROCEDURES

AUSTIN, TEXAS

OCTOBER 20 – 22, 2017

In anticipation of a large number of aircraft operating in the Austin, Texas area during the United States Grand Prix Formula l Race, the following special air traffic procedures will be used to minimize air traffic delays and enhance safety:

GENERAL

Pilots are advised to keep a vigilant look out because of the high volume of helicopter traffic in the area.

VFR AUS TERMINAL AREA OPERATIONS

Class C airspace requirements apply. Contact Austin Approach Control a minimum of 10 miles from entering Class C airspace on the following frequencies: 119.0 arriving from the WEST, 127.225 arriving from the EAST, 1 20.875 arriving from the South . In order to avoid a heavy concentration of helicopter operations in the area remain above 2000' MSL until four miles on final approach. VFR arrivals can expect lengthy delays outside Austin Class C airspace during peak traffic periods. Formation flights, practice approaches, touch and go operations are prohibited within the Austin terminal area. VFR advisory service within the Austin terminal area will be on a workload–permitting basis. Class C violators will be aggressively pursued.

AUSTIN AREA AIRPORTS

AUSTIN–BERGSTROM INTERNATIONAL AIRPORT (KAUS)

KAUS Airport Authority may institute a parking reservation requirement for the events leading up to and including the 2017 United States Grand Prix Race. Contact the FBO to obtain your parking reservation. The FAA Airport Traffic Control Tower/Approach Control at KAUS is operational 24 hours a day.

FREQUENCIES:

KAUS ATCT – (Radio Call "AUSTIN TOWER")	121.0
KAUS Ground Control	121.9
KAUS Clearance Delivery	125.5
KAUS ATIS	124.4
KAUS HELICOPTER ONLY – (AUS TOWER)	119.85

SAN MARCOS AIRPORT (KHYI)

Contact local FBOs for parking reservations.
KHYI Contract Airport Traffic Control Tower operational hours: 0700–1900 LOCAL TIME
(1200–0000 UTC)

FREQUENCIES:

KHYI ATCT – (Radio Call ”SAN MARCOS TOWER”)	1 26.825

KGTU ATIS	118.6
KGTU ATIS/AWOS	119.375

AFSS

San Angelo Flight Service	122.55

ARRIVALS

IFR ARRIVALS

IFR arrivals should expect sequencing to a standard instrument approach or straight in visual approach. Do not cancel IFR in an attempt to obtain more expedited handling.

In order to avoid a heavy concentration of helicopter operations in the area remain at or above 2000' MSL until four miles on final approach.

Austin area airports not serviced by an Airport Traffic Control Tower or aircraft cancelling IFR after hours, may contact Austin Approach at 51 2−369−7865.

PREFERRED IFR ARRIVAL ROUTINGS

When KAUS is in a South Flow:

Inbound direction	Arrival/Route to File/Expect
North/Northeast/East – North of JAN	SEWZY or BLEWE ARRIVAL or MSTLO
Northeast/East/Southeast – South of JAN	WLEEE or BITER ARRIVAL or POTRR
South/Southwest	SAT V550 PINCH or DXEEE
Northwest	LAIKS or KALLA ARRIVAL

When KAUS is in a North Flow:

Inbound direction	Arrival/Route to File/Expect
North/Northeast/East – North of LFK	SEWZY or BLEWE ARRIVAL or MSTLO
Northeast/East/Southeast – South of LFK	WLEEE or BITER ARRIVAL or POTRR
South/Southwest	PALMS direct KAUS(Jets@9,000, Props@ 7,000)
Northwest	LAIKS or KALLA ARRIVAL

AFTER TOUCHDOWN:

After clearing the runway, you will be directed to contact Austin Ground on frequency 121.9. Do not stop unless giving way to other aircraft or vehicles. Advise Austin Ground of your parking destination (Atlantic, Signature, or Maintenance Ramp)

IFR DEPARTURE

Confirm your departure date and time with FBO upon arrival or as soon as possible. Provide any updates on desired departure time.

Race day departures should file flight plans with a proposed departure time 1 hour before the end of the race to allow for coordination and planning.

Austin area airports **NOT** serviced by a n Airport Traffic Control Tower, or pilots requesting clearance after hours, may contact Austin Approach at **512−369−7865** or on the above listed after hours frequencies.

Piston prop aircraft should expect 070 or 080 as a final altitude and request higher altitude with Houston ARTCC, Houston Approach, or San Antonio Approach, as appropriate.

Turboprops expect 090 or 100 as an interim altitude and request higher with Houston ARTCC.

Note: Please ensure that the correct ICAO format is utilized when filing your flight plan. Flight plans without the correct ICAO RNAV designators will be assigned conventional procedures.

Effective October 20−22, 2017

KAUS:

Engine Start–up and Taxi

All departing aircraft contact clearance delivery on 125.5, except PDC/CPDLC equipped aircraft. Advise if IFR or VFR, where you are parked, and ATIS code. Pilots are requested to delay engine start–up until you have your clearance and just immediately before taxi.

DO NOT CALL GROUND CONTROL TO TAXI until you are the number one aircraft at **SPOT 1, SPOT 2,** or the **intersection** of **TWY S** and **TWY C.**

DO NOT CALL THE TOWER FOR DEPARTURE until you are in the number one position for the runway.

Aircraft filed out of KAUS should file on of the following preferred routes:

JETS AND TURBOPROPS

NORTHEAST/EAST	ILEXY2 DEPT/CWK6 DEPT TNV TRANSITON next fix
SOUTHEAST	ILEXY2 DEPT/CWK6 DEPT TNV TRANSITON next fix
SOUTH	Direct PALMS direct CRP next fix
SOUTHWEST	BNDIA2 DEPT/AUS5 DEPT SAT TRANSITION next fix
WEST	MUCKY2 DEPT/AUS5 DEPT JCT TRANSITION next fix or AEROZ1
NORTH	ELOEL2 DEPT/AUS5 DEPT AGJ TRANSITION next fix

PROPS

PROPS FILE SAME AS ABOVE UNLESS DEPARTING IN THE FOLLOWING DIRECTIONS:

EAST	Direct CLL T254 LCH next fix or direct TNV V306 LCH next fix
SOUTHEAST	ELA V556 SBI next fix
NORTH	AUS5 DEPT AGJ TRANSITION next fix or CWK4 DEPT ACT TRANSITION next fix

KEDC/KGTU/KT74:

FOR KEDC ONLY– Printed copies of IFR clearances must be picked up from the clearance delivery desk in the airport FBO building.

GEORGETOWN AIRPORT (KGTU) – All departing IFR aircraft contact Georgetown Ground Control on 126.075 for IFR clearance prior to departure.

Aircraft filed out of KEDC/KGTU/KT74 should file one of the following preferred routes:

ROUTES:

JETS AND TURBOPROPS:

EAST/NORTHEAST	Direct TOAMY direct LOA direct LFK next fix
SOUTHEAST	Direct TNV direct IAH next fix or ILEXY2

SOUTHWEST/WEST	Direct JCT next fix or BNDIA2/MUCKY2/AEROZ1/AUS5
NORTHWEST/NORTH	Direct AGJ next fix or ELOEL2
SOUTH	Direct GARDS V17 SAT next fix, or BNDIA2

PROPS:

PROPS FILE SAME ABOVE UNLESS DEPARTING IN THE FOLLOWING DIRECTIONS:

EAST/NORTHEAST	Direct CLL T254 LCH next fix or direct TNV V306 LCH next fix
SOUTHEAST	Direct ELA V556 SBI next fix
NORTH	Direct DARTE V17 ACT next fix or direct AGJ next fix

KHYI:

SAN MARCOS AIRPORT (KHYI) – All departing IFR aircraft contact San Marcos Ground Control on 126.075 for IFR clearance prior to departure.

Aircraft file out of KHYI should file one of the following preferred routes:

ROUTES:

JETS AND TURBOPROPS:

NORTHEAST	Direct TNV next fix or ILEXY2
EAST/SOUTHEAST	Direct SEEDS direct ELA next fix or ILEXY2
SOUTHWEST/WEST	Direct BETTI V17 SAT next fix or BNDIA2
NORTHWEST/NORTH	Direct AGJ next fix or ELOEL2/AEROZ1/MUCKY2
SOUTH	Direct PALMS direct CRP next fix

PROPS:

PROPS FILE SAME ABOVE UNLESS DEPARTING IN THE FOLLOWING DIRECTIONS:

SOUTHEAST	Direct ELA V556 SBI next fix
NORTHEAST	Direct CLL T254 LCH next fix or direct TNV V306 LCH next fix
NORTH	Direct AGJ next fix or direct DARTE V17 ACT next fix

VFR DEPARTURES/IFR PICKUPS

Due to the high volume of traffic, VFR departures should not expect to obtain an IFR clearance within 100 NM of KAUS.

IFR OVERFLIGHTS

IFR overflights below 13,000 feet MSL expect routing to avoid the Austin area.

GENERAL INFORMATION

CUSTOMS

US Customs service is available at **KAUS** only. Customs Agents will come to your aircraft at the Atlantic, Signature, and Maintenance ramps. Pilots and passengers needing US Customs service are REQUIRED TO STAY IN THEIR AIRCRAFT UNTIL Customs Agents arrive at your aircraft.

Helicopter Traffic

Itinerant helicopter operations not operating with Henry Aviation may use the FBO helipads.

Helicopter traffic associated with Henry Aviation will not use the normal designated helicopter parking area on the FBO ramps unless they are refueling.

HENRY AVIATION HAS THE EXCLUSIVE RIGHTS IN/OUT OF COTA HELIPADS.

Commercial Aircraft Terminal Gate Area

The Commercial Aircraft Terminal Gate Area is defined as the commercial airline terminal, airline gates, and commercial airline aircraft parking areas, and is located just north of Taxiway G between Taxiway B and Taxiway C. This is restricted to pre−coordinated Air Carrier traffic.

OVERFLOW PARKING AREAS

Due to the large amount of traffic associated with the U.S. Grand Prix F1 Race, the Airport may designate the Cargo Ramp as an aircraft overflow parking area. When directed to an overflow parking area, please follow your signalman's instructions.

BANK OF AMERICA 500

MONSTER ENERGY NASCAR CUP EVENT

CHARLOTTE MOTOR SPEEDWAY
CHARLOTTE, NC

October 07–09, 2017

In anticipation of increased air traffic at the Charlotte International Airport and Charlotte Motor Speedway during this event, the following special air traffic procedures will be used to enhance safety and minimize delays. These procedures are effective during the following dates and times:

DATE	HOURS EDT	HOURS UTC
October 07–09	0700–2300	1100–0300

VFR HELICOPTER OPERATIONS

CHARLOTTE INTERNATIONAL AIRPORT TO SPEEDWAY– BLUE ROUTE

Contact CLT Tower 118.1 and request "BLUE ROUTE". After receiving VFR departure instructions, proceed direct Central Piedmont Community College, inside the I–277 loop, then on course Charlotte Motor Speedway. Expect Radar Services to be terminated upon leaving CLT CLASS B airspace.

SPEEDWAY TO CHARLOTTE INTERNATIONAL AIRPORT– GREY ROUTE

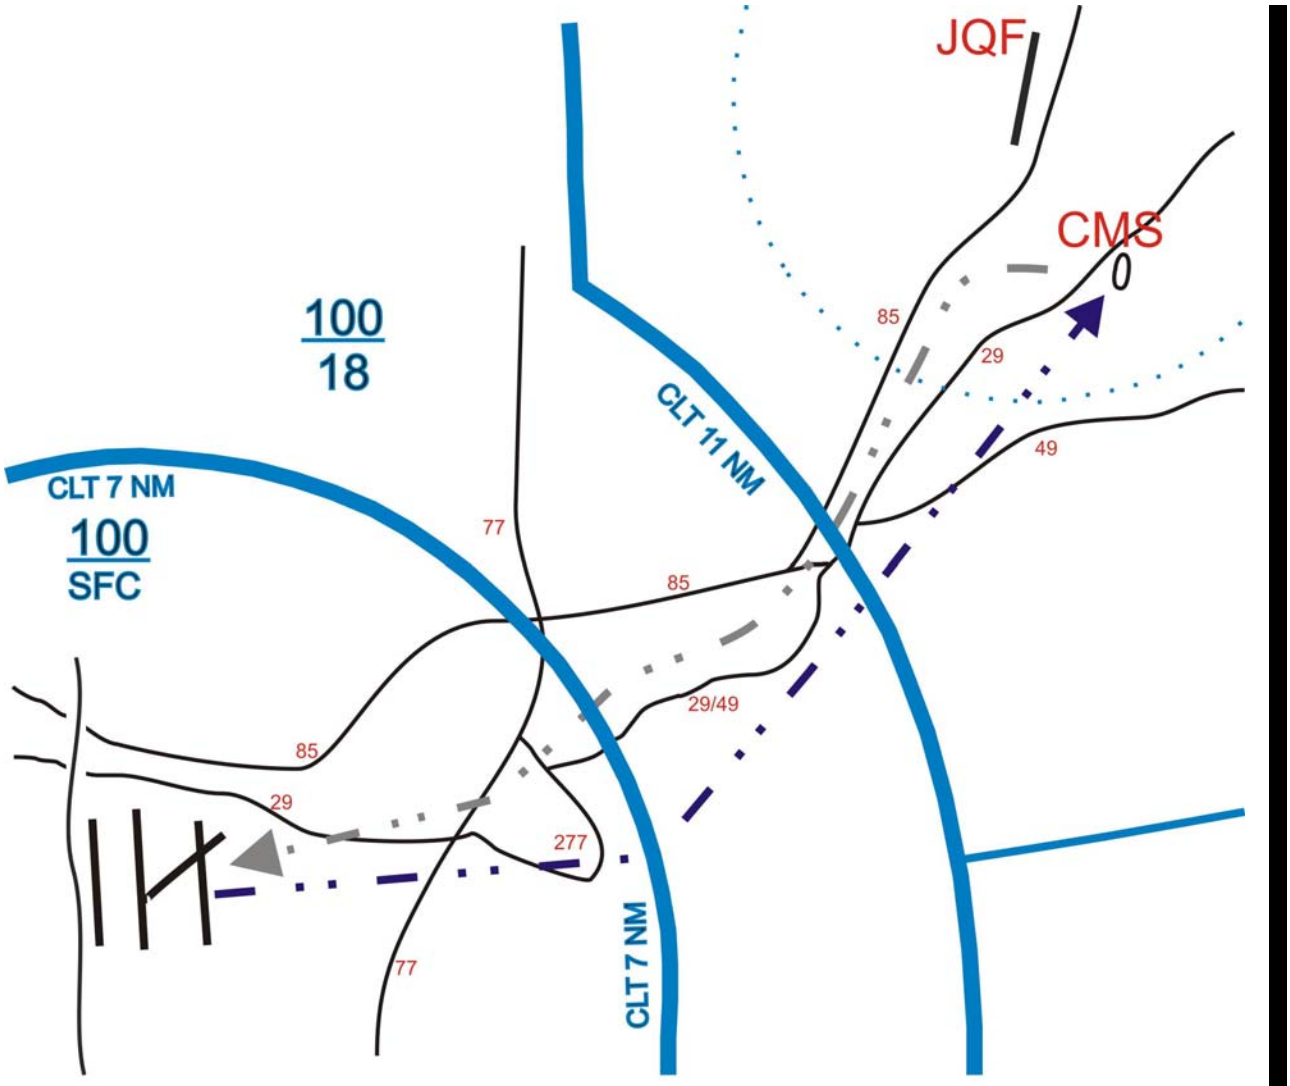

Contact CLT Tower 118.1 on the north side of Highway 49/29 and W. Sugar Creek Road, request "GREY ROUTE". Upon receipt of Class B clearance, proceed VFR inbound remaining on the North side of Highway 49/29 to I–277 loop, direct Bank of America Stadium, direct CLT Airport.

TRAFFIC MANAGEMENT INITIATIVES

Traffic Management initiatives may be implemented for IFR and VFR flights operating into and out of Concord Regional Airport. Inbound and Outbound helicopters are expected to squawk assigned beacon codes.

FREQUENCIES

CONCORD (JQF) TOWER	134.65
CHARLOTTE (CLT) APPROACH	128.32

Charlotte Class B Airspace is in effect. Remain clear of Class B Airspace unless authorized by ATC.

MONSTER ENERGY NASCAR CUP SERIES RACE AT DOVER

DOVER, DELAWARE

September 28 – October 2 2017

In anticipation of a large number of aircraft operating to and from the Dover area in conjunction with this event, the following procedures will be used to enhance safety and minimize air traffic delays.

These procedures are effective daily for aircraft operating to/from the following airports:

AIRPORT	LOCATION	IDENTIFIER
Dover AFB	Dover, Delaware	DOV
Sussex County Airport	Dover, Delaware	GED
New Castle Airport	Wilmington, Delaware	ILG
Delaware Airpark	Dover/Cheswold, Delaware	33N

PREFERRED ARRIVAL ROUTES

From CLT area:
RDU J209 SBY V29 LAFLN

From GSO area:
GSO QUAK3 CREWE J14 RIC V16 RIDGY

From WEST of GSO area:
GVE ENO3 DOV

From or through ZJX:
ORF J209 SBY V29 LAFLN

PREFERRED DEPARTURE ROUTES

To help minimize delays, it is important that **IFR JET** aircraft file via the following:

JQF/RUQ/VUJ:
(Primary) GRACO CONLE FIXET SCRAM WALCE LYH NASCR2
(Alternate) SBY J79 KATZN ISO J121 BARTL J4 FLO KABEE2

CLT
(Primary) GRACO CONLE FIXET SCRAM WALCE LYH CHSLY3 KCLT
(Alternate) SBY J79 KATZN COUPN CHSLY3

EXX/SVH
(Primary) GRACO CONLE FIXET SCRAM WALCE LYH HENBY
(Alternate) SBY J79 FKN V66 RDU GSO

PROP/TURBOPROP DEPARTURES

File via the following routes for destinations:

SOUTH and SOUTHWEST
CHOPS V16 LYH or
CHOPS V213 TAPPA

NORTH and NORTHWEST
ENO V268 BAL V214 MRB

EAST and NORTHEAST
SBY V1 or
SIE V139

ISM CONNECT 300
MONSTER ENERGY NASCAR CUP EVENT

NEW HAMPSHIRE MOTOR SPEEDWAY
Loudon, New Hampshire
September 21–24, 2017

In anticipation of a large number of aircraft operating to and from the Loudon area in conjunction with New Hampshire Motor Speedway events, the following procedures will be used to enhance safety and minimize air traffic delays. The procedures are effective for the following airports:

Airport	Identifier
Laconia Municipal	LCI
Concord Municipal	CON
Manchester	MHT

MANCHESTER CLASS "C" AIRSPACE

Due to air traffic volume, complexity and frequency congestion, practice instrument approach requests may incur large delays or be unavailable. VFR pilots should contact Boston Approach on the following frequencies **at least 20 miles** outside of the Manchester Airport for Class C service:

Location	Altitude	Frequency
Nashua Area	4,500 – 10,000 MSL	134.75
Manchester Area	4,500 – 10,000 MSL	134.75
Concord Area	4,500 – 10,000 MSL	134.75
Laconia Area	at or below 10,000 MSL	134.75
Nashua Area	at or below 4,000 MSL	124.9
Manchester Area	at or below 4,000 MSL	124.9
Concord Area	at or below 4,000 MSL	124.9
Pease Area	at or below 10,000 MSL	125.05

ARRIVALS

To minimize delays, pilots are encouraged to close their IFR flight plans with Boston Approach while airborne or promptly upon arrival via:

Airport	Frequency
LCI RCO	119.85
CON RCO	133.65

PREFERRED ARRIVAL ROUTES

KRITR3 FILDS ILLSA Q69 RICCS MGW JST PSB HNK PONCT ROZE1 MHT

IFR DEPARTURES

To minimize delays, it is important that pilots filing IFR flight plans file preferred routes to their destination airport. **Flight plans should be filed no later than 1600 UTC** (12 pm local) with a proposed departure time of 1600 UTC. **ATC** will amend the proposed departure time if necessary. Preferred Departure Routes have been created to assist in IFR Flight Plan filing and to provide users an efficient transition to the en route environment, reducing airborne delays and reroutes. These routes will be posted in FBOs located in the Concord and Laconia airports. Routes will also be available through the following:

FACILITY	PHONE
LEIDOS AFSS	(800) 992–7433
Boston ARTCC Traffic Management Unit	(603) 879–6666
Washington ARTCC Traffic Management Unit	(703) 771–3504

Due to air traffic complexity, volume, and airspace restrictions, aircraft filing routes that include J6, Q406, J48, Q448, J75, J77, J80 and Q480 west of the New York Metropolitan area (in the vicinity of SAX and CMK VORs) may experience tactical delays and/or reroutes. Pilots flying at altitudes 11,000 MSL through 17,000 MSL should file the preferred routes associated with those altitudes. Pilots filing Tower Enroute Control (TEC) routes at 10,000 MSL and below should file approved routes which transition through the New York and Washington Metropolitan areas (listed in the Chart Supplement). Flights to unlisted destination airports should use a route to a nearby NAVAID or airport listed in the route guide. **Except for emergencies, air–filed flight plans and VFR departures requesting an IFR clearance may encounter considerable airborne delay.**

DEPARTURE PROCEDURES

(Sunday, September 24, 2017)

LACONIA, NH:
To obtain an IFR clearance, pilots should visit (in person) the Customer Service Desk located in the terminal building to receive their hard copy clearance and instructions. Utilize UNICOM 123.0 for airport movement

and advise Boston Approach of start of taxi on frequency 119.85. Provide your Call Sign, CID, and revision number. IFR release will be issued by Boston Approach via the Laconia RCO. **Pilots are expected to fly the published IFR departure procedure.**

CONCORD, NH:
To obtain an IFR clearance, pilots should visit (in person) the Customer Service Desk located in the Concord Aviation Services hangar to receive their hard copy clearance and instructions. Utilize UNICOM 122.7 for airport movement and advise Boston Approach of start of taxi on 133.65. Provide your Call Sign, CID, and revision number. **Pilots are expected to fly the published IFR departure procedure.**

SUNBELT AGRICULTURAL EXPOSITION

SPENCE FIELD
MOULTRIE, GA
October 17 – 19, 2017

SPECIAL AIR TRAFFIC PROCEDURES

The following procedures will be used to enhance safety and minimize delays at Spence Airport (KMUL) Moultrie, GA during the Sunbelt Agricultural Exposition

GENERAL INFORMATION

Two–way radio communication with ATC is required.

Be alert for a high volume of high performance and other types of traffic in the vicinity of Spence Airport, including banner tow, advertising, and law enforcement aircraft.

Pilots are encouraged to keep transmissions to a minimum and listen to the ATIS.

Expect possible delays due to traffic volume.

All flight crews should be familiar with VFR arrival procedures for MUL.

OBTAIN A COMPLETE WEATHER BRIEFING AND CHECK NOTAMS PRIOR TO DEPARTURE TO ENSURE YOU HAVE THE MOST CURRENT INFORMATION

TEMPORARY AIRPORT TRAFFIC CONTROL TOWER

The FAA will operate a Temporary Airport Traffic Control Tower at Spence Airport (KMUL).

RADIO CALL	"SPENCE TOWER"
FREQUENCIES:	
ATIS	118.65
GROUND	121.6
TOWER	127.4

HOURS OF OPERATION: 0800–1800 EDT (1200–2200 UTC) daily, October 17–19.

APROACH CONTROL

Valdosta Approach will provide Approach Control Service on frequency 132.37 for arriving and departing IFR aircraft and VFR aircraft requesting traffic advisories.

ARRIVALS

VFR Arrivals:
To minimize frequency congestion, keep transmissions to a minimum; report call sign, aircraft type, and position.

Monitor ATIS for wind, altimeter, and arrival information.

From the South/Southwest: Proceed over the Moultrie Municipal Airport (MGR), remain at or above 1800 feet MSL to stay clear of the MGR traffic pattern, then contact Spence Tower.

From the Northwest/North/East: Contact Spence Tower five (5) miles from MUL. Expect to enter a RIGHT downwind to RWY 32 or LEFT downwind to RWY 14, unless otherwise instructed by ATC.

NOTE: DO NOT over−fly the Exposition below an altitude of 1300FT MSL.

IFR Arrivals:
There are NO published IAPs for Spence Airport.

When weather conditions require instrument approaches, the IAPs for MGR Airport are the most expeditious.

After canceling IFR with Valdosta Approach, pilots may continue to MUL VFR if weather conditions permit.

DEPARTURES

VFR Departures:
Monitor ATIS (118.65) for runway and taxi information.

MONITOR Ground Control (121.6), TAXI to the red or blue barrels for departure (red barrels intersection departure), and HOLD SHORT of the runway.

When number one in line, contact Tower (127.4), and advise ATC of direction of flight.

MONITOR ground control − DO NOT contact Tower until number one in line.

IFR Departures:
Pilots should file flight plans a minimum of one hour prior to the proposed departure time.

If weather conditions permit, pilots should request IFR clearances after they are airborne with Valdosta Departure Control (frequency 132.37).

Spence Ground Control (frequency 121.6) will issue IFR clearances on request. Pilots should expect departure delays.

All aircraft expect an initial maximum altitude of 7000FT until clear of the Moody1 MOA.

LEIDOS FLIGHT SERVICES

Pilot briefing and flight planning services are available online through Leidos Pilot Portal at https://www.1800wxbrief.com/Website/ or by telephone at 1−800−WX−BRIEF (**1−800−992−7433**). Press 1 for a briefer, then press 4−2−1 or say “Georgia”.

Contact AFSS on 121.1R and receive over MGR VOR, or frequency 122.35 for VFR flight plan activation/closure or in−flight briefing service. In−flight pilot reports are encouraged.

UNIVERSITY OF ALABAMA FOOTBALL

SPECIAL AIR TRAFFIC PROCEDURES

TUSCALOOSA, AL
September 16, 2017 – November 18, 2017

The following procedures will be implemented to enhance safety and minimize delays during the following University of Alabama home football games:

DAY	DATE	OPPONENT
Saturday	September 16	Colorado State
Saturday	September 30	Ole Miss
Saturday	October 14	Arkansas
Saturday	October 21	Tennessee
Saturday	November 4	LSU
Saturday	November 18	Mercer

TRAFFIC MANAGEMENT

Traffic Management Initiatives may be required during peak traffic periods or during periods of reduced airport capacity. Pilots should be prepared for potential reroute, mile−in−trail or altitude restriction, holding, ground delay, or ground stop.

Plan to arrive early if possible to avoid delays, airspace congestion, and limited parking.

AIRPORT TRAFFIC CONTROL TOWER

The Tuscaloosa Regional Airport Traffic Control Tower (TCL ATCT) will operate 0700−2000 Local unless otherwise advised by NOTAM.

FREQUENCIES	
CLEARANCE DELIVERY	120.775
GROUND CONTROL	121.8
TOWER	126.3
UNICOM	122.95
ASOS	132.825

APPROACH CONTROL

Birmingham Approach will provide Approach Control Service on frequency 120.15 to arriving/departing IFR aircraft and VFR aircraft requesting traffic advisories.

ARRIVALS

RWY 22 is the preferred arrival runway, wind conditions permitting.

VFR Arrivals**:**
Monitor Tower frequency 126.3.

Do NOT contact Tower until ten (10) miles from TCL.

Keep transmissions brief to reduce frequency congestion.

Enter the traffic pattern as instructed by TCL Tower.

IFR Arrivals**:**
Limited radar coverage exists in the Tuscaloosa area.

Expect a visual approach if weather permits or RNAV RWY22 approach if weather requires.

If instrument approach is required, expect clearance for a straight−in only approach.

Expect radar vectors at or above 4000FT to remain in radar coverage.

Due to non−radar separation requirements, expect holding at or above 4000FT until approach clearance can be issued.

If possible, do not cancel IFR until in communication with TCL TOWER.

Routes:
During periods of peak demand, IFR aircraft may expect clearance via:

ARRIVAL DIRECTION	ROUTE
NORTH	NULLS VUZ LDK KTCL
NORTHWEST	SHIMS VUZ LDK KTCL
WEST/SOUTHWEST	IGB NESTS VUZ LDK KTCL
SOUTH/SOUTHEAST	MGM HERKO VUZ LDK KTCL
EAST	KIOSK VUZ LDK KTCL
NORTHEAST	DIODE VUZ LDK KTCL

DEPARTURES

RWY 04 is the preferred departure runway, wind conditions permitting.

DO NOT LEAVE THE RAMP/PARKING AREA until receiving IFR Clearance from Clearance Delivery (120.775).

DO NOT CALL THE TOWER FOR DEPARTURE until you are in the number one position for the runway.

VFR Departures: As demand dictates, VFR departures may be assigned an alternate departure runway by Ground Control.

TAXI PROCEDURES

Dixie Air: Proceed via Taxiway D to Taxiway D5 and hold short of RWY 30. When number one at RWY 30, contact Ground Control (121.8), for further instructions.

Hawthorne Global: Proceed to Taxiway B via Taxiway B2 and hold short of Taxiway B. When number one at Taxiway B, contact Ground Control (121.8) for further instructions.

Terminal Ramp, West Overflow Ramp, University Ramp, Runway 12/30 (clsd for parking): Proceed to Taxiway A and hold short of Taxiway A. When number one at Taxiway A, contact Ground Control (121.8) for further instructions.

DO NOT CALL GROUND CONTROL until in reaching number one position holding short.

IMPORTANT – Pilots should MONITOR the correct frequency.

VFR /IFR PICKUP PROCEDURES

Unless an **emergency** situation exists:

DO NOT request IFR pickup below 3,000FT feet MSL, due to radar coverage. If ceilings are below 4,000FT you should depart IFR.

Squawk 1200 on departure.

If planning an IFR pick−up, ensure your IFR flight plan is on file.

Do NOT expect to receive IFR pick−up or air−filed flight plan clearance within 40 miles of TCL.

TUSCALOOSA REGIONAL AIRPORT (TCL)

Ramps designated for aircraft parking include FBO ramps, Overflow Parking on the west ramp, and RWY 12/30 when closed by NOTAM.

All Ramp/Parking Areas and taxiways west of Taxiway A are considered non−movement areas.

If parked on RWY 12/30, use chocks to secure wheels. DO NOT LOCK BRAKES.

Aircraft parked on RWY 12/30 must be removed within 12 hours of arrival.

When Overflow Parking and/or RWY 12/30 are in use for parking, a DROP−AND−GO AREA will be activated on the terminal ramp between Taxiway A2 and Taxiway G.

Only drop−off/pick−up aircraft, team charters, or aircraft pre−approved by the airport manager are permitted to use the terminal ramp. Fuel service is not available for non−approved aircraft located on the terminal ramp and will be given last priority for departure.

Aircraft willing to drop−and−go rather than park should notify ATC. TCL ATCT may approve the request based on traffic volume, weather, and workload.

Aircraft designated for passenger pick−up can expect access to the terminal ramp once their parties have arrived at the airport terminal and ramp space is available. During periods of high traffic volume, temporary parking may be required on the overflow ramp unless otherwise advised by air traffic control.

The Airport Terminal is the DESIGNATED PASSENGER DROP−OFF/PICK−UP LOCATION for aircraft not parked at FBOs.

Ground transportation coordinated for aircraft not parked at FBOs shall be instructed to meet their parties at the airport terminal.

When passengers are ready, dedicated shuttles will provide transportation to the airport terminal for connect with ground transportation to the event.

PASSENGERS REMAIN WITH THE AIRCRAFT UNTIL A SHUTTLE ARRIVES.

Shuttles will provide transportation for returning passengers from the airport terminal to aircraft not located at FBOs.

FBO PARKING

Pilots/operators are strongly urged to contact either airport FBO **BEFORE** flying to TCL to ensure parking is available for overnight parking or passenger pick−up/drop−off located on their ramp. Fuel requests shall be submitted to the FBO before the operator leaves the airport or before the start of the event.

Any special ground transportation requests must be coordinated with the FBO(s). Requests will be considered based on available ramp space and support staff.

QUESTIONS?

Call the Tuscaloosa Regional Airport at 205−248−5300, weekdays 0800−1600L or visit https://www.tclgameday.com for the latest information regarding game day operations at the Tuscaloosa Regional Airport.

FLIGHT PLANNING AND GENERAL INFORMATION

Be alert for a higher than normal number of aircraft operating in the vicinity of the Tuscaloosa Regional Airport. Expect various aircraft types, including numerous banner tow, advertising, and law enforcement aircraft.

Two−way radio communication is required. Request for No Radio (NORDO) operation will not be approved. To minimize frequency congestion, please keep transmissions to a minimum.

Overflight operations below 2500FT should avoid the TCL area by at least 5NM. Aircraft operations other than arrival/departure should not expect approval from TCL ATCT. Practice approaches, touch−and−go operations, training flights, and formation flights may be directed to remain clear of the area.

Pilots should file flight plans with a proposed departure time (P−Time) one hour prior to the intended time of departure to allow TCL ATCT to plan airport movement and ensure flight plan info is available when clearance is requested.

ATC will ensure flight plans do not expire until four hours after the filed P−Time.

IMPORTANT! OBTAIN A COMPLETE WEATHER BRIEFING AND CHECK NOTAMS AND TRAFFIC ADVISORIES PRIOR TO DEPARTURE TO ENSURE YOU HAVE THE MOST CURRENT INFORMATION

LEIDOS FLIGHT SERVICES

Pilot briefing and flight planning services are available online through Leidos Pilot Portal at https://www.1800wxbrief.com/Website/ or by telephone at 1−800−WX−BRIEF (**1−800−992−7433**). Press 1 for a briefer, then press 2−5−2 or say “Alabama”.

Contact Anniston Radio on 122.2 in the Tuscaloosa, AL area for VFR flight plan activation and closure. In−flight pilot reports are encouraged.

Contact Flight Service on the following frequencies for in−flight briefing services:

DIRECTION FROM TUSCALOOSA,

UNIVERSITY OF MISSISSIPPI FOOTBALL

SPECIAL AIR TRAFFIC PROCEDURES

OXFORD, MS
September 2, 2017 – November 18, 2017

The following procedures will be used to enhance safety and minimize delays during the following University during the following University of Mississippi home football games:

Day	Date	Opponent
Saturday	September 2	South Alabama
Saturday	September 9	TN–Martin
Saturday	September 14	Vanderbilt
Saturday	October 21	LSU
Saturday	October 28	Arkansas
Saturday	November 11	LA–Lafayette
Saturday	November 18	Texas A&M

Be alert for a high volume of various aircraft types operating in the vicinity of University–Oxford Airport (UOX) during Ole Miss home football games. Pilots are encouraged to keep transmissions to a minimum to reduce frequency congestion.

OBTAIN A COMPLETE WEATHER BRIEFING AND CHECK NOTAMS AND FLIGHT ADVISORIES PRIOR TO DEPARTURE TO ENSURE YOU HAVE THE MOST CURRENT INFORMATION

TEMPORARY AIRPORT TRAFFIC CONTROL TOWER

A Temporary Airport Traffic Control Tower (TATCT) will be in operation at University–Oxford Airport (UOX) during select, high–traffic games.

Dates and times are subject to change and information will be published by NOTAM.

RADIO CALL	"OXFORD TOWER"

DEPARTURES

Unless an **EMERGENCY** situation exists:

DO NOT expect IFR pick up or air–filed flight plan clearance within 50 NM of UOX. Airborne IFR pickup is strongly discouraged

Do not request IFR pickup below 3000FT MSL due to limited radar coverage

Ensure IFR flight plans are on file with flight service

Departing VFR, squawk 1200

Departing VFR, do not contact Memphis Center frequency until at least 20NM from UOX

TEMPORARY FLIGHT RESTRICTION

A Temporary Flight Restrictions (TFR) will be in effect for these events. See **FDC NOTAM 7/4319** for details.

LEIDOS FLIGHT SERVICES

Pilot briefing and flight planning services are available online through Leidos Pilot Portal at https://www.1800wxbrief.com/Website/ or by telephone at 1–800–WX–BRIEF (**1–800–992–7433**).

MISSISSIPPI STATE FOOTBALL

SPECIAL AIR TRAFFIC PROCEDURES

Starkville, MS
September 2, 2017 – November 23, 2017

The following procedures will be used to enhance safety and minimize delays during the following University during the following Mississippi State home football games:

Day	Date	Opponent
Saturday	September 2	Charleston Southern
Saturday	September 16	LSU
Saturday	October 14	BYU
Saturday	October 21	Kentucky
Saturday	November 4	UMass
Saturday	November 11	Alabama
Thursday	November 23	University of Mississippi

Be alert for a high volume of various aircraft types operating in the vicinity of George M Bryan Airport (STF) and Golden Triangle Regional Airport (GTR) on these dates. Pilots are encouraged to keep transmissions to a minimum to reduce frequency congestion.

Section 5. Airshows

2017 U.S. & Canadian Military Aerial Aircraft/Parachute Demonstration

During CY 2017, the U.S. and Canadian Military Aerial Demonstration Teams (Thunderbirds, Blue Angels, Snowbirds, and Golden Knights) will be performing on the dates and locations listed below.

Pilots should expect Temporary Flight Restrictions (TFR) in accordance with 14 CFR Section 91.145, Management of aircraft operations in the vicinity of aerial demonstrations and major sporting events. The dimensions and effective times of the TFRs may vary based upon the specific aerial demonstration event and will be issued via the U.S. NOTAM system. Pilots are strongly encouraged to check FDC NOTAMs to verify they have the most current information regarding these airspace restrictions.

The currently scheduled 2017 aerial demonstration locations, subject to change without notice, are:

DATE		USAF Thunderbirds	USN Blue Angels	USA Golden Knights	Canadian Snowbirds
September	13–14			JB Andrews, MD	
	14			Smithfield, NC	
	14–16			Columbus, OH	
	16			Fort Bragg, NC	
	16-17	JB Andrews, MD	NAS Oceana, VA	JB Andrews, MD	
	23-24	Colorado Springs, CO	MCAS Miramar, CA	MCAS Miramar, CA	
	23			Johnson City, TN	
	30	Open Date	Huntington Beach, CA	Charleston, WV Danville, IL	Huntington Beach, CA
October	1	Open Date	Huntington Beach, CA	Danville, IL	Huntington Beach, CA
	7–8	Minden, NV	San Francisco, CA	Minden, NV Washington, DC	San Francisco, CA
	14–15	Phoenix (Speedway), AZ		Punta Gorda, FL Peachtree City, GA	Boise, ID
	21–22	Houston, TX	Rome, GA	Holloman AFB, NM	
	24–25			Fort Bragg, NC	
	27			Red Springs, NC	
	28-29	Moody AFB, GA	Fort Worth, TX		
November	4			Lexington, KY Fayetteville, NC	
	4–5	JB San Antonio Lackland Kelly, TX	NAS Jacksonville, FL		
	10–11		NAS Pensacola, FL		
	11			Prairie View, TX	
	11–12	Nellis AFB, NV		Austin, TX	

DATE		USAF Thunderbirds	USN Blue Angels	USA Golden Knights	Canadian Snowbirds
	22–23			Hyattsville, MD	
December	9–10			Philadelphia, PA	

Note: Dates and locations are scheduled "show dates" only and do not reflect arrival or practice date TFR periods that may precede the specific aerial demonstration events listed above. Again, pilots are strongly encouraged to check FDC NOTAMs to verify they have the most current information regarding any airspace restrictions.

AOPA

CAA
CONNECTICUT AIRPORT AUTHORITY

VFR ARRIVALS OVERVIEW

ATIS: 127.0 GROTON TOWER: 125.6 GROTON GROUND: 121.65

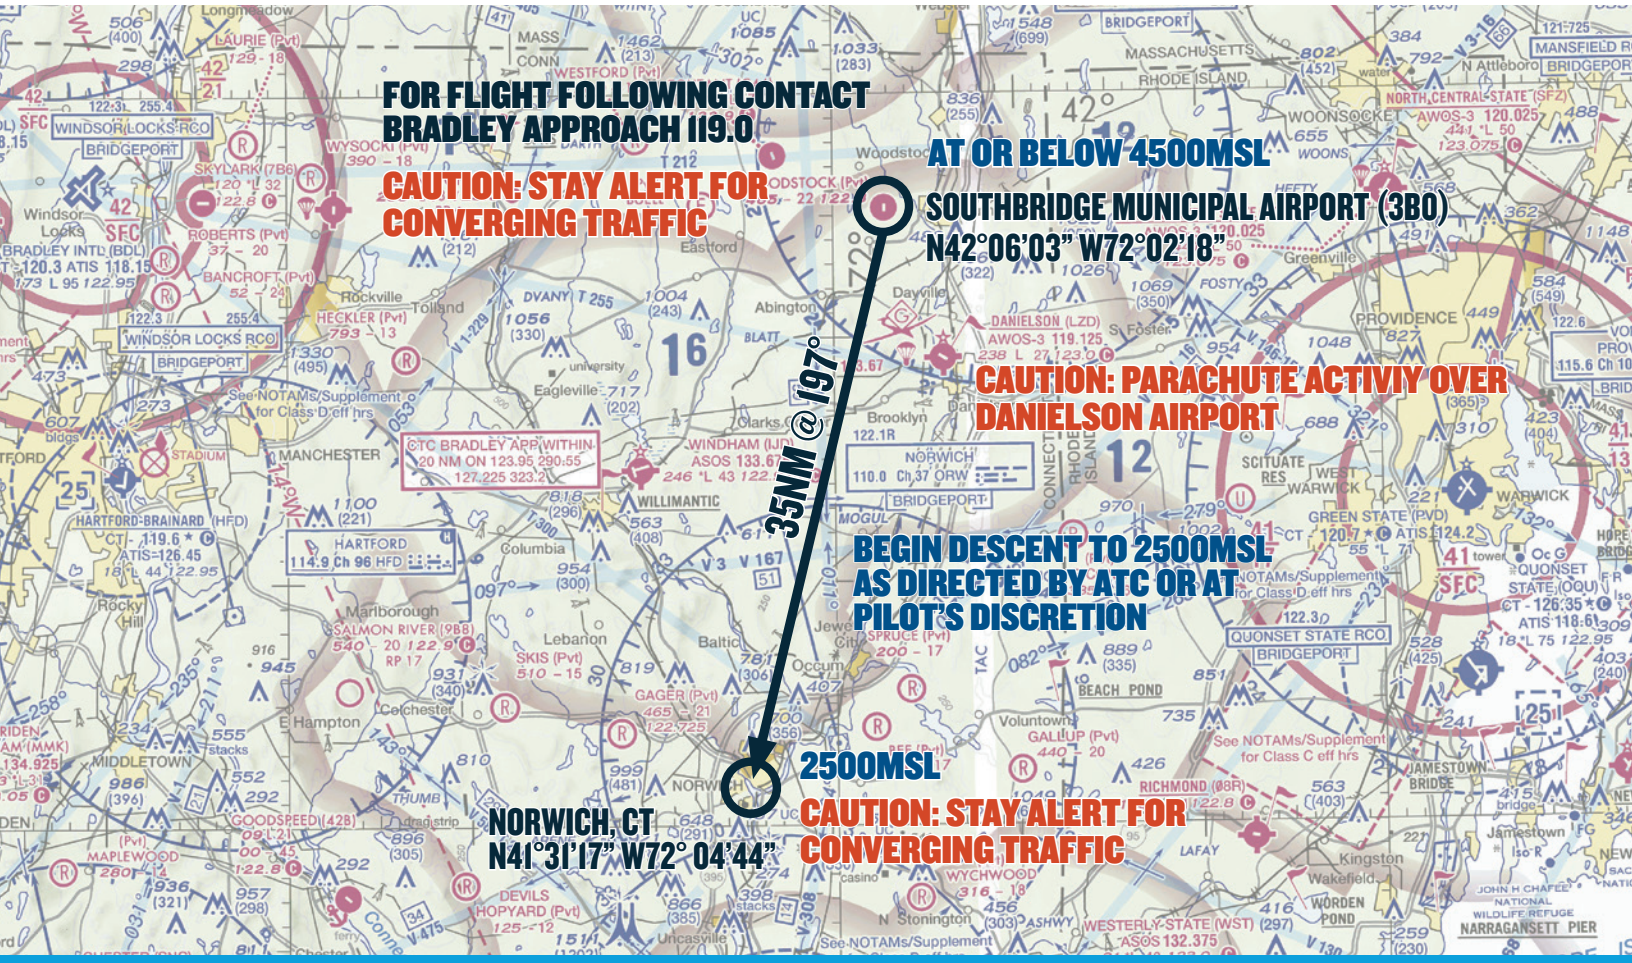

TEMPORARY VFR PROCEDURES

Specific procedures contained within this NOTAM may be revised at the time of the event. Pilots are urged to review all applicable NOTAMs and arrival/departure procedures prior to conducting a flight to Groton-New London Airport. Users are encouraged to check NOTAMs frequently to verify they possess the most current revisions. This NOTAM does not supersede restrictions pertaining to the use of airspace contained in FDC NOTAMS.

ALL VFR ARRIVALS BEGIN AT

1. Southbridge Municipal Airport (3B0), 46 NM north of Groton-New London Airport (GON), or
2. Meriden Markham Municipal Airport (MMK), 37 NM northwest of Groton-New London Airport (GON), or
3. Narragansett Pier, 28 NM northeast of Groton-New London Airport (GON).

VFR PROCEDURES
ARRIVALS OVER SOUTHBRIDGE MUNICIPAL AIRPORT (3B0)

CHECK GROTON ATIS ON 127.0 AS SOON AS PRACTICAL.

This procedure begins over Southbridge Municipal Airport (3B0) at or below **4500 feet MSL**. For VFR flight following contact Bradley Approach on **119.0**.

Caution: Stay alert for converging traffic.

Proceed direct from Southbridge Municipal Airport to Norwich, CT; 35 NM on an approximate heading of 197°. Plan to arrive over Norwich, CT at **2500 feet MSL**. Begin descent as directed by ATC or at pilot's discretion.

Caution: Stay alert for converging traffic.

If in communication with ATC, expect radar services to be terminated prior to reaching Norwich, CT and to be instructed to contact Groton Tower on **125.6**. If not in communication with ATC, contact Groton Tower on **125.6** just prior to reaching Norwich, CT.

From Norwich, stay 1 mile east of the Thames River and follow it south toward Groton-New London Airport (GON).

Caution: Remain clear of the Naval Submarine Base, 2 NM north of the Gold Star Memorial Bridge/ I-95 on the east side of the Thames River.

If traffic volume requires holding, follow instructions from Groton Tower on **125.6** and expect to fly the hold procedure as depicted in the *THAMES RIVER VFR HOLD GRAPHIC*. All aircraft should fly **right turns** at **2500 feet MSL**. *Southbound traffic stay east of the Thames River. Northbound traffic stay west of the Thames River.*

Caution: Northbound traffic should remain clear of the U.S. Coast Guard Academy, 1/2 mile north of the Gold Star Memorial Bridge/I-95 on the west side of the Thames River.

Caution: Stay alert for converging traffic.

When Groton Tower announces that holding is no longer required, aircraft should complete the hold and continue inbound toward Groton-New London Airport (GON). Begin descent to traffic pattern altitude at pilot's discretion.

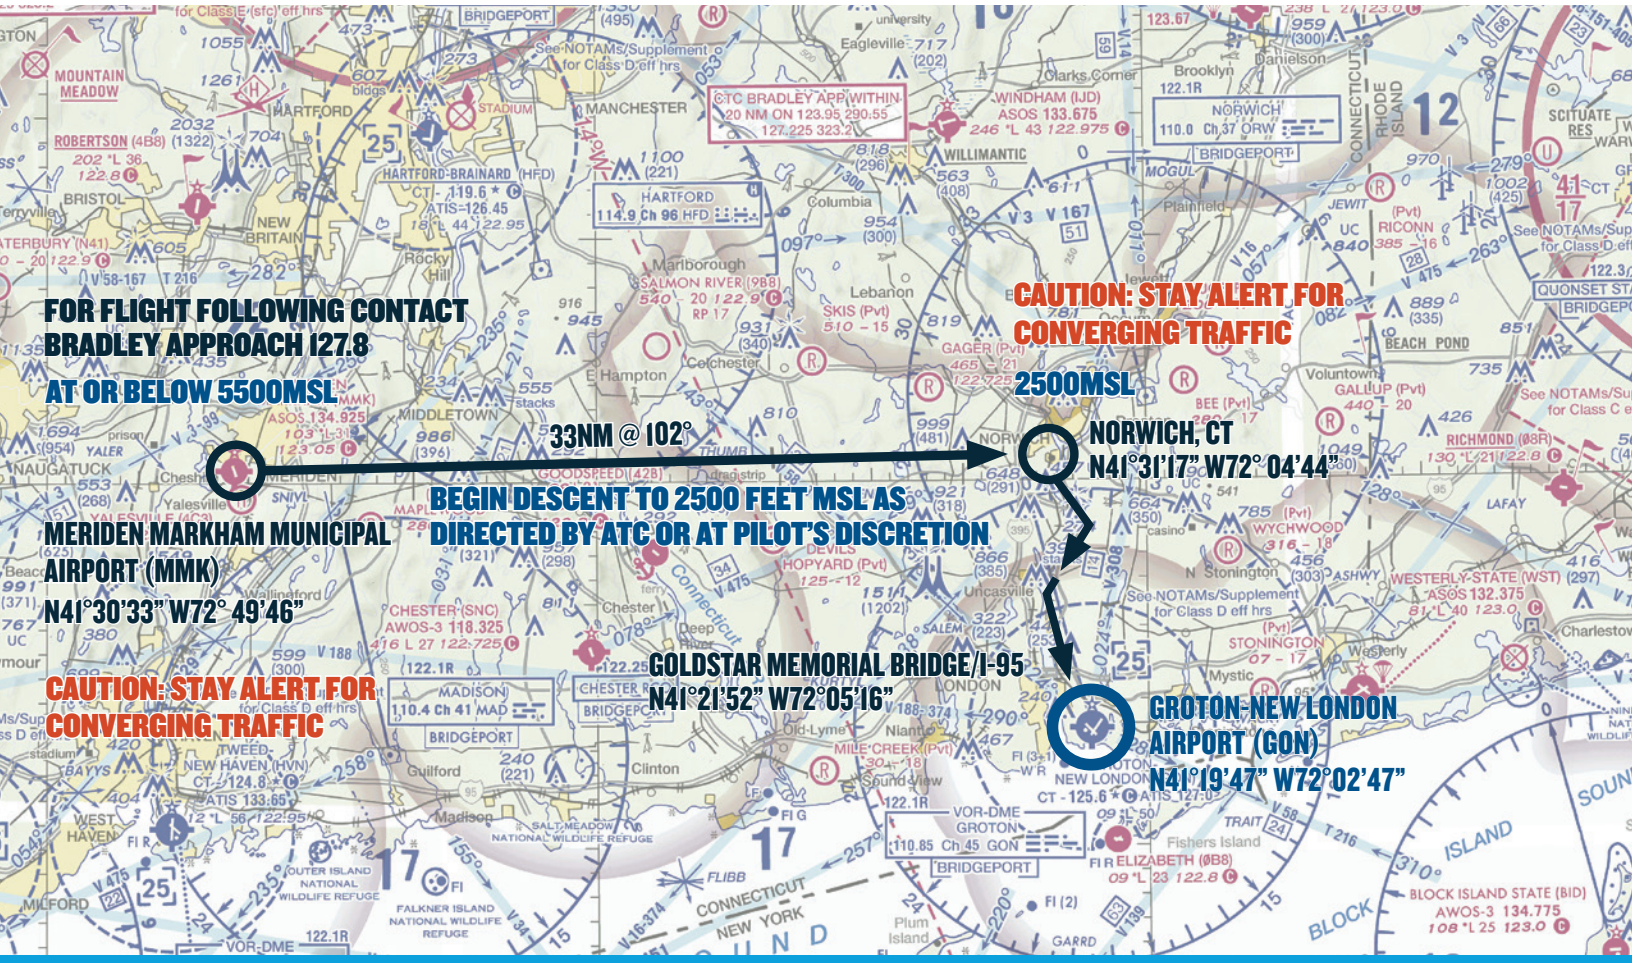

GON TPA: 1000 feet MSL light aircraft; 1500 feet MSL multi-engine/turbine aircraft

Depending on wind conditions, expect to fly either a left downwind for runway 5 or a right downwind or extended right base for runway 23.

After landing, do not stop on the runway unless necessary. Exit the runway as quickly and as safely as possible at the first available taxiway. Continue far enough forward so as not to block subsequent arrivals. **UNLESS OTHERWISE INSTRUCTED BY GROTON TOWER**; continue to taxiway C and **MONITOR** Ground on **121.65**. At taxiway C, follow Marshallers' instructions to the designated parking areas.

VFR PROCEDURES

ARRIVALS OVER MERIDEN MARKHAM MUNICIPAL AIRPORT (MMK)

CHECK GROTON ATIS ON 127.0 AS SOON AS PRACTICAL.

This procedure begins over Meriden Markham Municipal Airport (MMK) at or below **5500 feet MSL**. For VFR flight following contact Bradley Approach on **127.8**.

Caution: Stay alert for converging traffic.

Proceed direct from Meriden Markham Municipal Airport to Norwich, CT; 33 NM on an approximate heading of 102°. Plan to arrive over Norwich, CT at **2500 feet MSL**. Begin descent as directed by ATC or at pilot's discretion.

Caution: Stay alert for converging traffic.

If in communication with ATC, expect radar services to be terminated prior to reaching Norwich, CT and to be instructed to contact Groton Tower on **125.6**. If not in communication with ATC, contact Groton Tower on **125.6** just prior to reaching Norwich, CT.

From Norwich, stay 1 mile east of the Thames River and follow it south toward Groton-New London Airport (GON).

Caution: Remain clear of the Naval Submarine Base, 2 NM north of the Gold Star Memorial Bridge/ I-95 on the east side of the Thames River.

If traffic volume requires holding, follow instructions from Groton Tower on **125.6** and expect to fly the hold procedure as depicted in the *THAMES RIVER VFR HOLD GRAPHIC*. All aircraft should fly **right turns** at **2500 feet MSL**. *Southbound traffic stay east of the Thames River. Northbound traffic stay west of the Thames River.*

Caution: Northbound traffic should remain clear of the U.S. Coast Guard Academy, 1/2 mile north of the Gold Star Memorial Bridge/I-95 on the west side of the Thames River.

Caution: Stay alert for converging traffic.

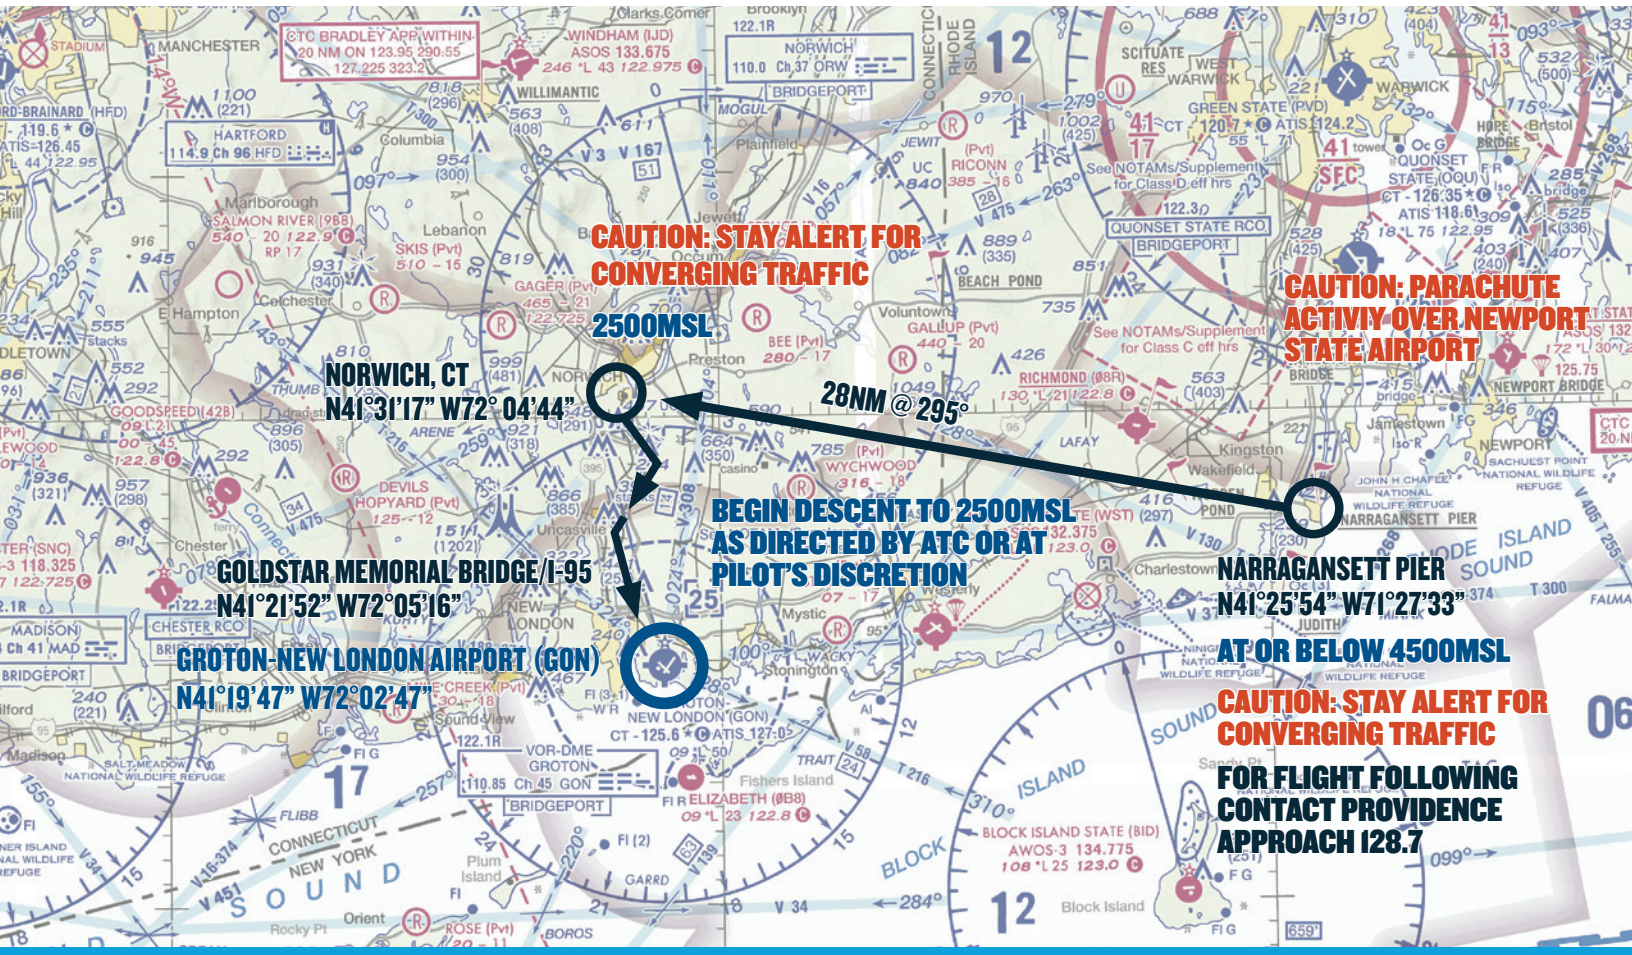

When Groton Tower announces that holding is no longer required, aircraft should complete the hold and continue inbound toward Groton-New London Airport (GON). Begin descent to traffic pattern altitude at pilot's discretion.

GON TPA: 1000 feet MSL light aircraft; 1500 feet MSL multi-engine/turbine aircraft

Depending on wind conditions, expect to fly either a left downwind for runway 5 or a right downwind or extended right base for runway 23.

After landing, do not stop on the runway unless necessary. Exit the runway as quickly and as safely as possible at the first available taxiway. Continue far enough forward so as not to block subsequent arrivals. **UNLESS OTHERWISE INSTRUCTED BY GROTON TOWER**; continue to taxiway C and **MONITOR** Ground on **121.65**. At taxiway C, follow Marshallers' instructions to the designated parking areas.

VFR PROCEDURES
ARRIVALS OVER NARRAGANSETT PIER

CHECK GROTON ATIS ON 127.0 AS SOON AS PRACTICAL.

This procedure begins over Narragansett Pier at or below **4500 feet MSL**. For VFR flight following contact Providence Approach on **128.7**.

Caution: Stay alert for converging traffic.

Proceed direct from Narragansett Pier to Norwich, CT; 28 NM on an approximate heading of 295°. Plan to arrive over Norwich, CT at **2500 feet MSL**. Begin descent as directed by ATC or at pilot's discretion.

Caution: Stay alert for converging traffic.

If in communication with ATC, expect radar services to be terminated prior to reaching Norwich, CT and to be instructed to contact Groton Tower on **125.6**. If not in communication with ATC, contact Groton Tower on **125.6** just prior to reaching Norwich, CT.

From Norwich, stay 1 mile east of the Thames River and follow it south toward Groton-New London Airport (GON).

Caution: Remain clear of the Naval Submarine Base, 2 NM north of the Gold Star Memorial Bridge/ I-95 on the east side of the Thames River.

If traffic volume requires holding, follow instructions from Groton Tower on **125.6** and expect to fly the hold procedure as depicted in the *THAMES RIVER VFR HOLD GRAPHIC*. All aircraft should fly **right turns** at **2500 feet MSL**. *Southbound traffic stay 1 mile east of the Thames River. Northbound traffic stay 1 mile west of the Thames River.*

Caution: Northbound traffic should remain clear of the U.S. Coast Guard Academy, 1/2 mile north of the Gold Star Memorial Bridge/I-95 on the west side of the Thames River.

Caution: Stay alert for converging traffic.

When Groton Tower announces that holding is no longer required, aircraft should complete the hold and continue inbound toward Groton-New London Airport (GON). Begin descent to traffic pattern altitude at pilot's discretion.

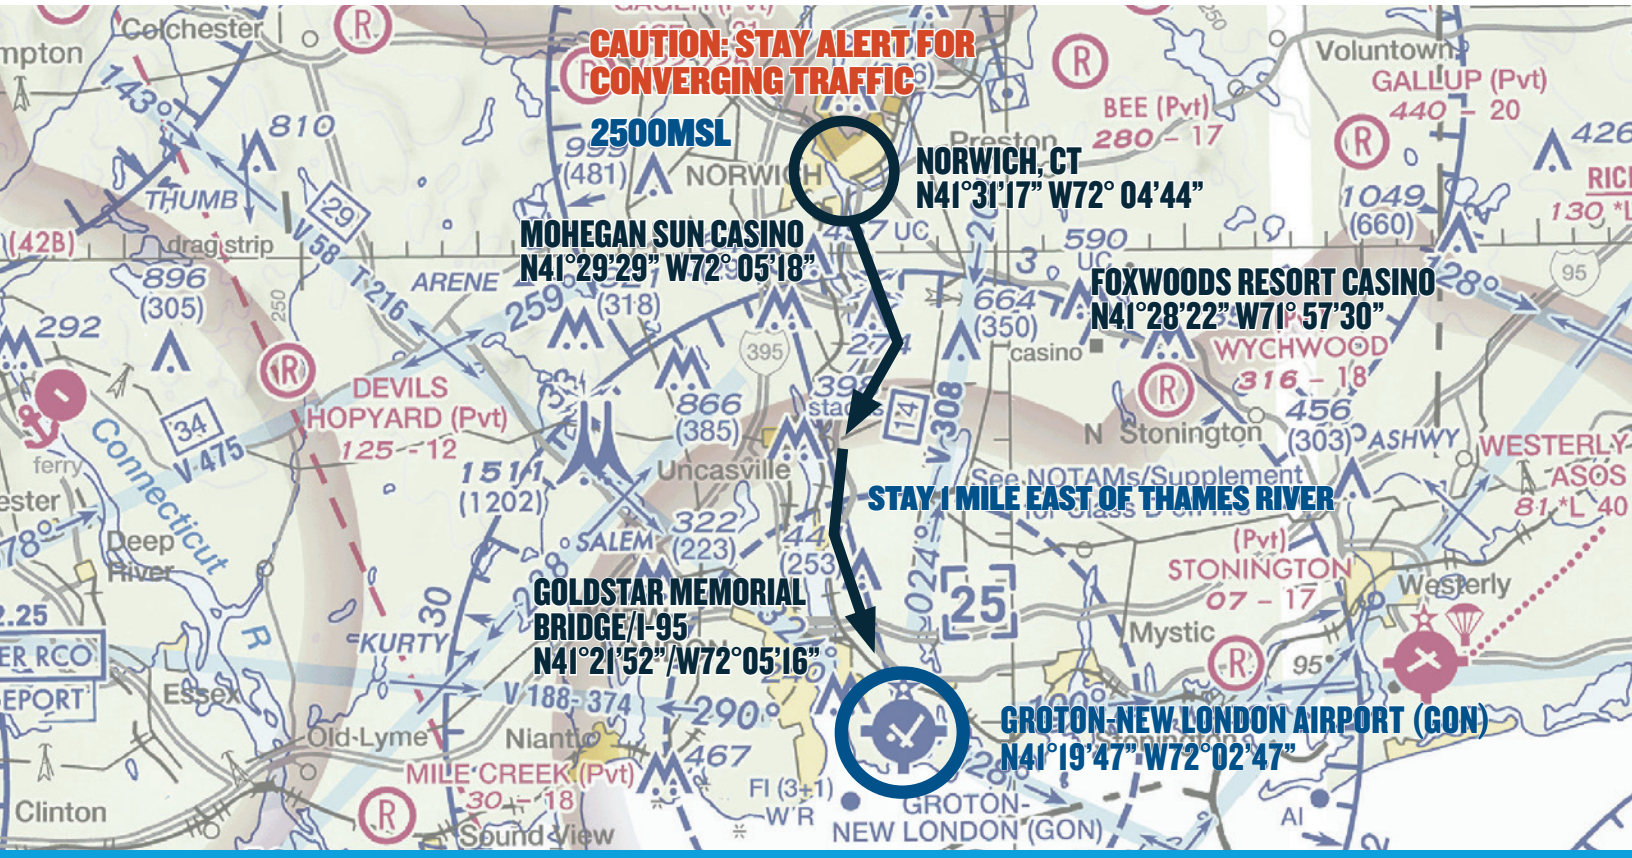

GON TPA: 1000 feet MSL light aircraft; 1500 feet MSL multi-engine/turbine aircraft

Depending on wind conditions, expect to fly either a left downwind for runway 5 or a right downwind or extended right base for runway 23.

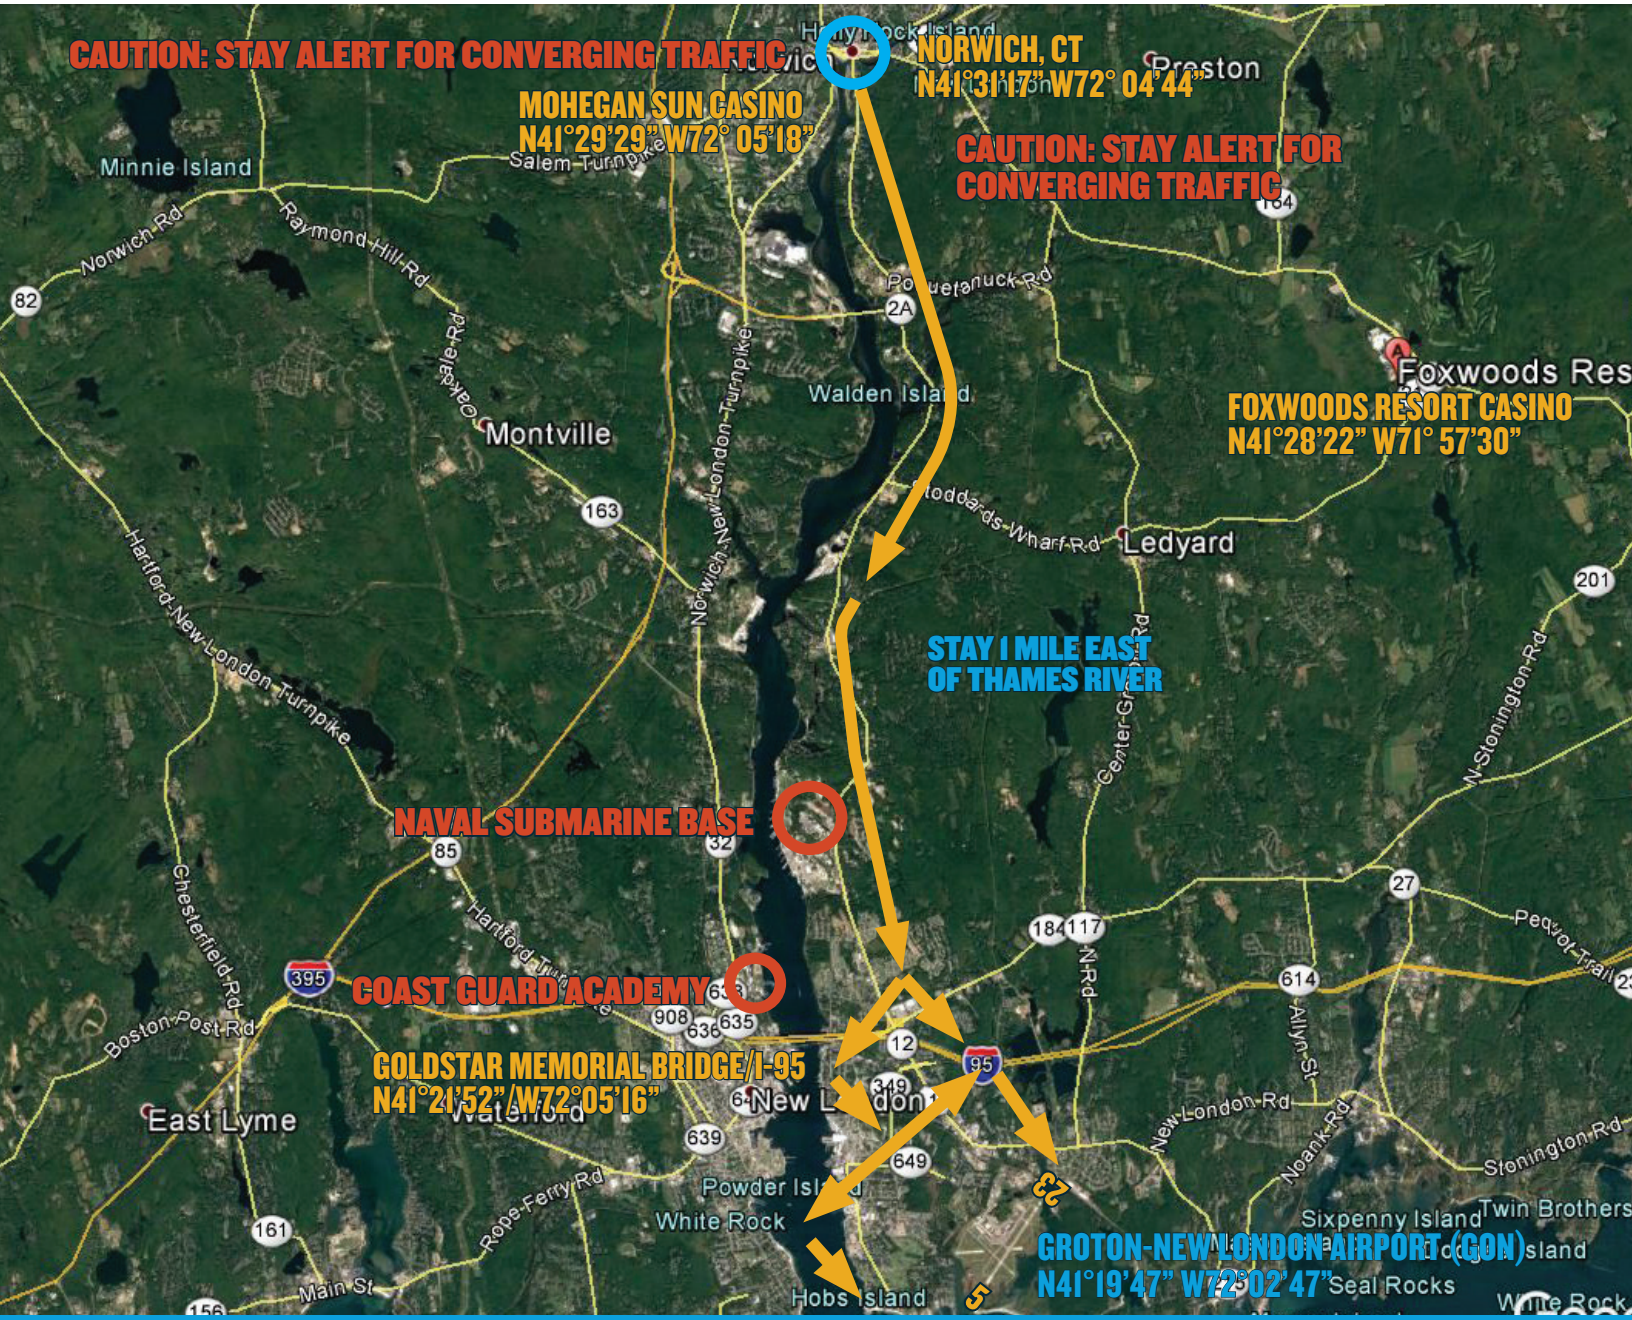

After landing, do not stop on the runway unless necessary. Exit the runway as quickly and as safely as possible at the first available taxiway. Continue far enough forward so as not to block subsequent arrivals. **UNLESS OTHERWISE INSTRUCTED BY GROTON TOWER**; continue to taxiway C and **MONITOR** Ground on **121.65**. At taxiway C, follow Marshallers' instructions to the designated parking areas.

ATIS: 127.0 GROTON TOWER: 125.6 GROTON GROUND: 121.65

IFR DELAYS

There is no Special Traffic Management Program for this event. No arrival or departure reservations are required. IFR separation requirements may cause delays when arrival rates exceed airport capacity. Pilots on an IFR flight plan should be prepared for potential holding. IFR flight plans to Groton-New London Airport should be filed **at least 2 hours prior** to proposed departure time. **VFR flight on designated arrival routes is highly recommended if practical.**

AIRPORT RESTRICTIONS

Groton-New London Airport will be open only to aircraft with a Prior Permission Required number during the following hours:

6:00 PM EDT Thursday, October 5, 2017 until 7:00 AM EDT Friday, October 6, 2017

6:00 PM EDT Friday, October 6, 2017 until 7:00 AM EDT Saturday, October 7, 2017

6:00 PM EDT Saturday, October 7, 2017 until 7:00 AM EDT Sunday, October 8, 2017

A **Prior Permission Required (PPR)** number is required to land or depart during those times. **To obtain a PPR number, please call 860-625-3814.**

Arrivals during the peak departure period on Saturday, October 7, 2017 from 3:00 PM to 6:00 PM EDT might experience substantial delays. We recommend arriving before or after this time period.

LOCAL TRAINING AND PRACTICE APPROACHES

Local traffic pattern, closed traffic training, and practice instrument approaches **will not be available** at Groton-New London Airport (GON) during the AOPA Fly-In on Friday, October 6, 2017 and Saturday, October 7, 2017.

NO RADIO AIRCRAFT

Due to high density traffic, aircraft operations without a radio are not recommended.

STUDENT PILOTS

Due to high density traffic, solo student pilot operations are not recommended.

NOISE ABATEMENT PROCEDURES

Departing runway 5: Turn left to a heading 020° until reaching 1000 feet MSL. Then turn on course.

Departing runway 23: Turn left to a heading of 210° until reaching 1000 feet MSL. Then turn on course.

CAUTIONS

Possible lengthy delays associated with heavy arrival and departure times. Heavy arrivals expected 8:00 AM—11:00 AM Friday and Saturday. Heavy departures expected 3:00 PM—6:00 PM on Saturday.

Class B Airspace; New York, NY

Class B Airspace; Boston, MA

Class C Airspace; Bradley International Airport (BDL)

Class C Airspace; Providence, RI

Deer, birds, and waterfowl on and near the airport.

GENERAL INFORMATION
GROTON-NEW LONDON AIRPORT

ATIS: 127.0 **GROTON TOWER: 125.6** **GROTON GROUND: 121.65**

Non-movement areas in effect during the following times:

12:00 Noon EDT Thursday, October 5, 2017 until
6:00 PM EDT Saturday, October 7, 2017

Non-movement area includes all surface areas north/northwest of taxiway C including taxiway C as well as portions of closed runway 15/33.

PARKING AREAS

- When operating in the parking areas, pilots are encouraged to be extra alert for taxiing aircraft, aircraft with engine(s) running, and vehicle/pedestrian traffic.
- Marshallers will be assisting aircraft to and from parking areas and run-up areas.
- For safety reasons, high RPM engine running is prohibited in designated parking areas. For departure, it is recommended that pilots conduct their run-up procedures in queue if practical.
- Please review the parking map prior to landing and departure.

VEHICULAR TRAFFIC

Vehicles are not allowed on ramps except those belonging to airport operators and tenants, and exhibitors participating in the AOPA Groton-New London Airport Fly-In.

PRE-FLIGHT PLANNING

- Please ensure that you have reviewed the special flight information, departure procedures, and temporary taxi procedures prior to engine start.
- High density traffic is expected Friday and Saturday morning. Consider arriving during off-peak hours.

DEPARTURE PROCEDURES
GROTON-NEW LONDON AIRPORT (GON)

IFR DEPARTURES

Aircraft desiring to depart IFR should contact Groton Clearance Delivery on **121.65** when Groton Tower is open or Providence Clearance Delivery on **119.85** when the tower is closed. Aircraft should obtain their IFR clearance prior to engine start. When tower is open, advise Groton Ground on **121.65** when ready to taxi.

VFR DEPARTURES

VFR Flight Following: Pilots wanting VFR flight-following should make the request to the appropriate ATC facility. *See below.*

For direction of flight Northwest through Southeast, contact Providence Approach on **119.45** when clear of GON airspace.

For direction of flight West, Southwest, or South, contact New York Approach on **125.97** when at least 10 NM from GON. **DO NOT CONTACT NEW YORK APPROACH UNTIL AT LEAST 10 NM FROM GON.**

VFR Traffic Advisories/Flight Following will be provided on a workload-permitting basis only.

Prior to Start-up: Please ensure that you have reviewed the special flight information, departure procedures, and temporary taxi procedures prior to engine start. Check ATIS on **127.0**.

Engine Start: Locate a marshaller to monitor engine start.

Run-up: If practical, it is recommended that you conduct your run-up while in queue for departure. Please consider propeller blast during your run-up.

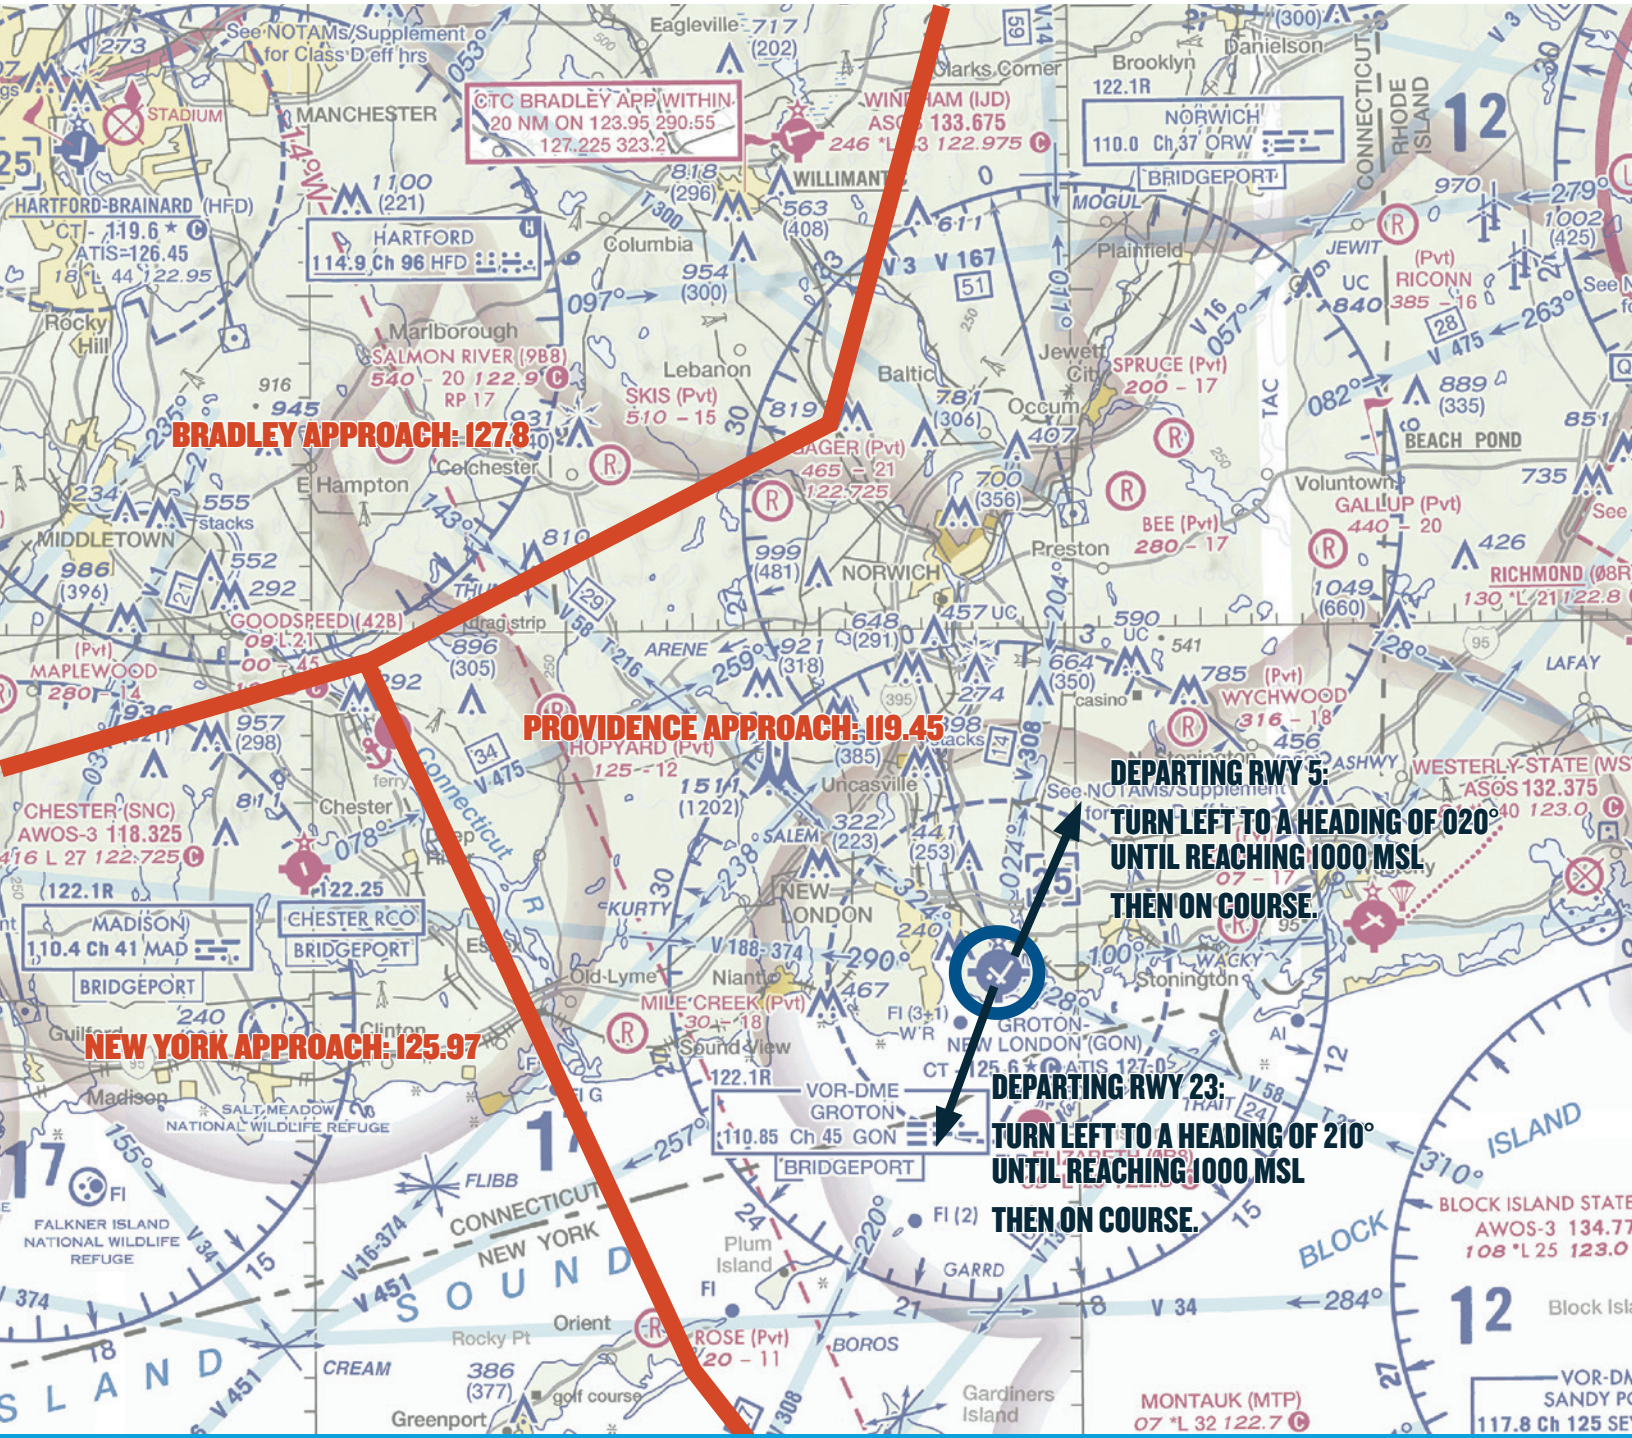

Taxi: Follow instructions from Marshallers and contact Groton Ground on **121.65** when holding short of taxiway C. (Monitor ground control frequency prior to transmitting.)

Departure: Contact Groton Tower on **125.6** when number 1 for departure. Be prepared for immediate take-off.

Departing Runway 5: Turn left to a heading 020° until reaching 1000 feet MSL. Then turn on course.

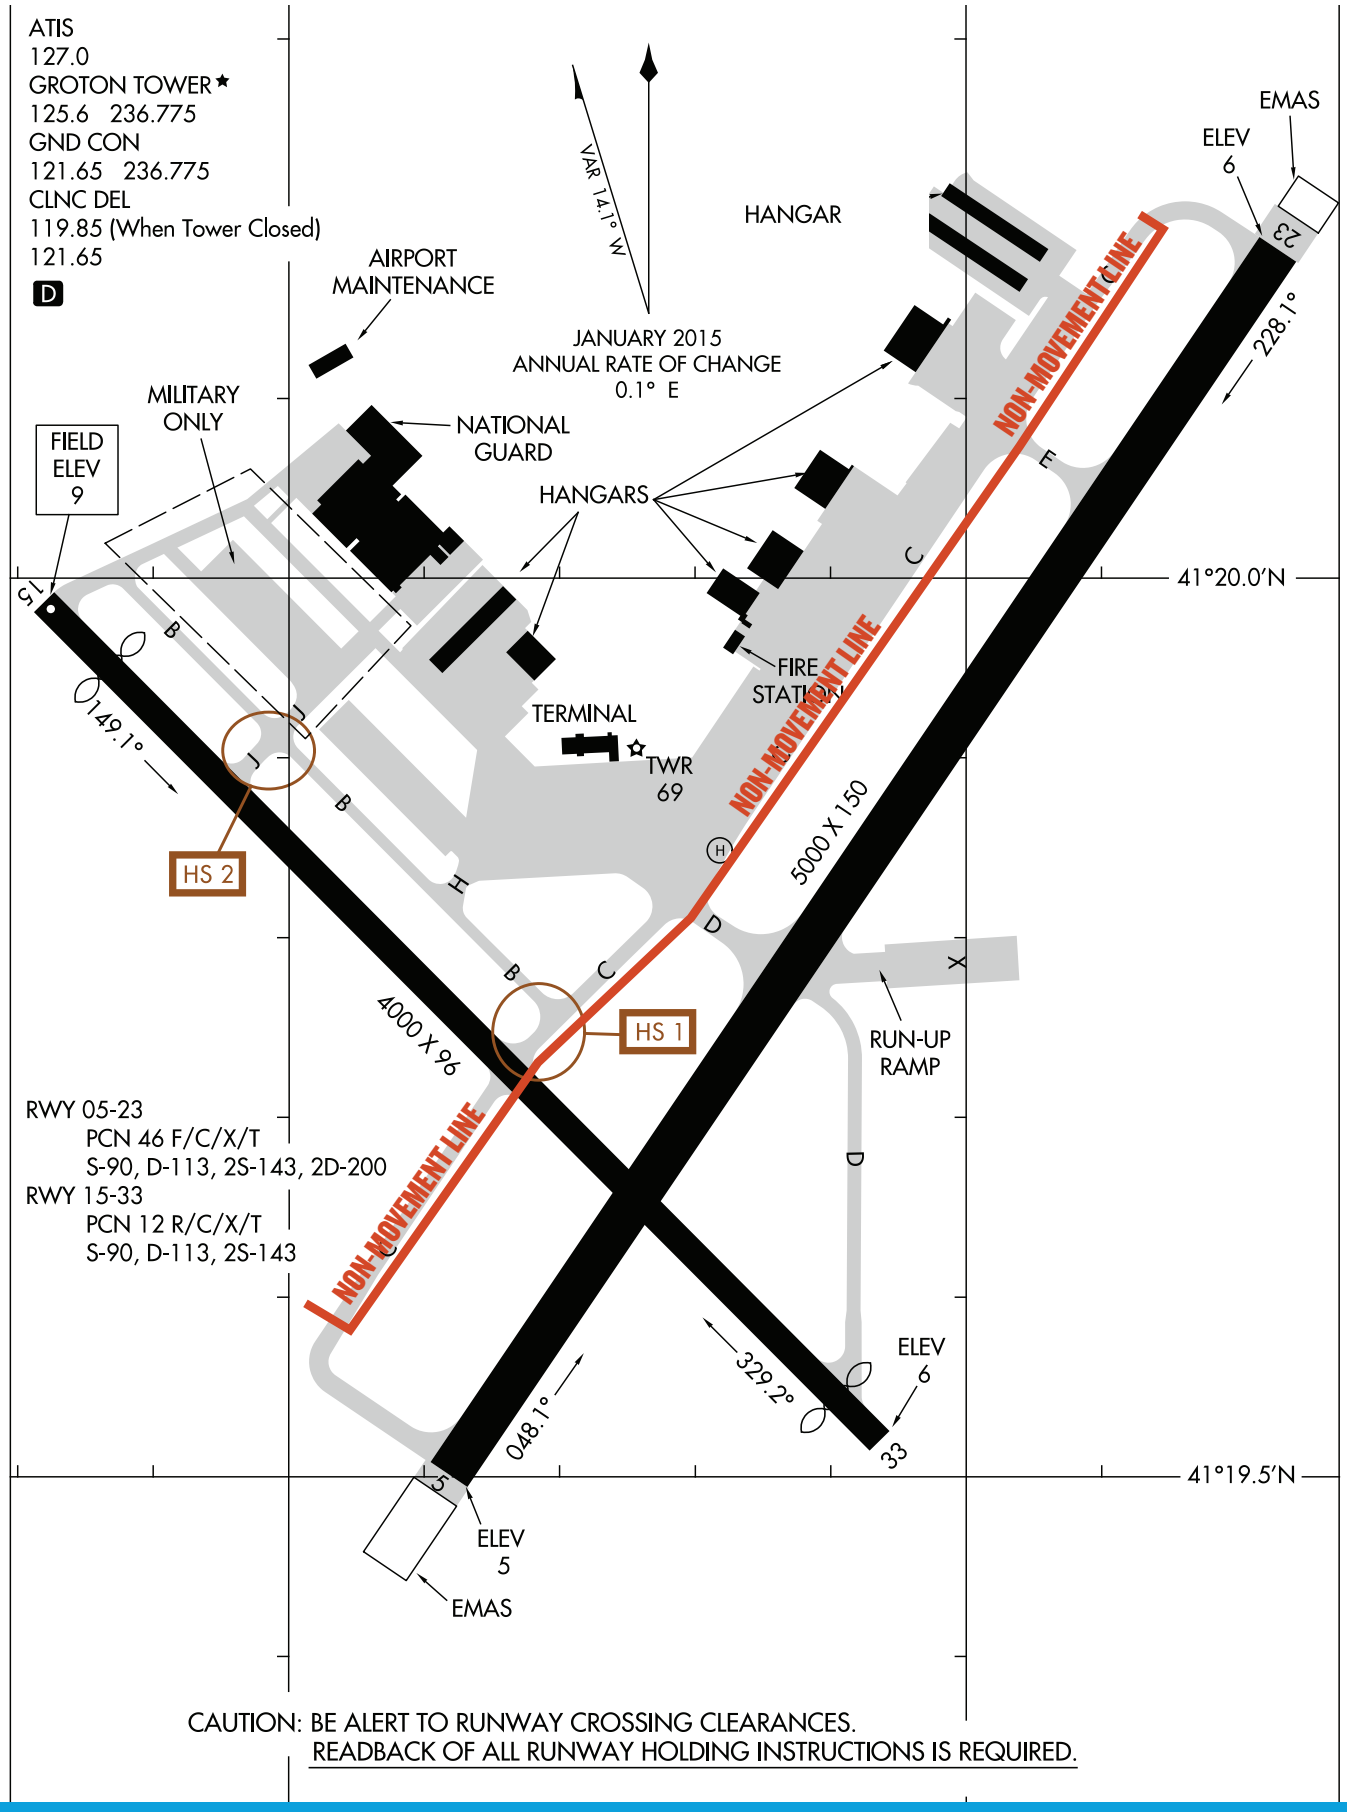

Departing Runway 23: Turn left to a heading of 210° until reaching 1000 feet MSL. Then turn on course.
